

DEPARTMENT OF HEALTH & HUMAN SERVICES

Public Health Service

Indian Health Service
Rockville MD 20852

November 30, 2009

TO: Deputy Assistant Secretary
Office for Facilities Management and Policy

FROM: Director
Division of Facilities Operations

SUBJECT: FY-2009 Energy Report

I am responding to your request for the FY-2009 Energy Report.

Per your direction, these reports are being sent electronically to Mr. Pete Aitcheson, Department of Health and Human Services Energy Officer. The report is organized in the following manner:

- I. IHS Annual Energy Narrative Report
 - A. FY-2009 OPDIV Energy Management Data Report
 - B. FY-2009 OPDIV Excluded Facilities Inventory
 - C. FY-2009 OPDIV Cumulative Metering Schedule

If you have any questions regarding the report, please contact CDR Gordon Delchamps, P.E., Division of Facilities Operations, at (301) 443-1367.

/James R. Biasco/

James R. Biasco P.E.
Director, Division of Facilities Operations

IHS Annual Energy Report

I. Management and Administration.

A. Energy Management Infrastructure

1. Senior OPDIV Official

The Senior Agency Official is the Director, Division of Facilities Operations. This person supervises the Agency's Energy Coordinator.

2. OPDIV Energy Team

The Agency Energy Team consists of 12 Area Offices (Aberdeen, Albuquerque, Alaska, Bemidji, Billings, California, Nashville, Navajo, Oklahoma, Portland, Phoenix, Tucson) and 2 Regional Offices (Engineering Service (ES) in Dallas and Seattle). The 12 Area Offices and 2 Engineering Services Offices each have a designated Energy Coordinator who is supervised by the applicable Area Facility Engineer or ES Director.

Area	Energy Coordinator
Aberdeen	Delton Woodford
Alaska	Carl Remley
Albuquerque	Deanne Waconda
Bemidji	Peter Hartmann
Billings	Burke Helmer
California	Phil Church
ES-Dallas	Suresh Shah
ES-Seattle	Pedro Valverde
Headquarters	Gordon Delchamps
Nashville	George Styer
Navajo	Nate Morris
Oklahoma	Robin Holden
Phoenix	Mike Jensen
Portland	Brian Daily
Tucson	Marc Fleetwood

Aberdeen: In the 2009 reporting period the Aberdeen Area formed a team consisting of three staff engineers (two mechanical engineers and one electrical engineer) to collaborate, develop and complete energy audits at two large facilities in the Aberdeen Area in calendar year 2009. In addition to evaluation of the benchmarks prescribed in the Executive Order the team also completed comprehensive water audits, and recommissioned the major mechanical systems in these facilities.

Alaska: The Alaska Area employees an Area Energy Coordinator (Carl Remley) to collect and report data to the Tribal Health Organizations (THO's) and Indian Health Service Headquarters. The Coordinator seeks energy saving program and project opportunities to implement Executive Order 13423. He does this by working with the THO Facility Managers and the Health Facility Engineers at ANTHC, DEHE. Coordination of these efforts is through the Maintenance and Improvement Resource Allocation Committee (MIRAC) to collect data and implement energy conservation measures and training. The MIRAC voted to make energy conservation the responsibility of the individual THO's. This approach will have to be revisited at the next MIRAC due to the additional energy conservation, water conservation, energy audit and water conservation requirements that have been added through Executive Order.

In an attempt to keep the cost of meeting these additional requirements to a minimum, the Health Facilities Engineers and the THO Facility Managers will play an active role in performing and updating energy audits as well as implementing the conservation measures. Funding for this significant effort is a concern.

Albuquerque: The Area Energy Manager coordinates the energy program with the three District Facility Engineers and the Area Project managers under the guidance and supervision of the OEHE Director. The team is responsible for proposing and coordinating energy and energy-related projects at each facility. The Energy Manager is responsible for preparing reports and maintaining the utility database. The Facility Engineers are responsible for managing their energy consumption and reporting any improvements, recommendations, or fluctuations.

Bemidji: Bemidji Area Energy Team is comprised of four members. The Assistant Director of Facility Management compiles and enters data provided by the facility managers at the three Federal service units.

Billings: Burke Helmer, P.E., CFM, Energy Coordinator, assists the facility managers at the service unit level to achieve the requirements of E.O. 13423, EPAAct 2005, and EISA 2007.

California: There are no Federally-owned facilities in this Area.

Nashville: The Nashville Area team consists of CAPT George Styer and LCDR Allen Bollinger. Work with Area Federal facilities to implement E.O. 13423.

Navajo: Nathaniel Morris is the Area Energy Coordinator and Jonathan Flannery is the assistant. Area responsibility is to

assist service units on energy ideas to be implemented at the service unit level.

Oklahoma City: The members of the Area's team that will work on energy management infrastructure projects this year include: Bobbie Gonzalez: Project Manager and COTR for the 5-year, Area-wide Facilities Condition Survey project awarded to Kere's Consulting September 2009. The FCS project will include a sustainability assessment component based upon the HHS December 31, 2008 policy (HHS Sustainable Buildings Implementation Plan). The SBIP realigns HHS goals with E.O. 13423.

Stephen Christopher: As technical consultant from ES-Seattle, he will assist implementing the advanced metering directives starting with Lawton and Claremore and to a lesser extent in Pawnee, Clinton and Haskell. He will also be the lead in the retro- and recommissioning work planned for the Area. Recommissioning will include improvement to the DDC systems at the Lawton and Claremore hospitals.

Dominic Moreau: He has been assigned to assume the responsibility of tracking, analyzing, and sharing utility costs with pertinent facility management staff. He will work with Stephen Christopher (ES-Seattle) to implement the analyzing and sharing of the new data generated when the advanced metering components are installed area-wide in FY-2010. He will also work to become the Area Office technical, onsite consultant on creating energy profile reports from the DDC systems being improved and recommissioned in Lawton and Claremore hospitals.

