Document Revision History

Date of Change	Location of Revision	Revision
April 2008	Entire document	Added information for the Well-child Module (WCM)

Preface

This document contains the technical manual for Well-Child Module for the IHS RPMS New Encounter Form and Health Summary Package (PCC+) version 2.6. Installation and user manuals are also provided with this installation package.

Security

The reports generated by this package contain confidential patient information,

This package does not impose any additional legal requirements on the use, nor does it relieve the use of any legal requirements.

This package requires access and verification code to access the system. These can be obtained from your supervisor or site manager. In addition, security keys are assigned with your access codes. They are required to perform certain options in the CPHAD application. Some options within the application are “locked,” i.e., the user is unable to access the option without the appropriate security keys.

1.0 Introduction

The PCC+ Encounter Form and Health Summary package (VEN) enables PCC users to design and generate highly customized encounter forms and health summaries on a laser printer. These encounter forms combine features of the traditional PCC encounter form, super bill, and health summary. Customized elements of the form come from the PCC database (demographic information, eligibility data, problems, purposes of visit, allergies, health maintenance reminders, and medications), a site preference file (orderables and associated CPT codes) a user preference file (diagnoses and associated ICD9 codes), and the PCC+ knowledgebase.

1.1 Background

The PCC+ package is unique in a variety of ways. From a technical perspective, most of the actual computing is done outside of the traditional M/PCC environment. In addition, the PCC+ requires a great deal of customization to reflect user and site preferences. Finally, most of the computing is done by background processes in both the MUMPS and Windows environment. There are only a few foreground processes, and all of these are brief. Consequently, package maintenance for PCC+ will be more complex than is typically seen with other RPMS applications.

This is the fourth release of PCC+. It is an optional extension for PCC+ Version 2.5. Its functionality is focused on a single clinical domain: Well-Child Care from birth to age 21. While the clinical scope of this release is limited, the functional scope has been extended to include synchronized enhancements for other RPMS modalities including traditional PCC and GUI based platforms like the Electronic Health Record (EHR).

1.2 Technical Foundation

The basic functionality of PCC+ is to provide a comprehensive link between the PCC+ database and Microsoft Word(R). This is primarily accomplished through a Word feature called mail merge. Normally, mail merge is used to create form letters by imbedding database “fields” into a document. A mail merge field is a link to a particular location in the database. A typical form letter may contain 5-10 fields. The new encounter forms may contain thousands of fields.

The process of generating an encounter form or health summary has five stages:

- Patient check-in
- PCC data extraction
- Data transmission to the print server
- Document generation

- Document spooling and printing

The overall process is complicated by background processing, multiple servers/operating systems, and complex connectivity issues.

Background jobs serve two functions:

- They improve the performance of the check-in process.
- They buffer the output of the data extraction process to prevent the Print Service from being overloaded.

PCC+ requires that two separate servers, each running a different operating system, must work in concert to generate documents:

- The traditional RPMS server—typically a UNIX RISC or Windows NT box running on MSM (Version 4.3.1 or higher) OR Caché (Version 5.0.0 or higher). Note to MSM users: Although PCC+ currently runs under MSM, we cannot guarantee that this will always be true in the future. The MSM operating system is no longer supported by InterSystems, it is no longer approved by OIT, and its use no longer supported in many RPMS applications.
- A print server (or servers)—a new Windows 2000/XP PC running Office 2000/2003 and the PCC+ print service.

Finally there must be reliable, fast network connectivity to ensure the following:

- The RPMS server must have a bi-directional LAN, TCP/IP connection to the print server.
- The print server must have network connections (LAN/WAN, TCP/IP) to all printers that generate encounter forms.

The print server must continuously run FTP and Ultra@VCN (remote control service) so that the system can be upgraded and checked remotely by support personnel. The RPMS server must also have FTP accessibility so that PCC+ files can be loaded into the MUMPS database.

1.3 Multi-Facility Capability

PCC+ is capable of servicing multiple facilities simultaneously provided that all of those facilities share the same RPMS server and print server. TCP connectivity makes it possible to print documents anywhere within the IHS firewall.

1.4 What's New in Release 2.6

PCC+ version 2.6 offers PCC+ users the following new features for well-child care:

- It supports dozens of mail merge fields related to well-child care.

- It shares a common set of rules and guidelines with three other RPMS modalities: traditional PCC (using health summary extensions), the EHR and non-EHR components for the desktop of clinical workstations. Rules and guidelines are stored in a Knowledgebase that currently holds over 4000 entries for well-child care.
- It includes an “intelligent”, highly efficient data entry mnemonic to capture PCC+ data.
- It includes Knowledge Management tools to organize and use numerous guidelines and rules associated with well-child care.
- It supports and integrates the Ages and Stages Questionnaire (ASQ), a standard instrument for monitoring childhood development.
- It includes a new version of the PCC+ print service that does a better job of protecting available memory for reliable document processing.
- It includes miscellaneous medication list fixes: If an adverse reaction was cancelled, it would still appear on the Rx remarks. If there was not enough room to print all medications on the PCC+ form, a warning message might not appear. Both issues were resolved in v2.6.

