

“Environmental and Health Consequences Of Clandestine Methamphetamine Laboratories”

Thursday, August 21, 2014

**DOI University and the National Indian Programs Training Center
1011 Indian School Road NW
Classroom No. 234
Albuquerque NM 87104
9:00 AM – 4:00 PM**

***** Registration is free and must be completed by August 1, 2014 *****
<http://www.ihs.gov/EHSCT>

This course offers a unique opportunity to learn about the clinical health effects of methamphetamine use and abuse, the hazards of synthesis, and responder concerns at clean up and remediation of clandestine laboratories. Children's health and exposure considerations will also be presented.

For additional information or questions, please contact:
CAPT Richard Turner at IHS: 505.248.4264 richard.turner@ihs.gov or
Libby Vianu at ATSDR: (415) 947-4319 vianu.libby@epa.gov

Sponsored by:

- * Indian Health Service (IHS)
Environmental Health Support Center**
- * Agency for Toxic Substances and Disease Registry (ATSDR)**
- * American College of Medical Toxicology (ACMT)**

Environmental and Health Consequences of Clandestine Methamphetamine Laboratories

The course is being presented by the American College of Medical Toxicology (ACMT), through an Inter Agency Agreement with Indian Health Services (IHS) and Agency for Toxic Substances and Disease Registry (ATSDR).

Course Description:

This course offers a unique opportunity to learn about the clinical health effects of methamphetamine use and abuse, the hazards of synthesis, health effects of methamphetamines, and clean up and remediation of clandestine laboratories. Children's health and exposure considerations will also be presented.

The ACMT faculty members are board certified and fellowship trained physician medical toxicologists. They have extensive experience directly caring for patients suffering from the ill effects of chemical agents and poisons. For more information about ACMT please visit their web-site at <http://www.acmt.net/index.html>.

Target Audience:

The audience will include law enforcement, emergency physicians and medical technicians, public health and environmental professionals, social services providers, HAZMAT professionals, first responders, public policy professionals and others who may work on issues related to clandestine methamphetamine laboratories.

Topics:

1. Clandestine Methamphetamine Laboratories: What are the Issues?
2. Methamphetamine Neurotoxicity.
3. Chemical Hazards of Meth Lab Seizures: Managing Patients Brought from the Scene
4. Evaluation of the Most Vulnerable Population: Children Exposed to Methamphetamine.
5. Protection and Monitoring of Personnel Involved in Laboratory Seizure and Clean-Up.
6. Field Detection and Environmental Consequences of Clandestine Laboratory Clean Up.
7. Tribal Law Enforcement Perspectives.
8. Treatment of Patients with Methamphetamine Addiction.

Learning Objectives:

1. Describe the state of methamphetamine use and clandestine meth laboratories in the US.
2. Identify the clinical effects of meth and describe the management of acute and chronic toxicity.
3. Describe the law enforcement perspective on methamphetamine in the community.
4. Describe the chemical hazards of methamphetamine synthesis.
5. Identify personal and environmental protection equipment to be used by first responders.
6. Identify the modalities available to treat victims of the clandestine meth lab exposure.
7. Identify the occupational monitoring requirements for responders.
8. Identify the special features to be considered for the evaluation of children found at the scene.