Mitch Baroff: As the primary planner, he will incorporate the HHS Sustainable Buildings Implementation Plan (SBIP) into the upcoming Phase 2 and Phase 3 expansion projects at Lawton.

Hugo Gonzalez: As O&M technical lead for the OCA office, he will use energy usage data, facility condition surveys, energy audit data, O&M history from WebTMA and onsite observation, to develop a best practices approach to meet and exceed E.O. 13423 sustainability directives.

Robin Holden: As Oklahoma City Area Facilities Management Director, he will plan, assign and coordinate all Area-wide efforts to ensure early implementation of E.O. 13423 sustainability directives.

Phoenix: The Energy Officer works with members of the Area Operation Branch to review the requirements of E.O. 13423 with the service units during the Annual General Inspections.

Portland: The Area's team includes the Portland Area Office engineers, facility managers, and maintenance staff. PAO tracks energy and water consumption for the Area. The engineers work with the facility managers to identify energy conservation projects and funding sources.

Tucson: Tucson Area EMS team currently includes Glenn Hansel, Travis Bowser, Ron Speakman, Magdalena Moreno, and Charles Craig. They are working on energy efficiency projects and waste stream improvements. Energy Audits have been conducted for all the larger facilities in the Area.

B. Management Tools

1. Awards (Employee Incentive Programs)

DHHS Environmental Award Winner –

CDR Stephen Christopher, P.E., Division of Engineering Services, Indian Health Service, Lawton Health Facility Expansion, Lawton, Oklahoma.

IHS recently completed a 3,340 gross square meter expansion project at the Lawton Indian Hospital, Oklahoma City Area, which now houses primary care clinics and a pharmacy. This capital asset expansion achieved LEED Silver certification, along with the energy and environmental stewardship attributes that help provide a healthy, productive, and comfortable place for health care providers and patients.

The expansion project at the hospital included the installation of R-19 batt insulation and an assembly rating of R-14.9 for the exterior wall construction, R-30 rigid insulation and an assembly rating of R-35 for the roof construction, a 9.8 percent window-to-gross-wall ratio, fixed double-pane low-E type fenestrations, a 0.55 fenestration U-factor, shading devices on the west exposure, interior lighting power densities based on design fixtures, variable volume direct expansion packaged rooftop units using refrigerant R-407C with terminal unit reheat, variable frequency drives for fan supply volume control, demand control ventilation and an Energy Star compliant roof with a high solar reflectance.

The facility expansion project also included several environmental features such as xeric plants that are either native or adaptive to the area, preferred parking spaces for low-emitting/fuel-efficient or carpool vehicles, credit for an equivalent Brownfield site redevelopment, and recycling of concrete and brick for use as structural fill on a new commercial facility and as bank protection along a creek.

“You Have the Power” Campaign Energy Project –

Lawton Indian Hospital, Lawton, OK.

The U.S. Department of Health and Human Services, Indian Health Service (IHS) Oklahoma City Area, expanded the clinical space at the Lawton Indian Hospital to pursue a LEED Silver certification. The expansion design included sustainable features such as energy efficient lighting and controls, daylighting, Energy Star roofing, high efficiency HVAC equipment with automated controls, renewable electricity procurement and healthy, natural and recycled building materials. The estimated annual energy savings of the sustainable design are 11.9 percent for electricity and 41.6 percent for natural gas.

- Aberdeen: Aberdeen Area IHS recognizes the achievements of DFM staff and Service Unit Facilities Managers relating to levels of Energy Use Intensity at our Annual Facilities Manager Workshops. In addition to providing deserving staff with documentation of the award or recognition to insert in their personnel files, the awards and recognitions are typically accompanied with small cash rewards.
- Alaska: ANTHC and/or Tribal Health Organization employees are not directly compensated for exceptional performance specifically related to Executive Order 13423. However, they are eligible for HHS Energy and Water Management Awards, and the DOE Federal Management Awards.
- Albuquerque: No information to report.
- Bemidji: The Bemidji Area did not distribute energy awards for FY-2009.
- Billings: The Billings Area Office has continued with the Energy Awards Program open to all employees within the Billings Area. The program has four different award categories that either an individual or a group of individuals can submit a project for. Three of the awards are cash awards and the fourth is a Service Unit Award that can receive \$25,000 of M&I money to supplement their facility program. All potential award nominations are submitted to the Area Office for review by a registered engineer and must have an attractive Life Cycle Cost Analysis. The projects must then be initiated by the service unit with cooperation by the Area Office. Nominations for the annual HHS Energy and Water Management Awards and DOE's Federal Energy Management Awards are available to all employees for submission.
- California: There are no Federally-owned facilities in this Area.
- Nashville: No awards given in 2009.
- Navajo: No employee incentive program established.
- Oklahoma City: The incentive awards program was not used this year but has been effectively utilized in the past. Future plans, if successfully implemented, will provide more opportunities to make future award recommendations.
- Phoenix: The Area currently has no employee incentive program unique to energy.
- Portland: No incentive programs are being utilized.
- Tucson: The Area currently has no employee incentive program unique to energy.

2. Performance Evaluations

The performance evaluations of the Senior OPDIV Official and the Agency Energy Coordinator both have cascaded elements from the Director's Performance Contract. These include strategic management of real property and meeting OMB and HHS mandated "Green" Standards for Success.

