

# SAVE THE DATE!

## Making Data Count: Measuring Diabetes and Obesity in Indian Health Systems

Sponsored by IHS Division of Diabetes Treatment and Prevention

**JULY 24-26, 2007**

Westin La Paloma Resort  
Tucson, Arizona

### **WHO SHOULD ATTEND:**

Anyone who works with data addressing diabetes and obesity in Indian health care systems. The conference will provide plenary sessions and concurrent workshops with both clinical and technical applications. All users, new and experienced, will benefit from this Conference.

**REGISTRATION : COMING SOON**

### **PROGRAM OVERVIEW:**

An innovative conference that will provide opportunities for individuals and programs working in Indian health care systems to:

- review current and advanced data systems and analysis tools relevant to diabetes and obesity data
- learn the impact of cost and quality issues
- network and share common issues and best practices for capturing, reporting, using and improving data to help improve the lives of American Indian and Alaska Native people

### **PROGRAM OBJECTIVES:**

- Identify current status of diabetes and obesity data-related issues
- Identify currently available and advanced diabetes and obesity related data systems and analysis tools in IHS, Tribal, and Urban (I/T/U) health care settings
- Discuss data quality issues and the impact on required data reporting, cost accounting and program evaluation
- Network and share ideas on diabetes and obesity related data issues and best practices in unique settings
- Explore opportunities for education, training and career development in data management and program analysis in I/T/U systems