1.5 Structural Overview

All PCC+ routines, globals, files, options, and keys are in the official namespace VEN. Files are in the numberspace 19707.01-19707.99. All PCC+ FileMan globals use the open reference (^VEN(7.xx,. For example, the file 19707.94 uses the open reference ^VEN(7.94,. Temporary globals use the open reference ^TMP("VEN xxx...",\$J,. The code for the new data entry mnemonic is stored in ^APCDTW*, and the code for the new health summary component is stored in ^APCHS6B. The new code to support ASQ measurements is stored in ^AUPNVMSR and ^AUPNVMS2. A new V file, V WELL CHILD (^AUPNVWC(9000010.46) was created to store well-child exam results. The V PATIENT ED file (^AUPNVPED(9000010.16) was extended to include subtopics.

2.0 System-Wide Variables

There are no system-wide variables in the VEN v2.6 package.

3.0 Packaging

PCC+ is distributed as a standard KIDS package. All routines and inits are in the file ven_0260k.

Note: Beta versions of the software have slightly different file names: ven_0260.txk—where “x:” is the beta release number.

4.0 Routines

4.1 PCC+ Routine List

VENPCC	VENPCC2	VENPCCIC	VENPCCM1	VENPCCOH	VENPCCS1

4.2 Routines with Descriptions

Routine	Description
VENPCC	CHECK IN MODULE FOR USE WITH THE PRINT SERVER
VENPCC1	CREATE THE PCC+ ENCOUNTER FORM AND HEALTH SUMMARY
VENPCC10	CREATE THE PCC+ ENCOUNTER FORM AND HEALTH SUMMARY
VENPCC1A	ENCOUNTER FORM DATA MINING
VENPCC1B	MORE ENCOUNTER FORM DATA MINING
VENPCC1C	MORE DATA MINING FOR ENCOUNTER FORMS
VENPCC1D	HEALTH MAINTENANCE REMINDERS FOR ENCOUNTER FORMS
VENPCC1E	NEW HEALTH MAINTENANCE REMINDER OUTPUT
VENPCC1F	SURGICAL, PERSONAL FAMILY HISTORY
VENPCC1G	VERSION 2 EXTENSIONS

Routine	Description
VENPCC1H	MORE ENCOUNTER FORM DATA MINING
VENPCC1K	SPECIAL DISPLAY OF PROBLEMS AND POVS
VENPCC1L	CASE MANAGEMENT COMMENTS AND ADVERSE REACTION TRACKING
VENPCC1M	PATIENT MEASUREMENTS
VENPCC1N	DISPLAY LAB TEST RESULTS
VENPCC1P	ICD PREFERENCES FOR v2.5
VENPCC25	HEADER MANAGEMENT FOR v2.5
VENPCC2	HEALTH SUMMARY GENERATOR
VENPCC2A	HEALTH SUMMARY GENERATOR
VENPCC3	CHECK-IN UTILITIES
VENPCCA	CHECK IN MODULE FOR USE WITH THE PRINT SERVER
VENPCCAM	GET MEASUREMENTS - USED IN NURSE CHECK IN MODULE
VENPCCC	CHECK LIST MANAGER
VENPCCC1	CHECK LIST EDITOR
VENPCCD	UPDATE DEMOGRAPHICS AND INSURANCE INFO
VENPCCD1	PATIENT DEMOG UPDATE - CONTINUATION
VENPCCG	GET ICD PREFERENCES
VENPCCG1	GET ICD PREFERENCES: SORTER
VENPCCG2	GET ICD PREFERENCES: FILER
VENPCCG3	GET ICD PREFERENCES
VENPCCG4	EXPORT ICD PREFERENCES FROM EXCEL BACK TO THE USER PREFERENCE FILES
VENPCCIC	CLINIC CONFIGURATION DIALOGUE
VENPCCID	CONFIG FILE MANAGEMENT DIALOGUE
VENPCCIT	TEMPLATE PREFERENCES DIALOGUE
VENPCCIX	EXTENSIONS OF TEMPLATE PREFERENCES DIALOGUE
VENPCCK	KNOWLEDGEBASE MANAGEMENT: PRIMARY ROUTINE
VENPCK1	KNOWLEDGEBASE EDITOR