- Aberdeen: The PMAP of the current Energy Manager for the Aberdeen Area has language in the elements reflecting the priority and importance of achieving progress and compliance with EO 13423. The Area DFM program is encouraging service unit management in incorporate energy related elements in the Service Unit FM staff PMAP's as well.
- Alaska: The Area Energy Coordinator is a Certified Energy Manager with over 22 years experience in the energy conservation field. This knowledge when combined with the individual facility knowledge of the other Health Facility Engineers and the THO Facility Managers will be used to implement the requirements of Executive Order 13423.
- Albuquerque: A component is included in the Facility Engineers' duties and the Energy Coordinator.
- Bemidji: Energy management and reporting is included in the position description of the Assistant Director of Facilities Management for the Bemidji Area. Evaluations are then based on the performance of those items as listed in the position description.
- Billings: The Deputy Director of Facilities Management currently has the responsibility of Energy Coordinator and all the duties associated with it. The performance of those duties is evaluated by the Director of Facilities Management during his/her annual review.
- California: There are no Federally-owned facilities in this Area.
- Nashville: The performance elements do not cascade to the Area energy team.
- Navajo: Each facility manager is responsible at their respective Installation for data to be submitted to the Area for review. Each service unit has selected members to assist the facility manager on collection, programs, monitoring utility usages, and implementing a recycling program.
- Oklahoma City: Due to the significant change in staff responsibilities in FY-2009, duty responsibilities relating to E.O. 13423 have also changed significantly. Since the E.O. 13423 does not constitute a majority component of any of the Area Office job descriptions, no position descriptions will be changed. PMAP's for civilians in the DFACM will include a sustainability effort component and USPHS officers will include comments in the COER's on efforts.
- Phoenix: The Area Energy Officer signs off on the cascading energy elements for the Area Director.
- Portland: No incentive programs are being utilized.
- Tucson: The Area Facility Manager functions as the senior energy official.

3. Training and Education

A. Training and Education - General

The Senior OPDIV Official attended GovEnergy 2009 and the Agency Energy Coordinator attended the World Energy Engineering Congress in 2009. Both also attended miscellaneous energy-related training sessions throughout the year. Several Headquarters staff attended short courses and free seminars and Web-based training.

The Division of Engineering Services developed methodology for conducting energy-efficiency life-cycle cost analysis and presented their findings at the Area Facility Manager's Workshop in Seattle, Washington.

Aberdeen: The DFM program of the Aberdeen Area encourages Service Unit Facilities staff to utilize all continuing education opportunities available to increase their knowledge, expertise and skill sets pertaining to Energy conservation, maintenance and operation of equipment and building systems and utilization of new technologies with applications for health care facilities.

In-house training/workshops provided for our Service Unit Facilities Staff routinely include focused review and exploration of new federal mandates, technology to aid and assist Facilities staff to improve their facility's EUI, methods to improve building system efficiencies and development of internal policies and procedures to establish frameworks for programs to implement improvements. The Area FM program is sponsoring a group training in Pierre, SD in November of 2009 for service unit staff to become more knowledgeable of the Web-based building automation systems that we have installed in conjunction with the installation of the advanced electrical meters. As opportunities for group training become available the Area DFM program makes efforts to, where cost effective and budget is available, provide the training.

The Area Energy Coordinator is a licensed Mechanical Engineer and is also a Certified Energy Manager.

Alaska: In addition to the Certified Energy Manager credentials, the Alaska Area Coordinator is presently taking courses specific to the Alaska climate. These include computerized analysis of buildings in Alaska, vapor barrier needs and standards, and the special facility needs of buildings located in the cold climate regions of Alaska. This is all in addition to national level education such as Energy Star.

ANTHC, DEHE is also working the DOE, EPA, the State of Alaska, and the Denali Commission to further the energy conservation efforts throughout the state of Alaska.

Albuquerque: Training continues to be encouraged and provided. DHF staff participated in a series of one-day courses offered through the PNM energy academy that included Motor Controls, Mechanical Systems, and Energy Efficiency Management.

DHF staff receive information on Energy Star products and procurement. DOE and FEMP flyers, posters, and handouts are provided to the service units for their use.

Bemidji: The Facility Manager at the White Earth Health Center is a Certified Energy Manager.

Facility Managers at each service unit attended an Area discussion of energy projects and auditing procedures.

Energy related courses and seminars are announced to staff.

Billings: The Energy Coordinator conducted energy management training during the Area's facilities management workshop in Spring 2009. The training was provided to the facility managers from the service units. In addition, training is available to all service unit facilities staff and provided through the National Environmental Health Support Center as well as numerous third party training courses available nationally. Facilities personnel are encouraged to attend energy management training.

California: There are no Federally-owned facilities in this Area.

Nashville: All Area purchases request ENERGY STAR® products when appropriate. Area facilities engineers and maintenance personnel attend Environmental Health Support Center Training when available.

Navajo: Information regarding education, training, and promotion of Energy Star has been relayed to facility managers to be distributed to their energy task force.

Oklahoma City: No training provided or taken this year due to concentrated efforts on ARRA projects and reduced staff levels. Training is already being planned for FY-2010 in conjunction with planned advanced metering and retro- and recommissioning plans.

Phoenix: There is no specific program within the Area to educate, train or promote ENERGY STAR. The Area Energy Coordinator does not hold any energy related certifications.

Portland: There was energy management training for facility managers at the annual Area workshop. Facility managers have taken the initiative to pursue training on their own accord. The training includes the Building Operator's Certification (BOC). The Area Energy Coordinator has completed the Energy Auditing Certification training.

The Health Facilities Engineering division includes ENERGY STAR specifications on all projects.

Tucson: No formal training has been attended.