Routine	Description
VENPCCKB	KNOWLEDGEBASE PATIENT EDUCATION TOPIC MANAGER
VENPCCKD	KB TRANSACTION FILE FLUSHER
VENPCCKG	RPCS ENTRY POINTS FOR THE KB GUI EDITOR
VENPCCKT	TRANSACTION MANAGER FOR WELL CHILD EXAMS AND PT ED
VENPCCKX	KB TRANSACTION FILE POPULATOR
VENPCCM1	MANAGE SYSTEM SYNCHRONIZATION PRINT DEAMON
VENPCCM2	MANAGE SYSTEM SYNCHRONIZATION PRINT DEAMON
VENPCCM3	PRINT GROUP SYNCHRONIZATION
VENPCCM4	MANAGE TEMPLATE SYNCHRONIZATION AND VALIDATION
VENPCCMA	USER PREFERENCE MANAGER FOR DIAGNOSES AND ICD CODES
VENPCCMB	SITE PREFERENCE MANAGER
VENPCCMC	PCC+ INSTALLATION CHECKER
VENPCCMD	USER PREFERENCE MANAGER FOR DIAGNOSES AND ICD CODES
VENPCCME	PCC+ ENVIRONMENT CHECKER
VENPCCMF	QUEUEING FILE VIEWER
VENPCCMG	USER PREFERENCE MANAGER FOR DIAGNOSES AND ICD CODES
VENPCCMH	GLOBAL MANAGEMENT OF DIAGNOSES AND ICD CODES
VENPCCMI	INSTALLATION UTILITIES FOR ENCOUNTER FORMS AND PRINTER GROUPS
VENPCCML	USER PREFERENCE MANAGER FOR DIAGNOSES AND ICD CODES
VENPCCMP	SITE PREFERENCE MANAGER
VENPCCMX	PRINT DEAMON MONITOR
VENPCCOH	DISPLAY VEN OPTION HEADER
VENPCCP	PRINT DEAMON - MANAGE BACKGROUND PRINTING
VENPCCP1	FACILITY PRINT DEAMON
VENPCCP2	PRINT DEAMON - MANAGE ERRORS
VENPCCP3	PRINT DEAMON - MANAGE ERRORS, MISC. ASMU OPTIONS

Routine	Description
VENPCCQ	KNOWLEDGEBASE UTILITIES FOR PCC+
VENPCCQ1	KNOWLEDGEBASE UTILITIES FOR ASQ GUI DATA CAPTURE
VENPCCQA	POST INIT SUPPLIMNET
VENPCCQB	POST INIT SUPPLIMNET
VENPCCQC	POST INIT SUPPLIMNET
VENPCCQD	POST INIT SUPPLIMNET
VENPCCQP	POST INIT SUPPLIMNET
VENPCCQX	CONFIGURATION MANAGER/POST INIT
VENPCCQY	CONFIGURATION INITIALIZER/PRE-INIT
VENPCCQZ	CONFIGURATION MANAGER/POST INIT
VENPCCS1	POPULATE OCX OBJECTS
VENPCCS2	POPULATE OCX IMMUNIZATIONS OBJECT
VENPCCS3	COLLECT ANF FORMAT DATA FOR PCC+ GRAPHS
VENPCCU	PCC+ UTILITIES USED BY MANY ROUTINES
VENPCCX	EXTERNAL CALL TO PCC+ DATA EXTRACTOR, EMU PATCH
VENPCCW	INTERFACE TO THE GUI SCHEDULING PACKAGE
VENKI*	INIT ROUTIES USED TO PROVIDE FILE CONTENT DURING THE POST INIT PROCESS

5.0 PCC+ Options

Option	Description
VEN 2 EDIT ICD PREFERENCES	Edit ICD preference file (phased out in v2.5)
VEN 2 EDIT ORDERABLES	Edit CPT preferences (phased out in v2.5)
VEN 2 GLOBAL DX EDIT	Edit all POV text and ICD codes (phased out in v2.5)
VEN 2 LIST ICD PREFERENCES	List all POV/ICD preferences (phased out in v2.5)
VEN 2 NO VISIT	Generate a PCC+ form without creating a visit
VEN ADD A CLINIC	Add a PCC+ clinic (phased out in v2.5)
VEN ADD PRINT GROUP	Add a Print Group (phased out in v2.5)
VEN CHECK ENVIRONMENT	Check PCC+ environment
VEN CHECK QUEUE TYPE FILE	Check Queue Type file
VEN CL ADD CHECKLIST TO FORM	Associate a checklist and a PCC+ form
VEN CL ADD ITEM TO CHECKLIST	Add an item to a checklist
VEN CL ADD NEW CHECKLIST	Create a new checklist and define its properties
VEN CL ADD NEW ITEM	Add a new item to a checklist and define its properties
VEN CL DELETE ITEM FROM CHECKLIST	Remove an item from a checklist.
VEN CL DELETE ITEM	Delete an item from the master list
VEN CL EDIT ITEM	Edit the properties of an existing item
VEN CL GLOBAL CPT CHANGE	Globally change a particular CPT code across the entire list of items
VEN CL INITIALIZE CHECKLISTS	Convert orderables and order sets (v2.2) to checklists (v2.5)
VEN CL REMOVE CKLIST FROM FORM	Disassociate a checklist from a PCC+ form
VEN CL VIEW CHECKLIST	View the current checklists and their properties
VEN CL VIEW ITEM	View all the items and their properties
VEN CLONE ICD PREFERENCES	Copy a set of ICD preferences from user A to user B. (This option has been updated to work with v2.5 preference lists)
VEN CLONE ORDERABLE SET	Clone Orderable Set (This option has been updated to work with v2.5 preference lists)
VEN CREATE SCHEDULING PKG LINK	Create Scheduling Package link
DEFINE A TEMPLATE	Access the dialogue to create and define a PCC+ encounter form (New in v2.5)

Option	Description
DEFINE CLINIC PROPERTIES	Access the dialogue to create and define a PCC+ clinic (New in v2.5)
VEN DELETE A CLINIC	Delete a clinic (phased out in v2.5)
VEN DELETE ICD PREFERENCES	Delete a user's ICD preferences(phased out in v2.5)
VEN DELETE ORDERABLE SET	Delete an Orderable Set (phased out in v2.5)
VEN E BLOCK OFF	Resume the generation of PCC+ forms at a specific clinic
VEN E BLOCK ON	Resume the generation of PCC+ forms at a specific clinic
VEN E CLEANUP OFF	Turn off the automatic cleanup of "z" files (files that failed to generate a PCC+ encounter form) each night
VEN E CLEANUP ON	Turn on the automatic cleanup of z files (files that failed to generate a PCC+ encounter form) each night
VEN E MAX Z FILES	Specify the maximum number of z files that can be stored in the \print folder
VEN E MENU	PCC+ Advanced System Management Menu (from v2.2)
VEN E PRINT ERROR LOG	Print PCC+ errors for a specific time period
VEN E PRINT ERROR SOLUTION	Print help/solutions for specific errors
VEN EDIT ENCOUNTER FORM	Add/edit encounter form (phased out in v2.5)
VEN EDIT ICD PREFERENCES	Edit ICD Preferences (was phased out in v2.2)
VEN EDIT ORDERABLES	Edit Orderables (was phased out in v2.2)
VEN EDIT PRINT GROUP	Add/edit print group
VEN EF GENL DESCRIPTION	View EF genl. Descriptions
VEN EF TECH DESCRIPTION	EF tech description
VEN GET USER PREFERENCES	Extract Preferences from PCC Database
GLOBAL ICD EDIT	Edit master list of POV/ICD preferences
VEN HEADER SYNC	Synchronize header files (phased out in v2.5)
VEN IMPORT ICD PREFERENCES	Import ICD Preferences from Excel
VEN L COPY LAB TESTS	Copy a set of lab tests from one PCC+ form to another
VEN L DELETE LAB TESTS	Delete all lab tests from a PCC+ form
VEN L MAIN LAB TEST MENU	Access lab test configuration utilities
VEN LIST PRINT GROUPS	List print groups
VEN MGR	Manager's main menu for the Encounter Form Package

Option	Description
VEN MONITOR CHECK-IN QUEUE	Monitor the Check-In Queue
VEN MONITOR PRINT DEAMON	Monitor Print Deamon
VEN NURSE CHECK IN	Access the nurse check-in dialogue
VEN PCC+ SYSTEM CHECK	Comprehensive system check (phased out in v2.5)
VEN PRINT	Main print menu for ILC encounter form package
VEN PRINT ALL	Print Encounter Form, Health Summary, Outguide
VEN PRINT CHECKIN LIST	Print check in list
VEN PRINT DEMO	Print Demo (for learning only)
VEN PRINT ENCOUNTER FORM	Print Encounter Form
VEN PRINT GROUP SYCH	Synchronize print groups
VEN PRINT HEALTH SUMMARY	Print Health Summary
VEN PRINT OUTGUIDE	Print OutGuide in Medical Records
VEN RPC	This is a "BROKER" type option that stores all the RPCs for the WCM. The RPC are used by the GUI extensions.
VEN REPRINT FORM	Reprint form
VEN RESTART	Reset and restart PCC+
VEN SET CONFIG FILE PROPERTIES	Access the dialogue to set up and maintain the PCC+ configuration file
VEN SHUT DOWN PS	Rapid shut down or restore a print server.
VEN START PRINT DEAMON	Start Print Deamon
VEN STOP PRINT DEAMON	Stop the Print Deamon
VEN TEMPLATE SYNC	Synchronize templates
VEN UPDATE DEMOGRAPHICS ONLY	Update demographics only
VEN WCM ACTIVATE DOMAIN	Activate (or inactivate) A Knowledgebase Domain
VEN WCM MODULE CHECK UP	Comprehensive checkup of the entire -WCM. Also used control WCM access privileges. Runs automatically during the post init process.
VEN WCM CONVERT TEMPLATES	Convert an old style well-child template definition so it can display new knowledgebase items. The definition is stored in the VEN EHP EF TEMPLATES file
VEN WCM PLACE BROKER OPTION	Pace the broker option VEN RPC on a menu (User must have access to the menu to use the RPCs in the broker option. Without this GUI controls cannot be used!)