B. Energy Coordinator Qualifications/Training/Education

- Aberdeen: The Area Energy Coordinator is a licensed Mechanical Engineer with 27 years of professional experience with health care facilities. He is also a Certified Energy Manager.
- Alaska: The qualifications for the Area Energy Coordinator include Energy Manager Certification, a BSME, and 22 years of private practice performing energy audits and implementing conservation measures in commercial and industrial facilities.
- Albuquerque: The Area Energy Coordinator attended the PNM Energy Academy series for this year.
- Bemidji: The Bemidji Area Energy Coordinator is not CEM certified. However, the Facility Manager at the White Earth Health Center is CEM certified and his expertise is utilized to assist the Area with energy related issues.
- Billings: The Area Energy Coordinator, Burke Helmer, P.E., CFM has over thirteen years of testing, commissioning, and troubleshooting of HVAC systems within commercial and healthcare facilities. The most recent training occurred in April 2008 completing the Indian Health Service Energy Management Training "Train the Trainer" course.
- California: There are no Federally-owned facilities in this Area.
- Nashville: CAPT George Styer has his CEM.
- Navajo: No set qualification standards have been developed for the Area Energy Coordinator.
- Oklahoma City: The Area Energy Coordinator, CDR Robin Holden, is a CEM and a member of the Association of Energy Engineers. He has been involved with the Oklahoma City Area Office energy and sustainability efforts since January 2006. Continuing training include attendance at various seminars and courses over the past four years. However, no directly related continuing education course was taken this year.
- Phoenix: The Area Energy Coordinator does not have any energy related certifications.
- Portland: The Area Energy Coordinator has completed the Energy Auditing Certification training and mechanical engineering coursework at the local university.
- Tucson: Only on the job training, nothing formal.

II. Energy Efficiency Performance

A. Energy Intensity Reduction Performance

1. Goal Subject Buildings

Per EAct 2005, IHS is required to report on energy consumption and the progress toward meeting the two percent per year consumption reduction goal from an FY-2003 baseline. In FY-2003, IHS consumed a total of 1,311,076 MMBTU or 199,616 BTU/GSF. In FY-2008, IHS consumed a total of 1,248,700 MMBTU or 182,711 BTU/GSF if renewable energy credits are not factored in and 176,761 BTU/GSF if renewable energy credits are factored in. In FY-2009, IHS consumed a total of 1,276,300 MMBTU or 191,881 BTU/GSF if renewable energy credits are not factored in and 186,188 BTU/GSF if renewable energy credits are factored in.

Including Renewable Energy Credits -

Baseline Year: IHS has decreased usage from 199,616 BTU/gsf in FY-2003 to 186,188 BTU/gsf in FY-2009. This represents a decrease of 6.7 percent.

Previous Year: IHS has increased usage from 176,761 BTU/gsf in FY-2008 to 186,188 BTU/gsf in FY-2009. This represents an increase of 5.3 percent.

Excluding Renewable Energy Credits -

Baseline Year: IHS has decreased usage from 199,616 BTU/gsf in FY-2003 to 191,881 BTU/gsf in FY-2009. This represents a decrease of 3.9 percent.

Previous Year: IHS has increased usage from 182,711 BTU/gsf in FY-2008 to 191,881 BTU/gsf in FY-2009. This represents an increase of 5.0 percent.

The FY-2003 baseline was mutually agreed upon by IHS and DHHS.

Some fluctuation may be due to several facilities entering and leaving the inventory during the year and these facilities are not included in the reporting data. Also, there are several new staff gathering and reporting data from Area Offices and Installations so there may be some differences in methodology from previous gathering and reporting methods. This is the second year that data were reported by Installation rather than as Area-wide totals. Some past year's values may have been calculated using square footage totals that included space for which energy consumption was not reported.

Aberdeen: At this time the data that has been submitted by our service units is still under evaluation. Based on improvements

in the "operations" of facilities that have recently enacted new policies, hired new professional staff or completed modernization of building automation systems, improvements in the building envelope or replaced aged equipment it is anticipated that multiple facilities/organizations will demonstrate considerable improvement in their overall energy use intensity levels from the previous reporting year. The Aberdeen Area comprises a large geographical area in the northern plains region of the country where winters are typically extremely cold and summers can be unbearably hot. It is envisioned that an objective review of the EUI and correlation with weather data at each location will explain any major increases or decreases in EUI. At locations where it is known that only minor improvements to the facilities, building systems or control systems have occurred in the past 12 months.

- Alaska: In the past, the Maniilaq Health Center in Kotzebue, Alaska was reported as a Federal Facility. Ownership of this facility has been taken over by Maniilaq Association therefore data on this facility is not reported for 2009.
- Albuquerque: The report for gas consumption at Mescalero is low. Several utility invoices from the gas company did not include information on the amount of gallons refilled and follow up with the gas company was not helpful. New boilers were installed and a reduction was predicted, but not at such a significant rate. The usage will continue to be monitored.
- Water consumption for the Santa Fe Installation increased. The facility is working with the utility company to determine if there is a leak anywhere in the system. New meters were installed prior to the spike, so the increase may be due to a malfunction in the old meters.
- Bemidji: It has been noticed that the 2003 baseline year gross square feet of space has been entered in error. This will affect yearly references to this baseline.
- Billings: The Area used the various reports within Discoverer to capture the utility expenditures within UFMS. The data was then exported to MS Excel where the expenditures can be filtered by object class code and Installation. The 2009 consumer price index for Montana by utility was used again to mathematically calculate the quantities. The Area is still progressing in terms of capturing more accurate data. In FY-2010, we will be utilizing the UFMS Project Accounting module to limit obligations to those with the correct object class code only. In addition, we will be requiring all facility managers to collect and sign-off on all utility invoices prior to sending them to Area Finance for payment. They should also be recording the utility consumptions and cost by building within a spreadsheet provided by the energy coordinator. Once fully implemented, the accuracy of the data should see dramatic improvement and eliminate using average utility costs obtained by the CPI.
- California: There are no Federally-owned facilities in this Area.
- Nashville: Unity Youth Treatment Facility, Cherokee, NC, has only been online for one year. We are still working on adjusting the new systems for optimal performance. As shown in the data, we have used more energy than the year prior to renovations. Prior to renovations the building had very poor control over the climate leading to severe mold growth. The new system has drastically improved comfort in the building but at the cost of additional energy use.
- Navajo: I am curious to Installations that ask for previous Fiscal Year reports and report back to me on their Installation reports of current year. Facility managers that have left the Installation and have not trained or mentioned thought process of how data collection was being implemented.
- Oklahoma City: The current year values are directly from the utility bills and are considered very reliable.
- Pre-2007 energy reports submitted to HQ were primarily based upon WebFRS data. This previous data collection method only tracked costs, mixed utility data costs (i.e. water, sewer, solid waste and power on same bill not broken out in WebFRS) and did not provide consumption quantities. The utility consumption quantities had to be estimated based upon total cost of the bill divided by the current utility rates. Current energy history records (now available not used in pre-2007 reports), uses archived utility billing back to 2003 (in most cases) and provides a vastly improved energy consumption record.
- Phoenix: Data has not been evaluated to determine significant changes.
- Portland: The data doesn't change dramatically from previous year of consumption, values are similar.
- The FY-2009 winter was colder than usual contributing to larger spikes in energy utilized in the heating season.
- At the Colville Service Unit the faulty programming of direct digital controls caused larger uses of energy throughout the winter. A commissioning and controls programming project was completed in the summer of 2009. As the heating season started in the fall, there have been significant improvements in energy conservation.
- Tucson: Use is close to constant, but costs have risen.

2. Excluded Facilities

See Attachment B for a listing of excluded facilities with their associated exclusion codes.

3. Non-fleet Vehicle and Equipment Fuel Use

All fuel consumption is collected by GSA through the use of their FAST program.

B. Renewable Energy

The Indian Health Service is in the preplanning and information gathering stages to implement renewable energy technology where feasible and cost effective. We have been working with FEMP to determine the optimum mix of technologies at many locations. We continue to provide to the Area Offices information regarding requirements, technologies, funding mechanisms, etc.

Renewable energy goals are developed for new construction projects and outlined in Programs of Requirements and Project Summary Documents. On-site renewable energy goals for new construction are incorporated into the new A/E Guide.

1. Self-generated Renewable Energy

- Aberdeen: During the 2009 reporting period the Aberdeen Area did not procure electrical energy from renewable sources that was generated on site. The Area did develop and submit two projects targeted for the production of renewable electrical energy as ARRA projects in the Spring of 2009. As a result of these projects having been funded with ARRA dollars the Area is proceeding with all necessary procurement steps to complete the construction, start-up and operation of two wind generators to be constructed at the Pine Ridge and Rosebud facilities. The Aberdeen Area has and continues to plan, design and construct improvements to facilities to ensure, where cost effective, that full compliance with Executive Orders and underlying standards/codes (i.e. ASHRAE 90.1 and the International Energy Conservation Code) is paramount in the design and construction activity. As a result of this focus the Area has continued with its plan to install geothermal heat pumps when opportunities and funding are available for the upgrade or installation of new mechanical systems for satisfaction of heating and cooling loads. Since DHHS standards define geothermal heat pumps as a system that delivers renewable energy the Area continues to demonstrate its commitment to the this type of thermal renewable energy project
- Alaska: Although we do not have any specific projects to date, we are actively seeking renewable projects and will make sure they are seriously considered in all of the upcoming energy audits.
- Albuquerque: Two facilities continue to participate in the Wind Energy program through the electric utility company. Two smaller buildings also participate by purchasing blocks of wind energy. The participation of these two buildings was increased since the initial investment proved beneficial and amounted to minimal extra billing.
- Bemidji: No recent projects have been completed for self-generation of electricity or thermal projects. No energy is being generated on Federal or Indian Lands. However, discussions of installing wind turbines on Indian Land within the Bemidji Area are occurring.
- Billings: The Area does not generate electricity, renewable or otherwise, within any installation at this time.
- California: There are no Federally-owned facilities in this Area.
- Nashville: The Nashville Area did not produce any self-generated renewable energy.
- Navajo: No renewable generated projects.
- Oklahoma City: Two of the Oklahoma City facilities, Lawton Indian Hospital and Clinton Indian Health Center, purchase power from the Public Service Company. The PSO generates 8 percent of its power from new wind power facilities in Oklahoma (soon expected to be 11 percent). 1615 kWh of renewable energy credits (REC's) were purchased through the broker Nexant Clean Energy Markets and credited to the IHS Oklahoma Area renewable energy percent calculation.
- Phoenix: No known activities.
- Portland: No projects have been implemented.
- Tucson: None

2. Purchased Renewable Energy

- Aberdeen: In the 2009 reporting period the Aberdeen Area did not purchase Renewable Energy Certificates.
- Alaska: No purchases of renewable energy have been made to date.
- Albuquerque: No REC's purchased.
- Bemidji: The Bemidji Area did not purchase any REC's in FY-2009.
- Billings: The Billings Area purchases renewable energy "green tags" from Northwestern Energy each month. Each green tag represents 100 kWh at a cost of two dollars per tag. Northwestern Energy buys its renewable energy from the Judith Gap Wind Farm in Montana that came into production after 1999 and therefore is considered new renewable energy. The annual purchase currently exceeds the required 3 percent.
- California: There are no Federally-owned facilities in this Area.
- Nashville: Procurement of "Green Energy" is not available from the local utility supplier. REC's have been investigated and not considered to be cost effective. These funds will be saved and used in the future as a project to produce self-generated renewable energy.
- Navajo: No purchases of REC's.
- Oklahoma City: 1615 kWh of renewable energy credits (REC's) were purchased through the broker Nexant Clean Energy Markets and credited to the IHS Oklahoma Area renewable energy percent calculation. Nexant obtained a very favorable price for these credits by combining customers such as the Air National Guard, USAF Academy, several Air Force Bases and the Department of Energy into a single solicitation. The Defense Energy Support Center, Electricity Branch in Virginia issued the award for \$43,675.71 for the group. The IHS, OCA share was 1615 kWh of electricity REC's for \$1,349.05 - 813 MWh from an Iowa wind farm and 812 MWh from a Louisiana biomass project.