Option	Description
VEN WCM START OR STOP BROKER	Control BMX Broker for WCM desktop components
VEN DELETE TEST VISIT	Delete a test visit from RPMS. This option will also clean out associated V file entries and the VEN QUEUE entry.
VEN PRINT EHR VISIT	Print a PCC+ form for a patient checked-in using the EHR. EHR measurement results will appear on the PCC+ form.
VENMENU	New Encounter Form – Main menu
VEN_CHECKLIST MANAGEMENT	Menu for checklist options
VEN_ICD	Menu for ICD preference management
VEN_INSTALL	PCC+ Installation Menu
VEN_LAB	Menu for lab test management
VEN_MGR	PCC+ Manager's menu
VEN_PRINT	PCC+ Print menu
VEN WCM_MENU	WCM manager's menu to access the VEN WCM options

6.0 Files and Tables

6.1 File List

File Number	File Name	Description
19707.1	VEN EHP ICD PREFERENCES	This file contains the preferred diagnoses for individual providers and provider groups for eight demographic categories. It should not be edited directly. Instead, use the user preference editor: ^VENPCCMD.
19707.11	VEN EHP KB CATEGORY	Stores knowledgebase categories (Updated in v2.6)
19707.12	VEN EHP KB ITEM	Stores knowledgebase items
19707.13	VEN EHP KB CLINICAL DOMAIN	Stores knowledgebase domains (Added in v2.6)
19707.14	VEN EHP ASQ QUESTIONNAIRE	Stores the properties of the ASQ questionnaires (Added in v2.6)
19707.15	VEN EHP ASQ TRANSACTION	Transaction file used when ASQ results are updated via the GUI (Added in v2.6)
19707.16	VEN EHP KB TRANSACTION	Transaction file used when KB items are updated via GUI KB tools (Added in v2.6)
19707.2	VEN QUEUE	Stores info about all queues - both people and paper. (Updated in v2.6)
19707.22	VEN QUEUE TYPE	Stores types of queues - both people and paper. (Updated in v2.6)
19707.33	VEN EHP ICD GROUP	Stores ICD preference sets (v2.5)
19707.34	VEN EHP ICD ITEM	Stores ICD items and their properties (v2.5)
19707.4	VEN EHP PRINTER GROUP	This file contains printer groups used by the encounter form print service. Each printer group is associated with one or more departments.
19707.41	VEN EHP EF TEMPLATES	This file holds information about the encounter form templates used at this facility.
19707.42	VEN EHP HEADER FIELD	This file contains a list of mail merge header names for each PCC+ header file. This file should not be edited.

File Number	File Name	Description
19707.47	VEN EHP MOJO DE FMT UHC	Stores properties of data grids used in PCC+ GUI components (hidden fields) (Added in v2.6)
19707.48	VEN EHP MOJO DE FMT GRID	Stores formatting properties of PCC+ GUI components (Added in v2.6)
19707.49	VEN EHP HEADER GROUP	Stores header sets. Replaces the header files found through v2.2.
19707.5	VEN EHP CONFIGURATION	Contains configuration parameters for PCC+
19707.61	VEN EHP OCX DATA ELEMENTS	OCX data elements for the old well-child form (phased out in v2.5)
19707.62	VEN EHP OCX COMPONENTS	OCX components for the old well-child form (phased out in v2.5)
19707.63	VEN EHP RESULT GRAPH	Stores properties of PCC+ graphs
19707.7	VEN EHP ERROR LOG	This file contains a list of errors that occurred somewhere in the PCC+ form generation process. This file should not be edited directly. It is automatically updated by the PCC+ routines.
19707.71	VEN EHP ERROR TYPE	Stores the error types and related solutions
19707.8	VEN EHP AUDIT TRAIL	This file stores the records of all health summary requests generated by the PCC+ check-in process. It allows site managers to track authorized and unauthorized requests for patient information. This file should not be edited directly. It is automatically updated by the PCC+ check-in process.
19707.9	VEN EHP CHECK LIST	Stores PCC+ checklists and their properties
19707.91	VEN EHP CHECKLIST ITEM	Stores checklist items and their properties
19707.92	VEN EHP ORDERABLE SET	Stores orderable sets (phased out in v2.5)
19707.93	VEN EHP ORDERABLES	This file contains a set of site preferences for 4 demographic groups. It should never be edited directly but rather via the user preference editor ^VENPCCMP. (Phased out in v2.5)