Phoenix: No activity.

Portland: No REC's were purchased in FY-2009.

Tucson: None

C. Water Conservation

The Indian Health Service Water Management Plan was updated to reflect new requirements and was adopted December 31, 2008. It was distributed to the Area Offices and is available on the Division of Facilities Operations' Web site. MOU Guiding Principles for reduction of indoor and landscaping potable water for new construction are incorporated into the new A/E Guide.

Aberdeen: At those facilities in the Aberdeen Area where the collection of water consumption data is facilitated by the local Facility Manager, the water utility company or through measures and collaboration with the Area Facilities program we are finding that the average water consumption (all facilities) is approximately 2.1 gallons/square foot per month. We continue to improve in the methods and frequency that water consumption data is collected at the local level and we are completing projects to integrate additional meters into projects at buildings that currently are not metered individually for water consumption. The Area Energy Manager completed comprehensive water audits at two the Areas largest facilities in 2009. These actions are resulting in the service unit management recognizing the Area's FM program commitment to reducing water consumption through adaption of the FEMP guidelines, through the purchase and installation of fixtures that meet the water consumption standards and through education of our staff.

Alaska: No specific activities have been undertaken to date to improve water efficiency. However, it will be a focus of the energy audits as we move forward. One of the issues we have is that some of our facilities have wells and do not buy water from the city or a utility.

Albuquerque: The installation of new water meters is included in the Area-wide DDC project to provide more accurate data for two facilities that lack a tribal metering system. These locations pay for water at an agreed upon flat rate.

Bemidji: The Bemidji Area utilizes best management practices to conserve water. Ponemah received a water meter in March 2009. Now all installations have water meters.

Water is provided by tribal utilities and the Installations are not charged a fee. The exception is Cass Lake Hospital. Cass Lake receives water from the City of Cass Lake at this time. Cass Lake Hospital will be connected to a tribal water system in the near future. It is anticipated rates will be reduced.

Billings: The Billings Area spent \$102,230 in FY-2009.

Water consumption data is collected in the same manner as the other utilities and may be skewed by the inability to extract sewer costs.

The Area has recently hired another FTE within the facilities management program and has been tasked to develop a water management plan for the Area.

California: There are no Federally-owned facilities in this Area.

Nashville: All water consumption values are known and reported in the data report. A circulating hot water system was installed at the Unity Healing Center in Cherokee, NC. This will allow for nearly instantaneous hot water instead of staff and residents letting water go down the drain waiting for hot water. During the past year of use we have found that the circulating hot water system is working very well and all residents are pleased with how quickly they have hot water at the tap.

Navajo: An estimated 14,337M gallons of water was consumed in FY-2009 for the 9 out of 27 Installations that reported. There are 5 locations that did not report since they are operated under P.L 93-638 contracts. A total of four Installations consume water that is provided by the BIA and not metered. Nine locations did not report at all.

Oklahoma City: Total estimated water consumption for the Oklahoma Area for FY-2009 is 18,334,600 gallons. The water consumption issues primarily relate to three facilities:

Lawton Indian Hospital: Since the construction of the hospital in the early 1900's, the hospital has had an agreement with the City of Lawton for free water from the city. Subsequently, there is no master meter to measure the water used on the Installation. Nevertheless, a master meter is planned for FY-2009 and telemetry will tie it into the Siemens DDC system. Conservation efforts will still be made for this facility and progress tracked using this newly installed meter.

Pawnee Indian Health Center: The Pawnee Nation Utility Authority has had some internal organization problems this year and has only partially billed the health center for water this year. There have been no consistent water meter readings throughout the year so the water consumption was estimated to be the same as last year's.

Clinton Indian Health Center: The facility was constructed with landscaping that requires supplemental watering during the heat of the summer (Bermuda grass and decorative shrub perimeter). Xeriscape design would have been preferable for water conservation purposes if special terracing had been incorporated into the grading design. There are a number of steeper slopes that require the maintenance of grass to prevent the erosion of the sandy loam soil. To save on city water utility costs, the current facility administration drilled a well in 2009 to use for limited surface sprinkling during long term dry weather periods.

Phoenix: Whiteriver Service Unit installed a water meter to monitor water consumption. No other activities in this area.

Portland: The total water usage (partially estimated) by Portland Area Federal Facilities in FY-2009 was, 18.4 million gallons. Most water meters have to be read by the facility managers. Some tribal utility companies don't bill for water.

BMP low flow toilets have been installed through the service units.
New construction has specified WATERSense and Xeriscaping practices.
Facility managers have utilized high water meter readings to diagnosis irrigation leaks.

Tucson: Water consumption has remained constant, but the high water use landscape will be removed in FY-2010 and the installation of 0.5 gpm aerators has been completed at the San Xavier Campus.

D. Metering of Electricity Use

The completed IHS Metering Plan and the Advanced Electrical Metering Specifications for IHS Buildings were distributed to the Area Offices and are available on the Division of Facilities Operations' Web site. Both were submitted to the Department as required. IHS has met all metering-related milestones.

All standard meters required by the plan have been installed. Advanced meters are installed in over 51 percent of the required space exceeding the required 25 percent goal for FY-2009. Five additional advanced meters were scheduled to be installed in FY-2009. Only four were installed with one being deferred until FY-2010. However, one meter not scheduled to be installed until FY-2010 was installed in FY-2009. Including the deferred installations, four additional advanced meters are scheduled to be installed in FY-2010. One hundred percent of IHS electrical consumption is metered.

1. Metering Program Responsibility

Overall direction and guidance for the program is at the Headquarters level. Responsibility for budgeting, implementation, and day-to-day operations is at the Area and/or Installation level.

Aberdeen: The Area Director is responsible for identifying and implementing organizational resources to ensure compliance with the metering requirements. At the implementation level, the Facilities Management Program ensures that resources allocated for metering activities are planned, designed and completed.

Alaska: The Energy Coordinator.

Albuquerque: The Area Energy Coordinator maintains an inventory of meters at each Installation and updates the data as required. A site review is coordinated with the facility managers as necessary.

Bemidji: The Bemidji Area Energy Coordinator is responsible for the implementation of the Metering Plan. The facility managers at each Installation are responsible for the installation, operation, and maintenance of the meters.

Billings: The Area Energy Coordinator is tasked with the implementation of the Area's metering program.

California: There are no Federally-owned facilities in this Area.

Nashville: This responsibility lies with the Area Office.

Navajo: The Area Energy Manager is responsible for compliance with meeting the advanced metering guidance.

Oklahoma City: Area Office Staff Engineer

Phoenix: The Area has taken responsibility for the metering program.

Portland: Portland Area Health Facility Engineering Level of responsibility is to update outdated meters and comply with policy. It is the responsibility of the local Facility Managers to read and record the meter readings.

Tucson: The Area or Facility level can work on this project. The Area level has conducted some initial design work on the project.

2. Metering Budget

There are no funds set aside at Headquarters specifically for metering. The responsibility for implementation is at the Area level. Costs for metering in new construction projects is included in the associated construction budget.

Aberdeen: Service Units - locations that required advanced electrical meters were budgeted at \$25K.

Alaska: None as of right now.

Albuquerque: An amount of \$15,000 is included in the DDC projects to cover advanced metering for two locations. One has been installed but is not in full service yet since the project is on-going.

Bemidji: Bemidji Area funds are available to connect advanced meters to utility companies.

Billings: Approximately \$10-\$15,000 has been spent on advanced metering to date and anticipate an additional \$10-\$15,000 to be spent in FY-2010.

California: There are no Federally-owned facilities in this Area.

Nashville: \$0. All buildings have separate meters and no advanced metering is required or planned.

Navajo: A budget of \$200K will be proposed to correct the remaining locations at Chinle, Crownpoint, and Shiprock for FY-

2010.

Oklahoma City: \$3,500 has been budgeted for the required 3 minimum advanced meters, one electrical meter for the Claremore Indian Hospital and two electrical meters for the Lawton Hospital (one for the old hospital section and one for the new). Advanced electric master meters are planned for the remaining Government operated health care centers but the funds have not been budgeted yet.

Phoenix: There is no funding budgeted to meet metering requirements.

Portland: No funds were budgeted in FY-2009. All metering requirements are met by Portland Area Indian Health Service.

Tucson: Not a specific amount at this time. The Area is considering installing some "smart" meters at the San Xavier Campus.

3. Metering Support Services

Aberdeen: The installation of Advanced Electrical Meters has been completed by the Facilities Management program through the acquisition of contracts to provide, install and integrate the power meters with Facilities existing Building Automation Systems networks. The installation of water meters at individual buildings throughout the Area's inventory continues at each location where meters are required and are typically funded from the routine M&I or Quarters Return funds that the Area receives.

Alaska: No, in an attempt to keep the cost down, the goal is to meet the mandates with available manpower.

Albuquerque: Yes, a contract was awarded.

Bemidji: The Bemidji Area has not contracted for support services. However, local utility company representatives are utilized for information and support.

Billings: While the Area has not contracted out support services, the Area has hired an additional engineer within the facilities program at the Area level who will be assisting in meeting these mandates.

California: There are no Federally-owned facilities in this Area.

Nashville: No.

Navajo: No.

Oklahoma City: Yes. The meter installations will be incorporated into the more comprehensive retrocommissioning projects that will be given to the current Jobs Order contractor (Centennial Contractors Enterprise).

Phoenix: The Area has not identified funds for contract support services to help achieve mandates.

Portland: No, contracting support is limited in the Portland Area.

Tucson: Not yet but we have talked with Obvius about smart meters.

4. Metering O&M Contracts

Aberdeen: The type of advanced electrical meter the Aberdeen Area has chosen to install at locations were selected to be 100 percent compatible with the building/Installation existing Building Automation Systems. Because of this, all data monitored by the advanced electrical meter, i.e. VAR, real power, power factor, phase amps and voltages, etc. is able to be collected and compiled within the application and network that exists for the facility's building systems - that are also monitored and controlled via the BAS. BAS O&M contracts vary in scope and complexity by location - dependent on the level of in-house capabilities. At locations that lack adequate in-house staff knowledge to maintain components of the BAS group, or the BAS operating systems the services are provided via services contracts.

Alaska: Not as of this date.

Albuquerque: The project is presently on-going.

Bemidji: The Bemidji Area is currently adding the metering requirements into the installation O&M procedures. Not fully integrated at this time.

Billings: No.

California: There are no Federally-owned facilities in this Area.

Nashville: N/A

Navajo: No.

Oklahoma City: No.

Phoenix: The Area does not currently have site O&M contracts.

Portland: Yes, the facility managers are recording metering data.

Tucson: No.

5. Metering Design Guidance

The Indian Health Service developed the IHS Metering Plan and the Advanced Electrical Metering Specifications for IHS Buildings both of which were distributed to the Area Offices and are available on the Division of Facilities Operations' Web site.