File Number	File Name	Description
19707.94	VEN EHP TICKLERS	This file contains items that are printed in the review of systems box on the PCC+ encounter form.
19707.95	VEN EHP CLINIC	Each department (clinic stop) may have one or more 'clinics'. The clinic is the lowest common denominator location in the facility. For example, 'LACTATION CLINIC' may be a clinic of 'GYNECOLOGY' department. (Updated in v2.6)
19707.96	VEN EHP SURVEILLANCE ITEM	Stores special information about certain health maintenance reminders. Enables extended reminders that contain last date and result.
19707.98	VEN EHP ORDERABLE CLASS	This file contains a list of valid orderable classes, such as lab tests, exams, and so on. It should never be edited. (Phased out in v2.5)

Note: Rows for files printed in black text are unchanged from the original PCC+ Version 2.5 release. Rows for files printed in blue have been updated since the release of Version 2.5. Rows for files printed in red are new and were added in Version 2.6.

The following non-PCC+ files have been created or modified to support PCC+ v2.6.

File Number	File Name	Description
9000010.46	V WELL CHILD	New file to store well-child exam findings
9000010.16	V PATIENT ED	Stores patient education topics – modified to include subtopics

The content of the following non-PCC+ files has been updated to support PCC+ v2.6, but the file definitions are unchanged: BMX AD SCHEMA, RPMS PCC DATA ENTRY CONTROL, MEASUREMENT TYPE, HEALTH SUMMARY MEAS PANEL, and HEALTH SUMMARY COMPONENT.

6.2 File Access

The following table indicates Read, Write, Laygo, Data Dictionary, and Delete access security for all VEN files.

7.2 Published Entry Points

There are no published entry points in the VEN v2.6 package.

7.3 Exported Options

There are no exported options in VEN v2.6 package.

8.0 Security Considerations and Keys

Access to PCC+ is initiated via standard RPMS Access/Verify codes. Use of specific PCC+ functions is controlled in the standard way via Kernel Security Keys and Menu options (see below). Access to PCC+ functions via its single API is controlled in the same way. Namely, users calling PCC+ from outside applications (via the PCC+ API) must hold all the required PCC+ security keys, or access to specific PCC+ functions will be denied.

PCC+ is, for the most part, a “read only” application. Information is drawn from the RPMS database, reformatted, and printed in Word documents. Once a form is printed, it should be handled like any other document containing secure patient information. There are three notable exceptions to PCC+’s read only convention. First, the PCC+ nurse check in module is used to enter chief complaint and vital signs. Second, the ASQ desktop component is used to view and enter ASQ scores. Third, the well-child module contains an extension to the RPMS data entry system that streamlines the process of data entry. This last function is fully integrated into the Data Entry Module and is subject to all of that module’s security and quality controls.

The primary PCC+ application resides on the RPMS server. When a PCC+ form is generated, a data set is passed via the local area network as a text file to the PCC+ print server(s). This data set contains confidential patient information and is subject to whatever security protection is provided by the LAN and its network environment. This data set is analogous to any other patient information passed over the LAN for viewing in a telnet session on a client.

Once the data set reaches the print server, it is used to generate a word document and then deleted. No patient data is stored on the print server for more than a few seconds. We recommend that each print server be located in a secure place; i.e., the site’s computer room. Moreover, each print server should be subject to the same network security protection mechanisms and policies as the RPMS server.

PCC+ contains an audit file: VEN EHP AUDIT TRAIL. This file automatically stores every PCC+ transaction: who requests the document and which patient was selected. A similar file, VEN QUEUE, is used to track patients admitted using PCC+.

The WCM is the first PCC+ release to include desktop components. One of these, the ASQ component, is used to view and record confidential patient information. All PCC+ desktop components can only be accessed via a standard access/verify login process. In addition, the user must hold the required security keys or access will be denied. Access is mediated through the standard security processes related to Remote Procedure calls. Namely, each RPC requires that the user have access to a specific “broker” type option attached to a menu on the user’s menu tree. If the user does not have a security key to allow access to the broker option, then the user will not be able to initiate the RPC via the user interface. Site managers can update the security key requirements of any PCC+ option (including broker options) as they see fit. Basic security configuration is included in PCC+ standard post install process.

Security Key	Description
VENZCKIN	Key required to access the PCC+ check in dialogue
VENZKBEDIT	Key required to edit the Knowledgebase
VENZMENU	Key to NEW ENCOUNTER FORM Menu
VENZMGR	Key to access the PCC+ Managers Menu
VENZPRINT	Key to VEN print options
VENZSCH	Holders of this key can generate PCC+ Encounter Forms via the IHS Scheduling Package check-in process.

Broker Option	Description
VEN RPC	Required to access all WCM desktop components
BMXRPC	The broker option of BMX.net. “BMX” is the underlying application used by PCC+ to connect the RPMS database to Windows desktop components.

9.0 Archiving and Purging

There is no archiving and purging in this package.

10.0 Technical Information about WCM Desktop Components

All source files have been provided to OIT.

10.1 Ven 0260 Client

The WCM client includes the following:

- The naming conventions for this application are consistent with the .NET framework.
- Microsoft Visual Studio 2005 version 8.0.50727.42 was used to develop this application. The application is Microsoft .NET Framework 2.0 based (developed with version 2.0.50727) and is implemented using C#.
- The application's installer uses the NullSoft Scriptable Installation System, a popular and widely used install-maker tool for the Windows platform. The tool and its source code can be downloaded from <http://nsis.sourceforge.net>.
- The PDF generation facility is from the iText family of open-source PDF generation libraries, the industry leader. iText# version 3.1.6 is used by this application. The library and source-code can be downloaded from <http://sourceforge.net/projects/itextsharp>
- This application communicates with RPMS using the IHS/OIT BMX Broker version 2.0.2370.20957.
- The Infragistics GUI libraries 6.3 are used in this application. The royalty free distribution license is provided by Infragistics. Developer licenses and source-code can be purchased from the manufacturer at <http://www.infragistics.com>.
- This application does not provide any special 508 compliance features nor functionality above and beyond the standard Windows operating system and .NET Framework capabilities.
- This application does not have, nor register, any COM objects.
- This application's .NET assemblies developed for IHS/OIT uses the IndianHealthService namespace.
- All files and persistent artifacts are located in three places:
 - The installation directory which is hardwired to c:\Program Files\ILC\ILC Forms Print Service\WCM.
 - The user settings directory which is on the system drive \Documents and Settings\<User>\Application Data\IndianHealthService\WellChildModule.

- A single temporary PDF file is generated in the Windows temp directory for every ASQ form. The PCC+ASQ application deletes all temporary ASQ form PDF files from the Windows temp directory when it is initially opened.

10.2 Ven 0260 Print Service

The WCM print service includes following:

- The naming conventions for this application are consistent with the .NET framework.
- Microsoft Visual Studio 2003 version 7.1.3088 was used to develop this application. The application is Microsoft .NET Framework 1.1 based (developed with version 1.1.4322 SP1) and is implemented using C#.
- The application's installer uses the NullSoft Scriptable Installation System, a popular and widely used install-maker tool for the Windows platform. The tool and its source code can be downloaded from <http://nsis.sourceforge.net>.
- The logging facility is from the log4 family of open-source logging libraries, the industry leader. Log4net version 1.2.9.0 is used by the print service. The library and source-code can be downloaded from <http://logging.apache.org/log4net/>.
- The print service drives Microsoft Word 2000 and 2003 using the Word 2000 or Word 2003 COM objects and .NET interoperability libraries. A compatible version of Microsoft Word must first be installed on the target system.
- This application communicates to RPMS using the IHS/OIT BMX Broker version 2.0.2370.20957.
- This application does not provide any special 508 compliance features or functionality above and beyond the standard Windows operating system and .NET Framework capabilities.
- This application does not have, nor register, any COM objects.
- This application's .NET assemblies developed for IHS/OIT uses the IndianHealthService namespace.
- All files and persistent artifacts are located in the installation directory and its subdirectories under C:\Program Files\ILC\ILC Forms Print Service.
 - The application must have rights to read/write/delete files. The user settings directory which is on the system drive \Documents and Settings\<User>\Application Data\IndianHealthService\WellChildModule.

11.0 Generating Online Documentation

This section describes a few methods to generate system technical documentation. Online technical documentation can be generated through the use of several Kernel options. These include, but are not limited to, the following:

- %INDEX
- Menu Management
- Inquire Option
- VA FileMan
- Data Dictionary Utilities
- List File Attributes

For a more exhaustive option listing and further information about other utilities that supply online technical information, consult the DHCP Kernel Reference manual.

11.1 %INDEX

This option analyzes the structure of a routine to determine in part if the routine adheres to RPMS programming standards. The %INDEX output can include the following components:

- Compiled list of errors and warnings
- Routine listing
- Local variables
- Global variables
- Naked globals
- Label references
- External references

Running %INDEX for a specified set of routines, allows users to discover any deviations from RPMS programming standards that exist in the selected routines and to see how routines interact with one another (i.e., which routines call or are called by other routines).

To run %INDEX for the Patient Registration package, type the VEN namespace at the Routine(s)?> prompt.

11.2 Inquire Option

This menu management option provides the following information about a specified option:

- Option name
- Menu text
- Option description
- Type of option
- Lock (if any)

In addition, all items on the menu are listed for each menu option. To secure information about patient registration options, specify the VEN namespace.

11.3 List File Attributes

This VA FileMan option allows users to generate documentation pertaining to files and file structure. Using the standard format of this option yields the following data dictionary information for a specified file:

- File name and description
- Identifiers
- Cross-references
- Files pointed to by the file specified
- Files that point to the file specified
- Input, print, and sort templates

In addition, the following applicable data is supplied for each field in the file:

- Field name, number, title, and description
- Global location
- Help prompt
- Cross-references
- Input transform
- Date last edited
- Notes

Using the Global Map format of this option generates an output that lists the following information:

- All cross-references for the file selected

- Global location of each field in the file
- Input, print, and sort templates

12.0 SAC Requirements and Exemptions

A single exemption was requested for this release. SACE requires that the native Windows installer be used to install all desktop components. Before this requirement was officially adopted, we used an open source installer called NSIS (Nullsoft Scriptable Intall System) to distribute the alpha versions on the WCM desktop components. Since this is a free, open source application that works perfectly in this instance, we requested the exemption to save time and development costs associated with completely redoing the install.

13.0 PCC+ Files and Cross References

13.1 VEN EHP ICD Preferences File

Glossary

Archiving

The storing of historical or little-used data off-line (often on tape).

ASUFAC number

Area Service Unit Facility; A unique identifier for each facility within IHS. A six-digit number comprised of 2 digits for Area, 2 digits for Service Unit, and 2 digits for Facility.

Banner

A line of text with a user's name and domain.

Browser

An interactive application that displays ASCII text on a terminal that supports a scroll region. The text can be in the form of a word-processing field or sequential local or global array. The user is allowed to navigate freely within the document.

Callable Entry Points

Places in a routine that can be called from an application program.

Cross-reference

An indexing method whereby files can include pre-sorted lists of entries as part of the stored database. Cross-references (x-refs) facilitate look-up and reporting.

Default Facility

A user selects a facility identification to work with patients registered to that facility.

Entry Point

Entry point within a routine that is referenced by a "DO" or "GOTO" command from a routine internal to a package.

File

A set of related records or entries treated as a single unit.

FileMan

The database management system for RPMS.

Global

In MUMPS, global refers to a variable stored on disk (global variable) or the array to which the global variable may belong (global array).

Health Record Number (HRN)

Each facility assigns a unique number within that facility to each patient. Each HRN with its facility identification ‘ASUFAC’ make a unique identifier within all of IHS.

INDEX (%INDEX)

A Kernel utility used to verify routines and other MUMPS code associated with a package. Checking is done according to current ANSI MUMPS standards and RPMS programming standards. This tool can be invoked through an option or from direct mode (>D ^%INDEX).

Init Initialization of an application package. The initialization step in the installation process builds files from a set of routines (the init routines). Init is a shortened form of initialization.

Internal Entry Number (IEN)

The number used to identify an entry within a file. Every record has a unique internal entry number.

IRM

Information Resource Management. The IHS personnel responsible for information systems management and security.

Kernel

The set of MUMPS software utilities that function as an intermediary between the host operating system and application packages, such as Laboratory and Pharmacy. The Kernel provides a standard and consistent user and programmer interface between application packages and the underlying MUMPS implementation. These utilities provide the foundation for RPMS.

Menu

A list of choices for computing activity. A menu is a type of option designed to identify a series of items (other options) for presentation to the user for selection. When displayed, menu-type options are preceded by the word “Select” and followed by the word “option” as in Select Menu Management option: (the menu’s select prompt).

Namespace

A unique set of 2 to 4 alpha characters that are assigned by the database administrator to a software application.

Option

An entry in the Option file. As an item on a menu, an option provides an opportunity for users to select it, thereby invoking the associated computing activity. Options may also be scheduled to run in the background, non-interactively, by TaskMan.

Patient Care Component (PCC)

The central repository for data in the Resource and Patient Management System (RPMS).

Queuing

Requesting that a job be processed at a later time rather than within the current session.

Routine

A program or sequence of instructions called by a program that may have some general or frequent use. MUMPS routines are groups of program lines that are saved, loaded, and called as a single unit via a specific name.

UCI

User Class Identification: a computing area.

Up-Hat (^)

A circumflex, also known as a “hat” or “caret,” that is used as a piece delimiter in a global. The up-hat is denoted as “^” and is typed by pressing Shift+6 on the keyboard.

Utility

A callable routine line tag or function. A universal routine usable by anyone.

Variable

A character or group of characters that refers to a value. MUMPS recognizes 3 types of variables: local variables, global variables, and special variables. Local variables exist in a partition of the main memory and disappear at sign-off. A global variable is stored on disk, potentially available to any user. Global variables usually exist as parts of global arrays.

Acronym List

None