- Aberdeen: Identification of a cost effective solution for the provision of advanced electrical meters was a process completed in the 2008 reporting period. In the 2009 reporting period the Area developed specifications to allow our acquisition program to solicit bids and award contracts for the installation of advanced meters at several sites. The key/central need identified during the feasibility phase was to identify the hardware and software necessary to provide power monitors that could be fully integrated into existing Building Automation Systems in place at our facilities. By ensuring that advanced meters installed are fully compatible with our existing networks we avoided the installation, operation and ongoing maintenance costs that would have been necessary if the advanced meters required a separate, independent network and operating environment. With the information from the power meters fully accessible to the logic and sequences that control our major mechanical and electrical systems we have created opportunity to utilize the real-time information that the power meters provide for useful, long-term benefit in the operation of the facility building systems, i.e. for peak demand shaving, identification of poor power factors, monitoring equipment performance, etc..
- Alaska: None as of this date.
- Albuquerque: The Contractor was provided a copy of the DHF guidance requirements and is familiar with the Albuquerque DDC systems to incorporate.
- Bemidji: The Bemidji Area utilizes guidance provided by Headquarters as well as information provided by the local utilities. No additional guidance has been developed within the Area.
- Billings: The Area is planning and implementing all activities associated with the metering program which includes specifying equipment, software, and hardware necessary to meet the IHS objectives.
- California: There are no Federally-owned facilities in this Area.
- Nashville: N/A
- Navajo: Guidance is used from the IHS Technical Handbook Part 72 Energy Management.
- Oklahoma City: None.
- Phoenix: No activity.
- Portland: The technical metering guide and requirements were forwarded to the service units.
- Tucson: None, we are not conducting any new construction.

6. Metering Communications Systems

- Aberdeen: The Aberdeen Area metering systems are fully integrated into existing Building Automation Systems networks. Data collected from the power meters is available to authorized users via off the shelf web browsers via a static IP address on the IHS D1 network. At facilities with systemic limitations in their IT program (hardware or human resources) the reliability of accessing the power meter information from a remote location is less than that at facilities with fully staffed, trained and funded IT programs.
- Alaska: None as of this date.
- Albuquerque: The Site Managers have been working with the Project Managers to assign any required protocols.
- Bemidji: The Bemidji Area is currently working with the local utilities to address the communication connection requirements. No final plans have been developed.
- Billings: The Area has had to migrate over several of the energy management building systems to the IHS network due to connectivity issues with Internet modems. This has created additional planning and communication with the IT staff both at the Area level as well as at the installation.
- California: There are no Federally-owned facilities in this Area.
- Nashville: N/A
- Navajo: IT would be involved in the early stages of the project.
- Oklahoma City: None. Planning and design is currently underway for incorporating the planned metering into the DDC systems at the hospitals. Planning and design has still not been initiated for the remaining clinics.
- Phoenix: No activity.
- Portland: None, no remote meters at any service unit.
- Tucson: None, we are not conducting any new construction.

7. Metering Training

Both the Senior OPDIV Official and the Agency Energy Coordinator have attended HHS sponsored training sessions related to metering/advanced metering. The Agency Energy Coordinator has also attended several other metering/advanced metering training sessions sponsored by DOE as well as sessions offered in conjunction with energy conferences.

Aberdeen: The Aberdeen Area has not yet provided any in-house training opportunities for our Service Unit Facilities Managers or the Area Facilities staff. As funding and time permits the Area Facilities program will encourage the FM staff and SU FM staff to include professional development courses that include metering technology and opportunities that exist in energy savings by utilization of the data afforded by the metering systems. Typically our projects for the installation of power meters in the 2009 reporting period included a requirement for the installation contractor to provide a minimum of 4 hours of training relative to the new front-end BAS, i.e. the network workstation that the power meters are monitored by and where the data collected from the power meters is stored.

Alaska: None, however, the Area Energy Coordinator would like to attend when one is offered.

Albuquerque: None have attended any metering training for this year.

Bemidji: One. The facility manager at White Earth Health Center has experience with metering.

Billings: The Deputy Director of Facilities Management (and current Energy Coordinator) has attended a national training on metering and has since provided the same training to all facility managers within the Billings Area. This represents approximately ten additional employees.

California: There are no Federally-owned facilities in this Area.

Nashville: None.

Navajo: At least one Area staff and four field staff have had advanced metering training online.

Oklahoma City: Not counting previous employees, there is one currently, Director of Facilities Management.

Phoenix: No employees have attended metering or energy training.

Portland: None.

Tucson: None.

8. Metering Installation Progress

See Attachment C for the IHS cumulative metering schedule.

Aberdeen: Aberdeen Area has complied with the Agency and Area metering plan. We currently have one location slated to receive an advanced electrical meter (Rosebud IHS hospital) - and that location is planned for the 2010 reporting year.

Alaska: Although we will not meet this date (December 31, 2009) we are striving to meet the requirement as soon as practical.

Albuquerque: The Contractor is currently working on the installation requirements. The metering will not be fully operable by the end of the year.

Bemidji: The Red Lake Hospital has an advanced meter installed, but it is not connected to a communication network. Still working with the utility company to install this connection by December 31, 2009.

The White Earth Health Center has advanced meters installed as part of the diesel generator power supply utilized during peak loading. These meters are still not connected to the utility company. Still working with the company to complete these connections by December 31, 2009.

The Cass Lake Hospital has a standard meter installed. An advanced meter is not required since the building is under 7,000 GSM.

The other federal facilities in the Bemidji Area do not require advanced metering and are monitored with standard meters.

Billings: Crow Hospital - complete;
Fort Belknap Hospital - complete;
Browning Hospital - scheduled for FY-2010.

California: There are no Federally-owned facilities in this Area.

Nashville: All buildings are separately metered and no advanced metering is required.

Navajo: Crownpoint is scheduled to have an advanced meter installed in FY-2010.

Oklahoma City: No progress.

Phoenix: All meters have been installed but none of them are capable of remote communication.

Portland: All meters meet the Executive Order requirements.

Tucson: No progress on advanced metering.

9. Metering Installation Progress Toward Fully Operable and Integrated Metering

The completed IHS Metering Plan and the Advanced Electrical Metering Specifications for IHS Buildings were distributed to the Area Offices and are available on the Division of Facilities Operations' Web site.

All standard meters required by the plan have been installed. Advanced meters are installed in over 51 percent of the required space exceeding the required 25 percent goal. One hundred percent of IHS electrical consumption is metered.

Aberdeen: 1) Fort Yates IHS Hospital, Fort Yates, North Dakota
2) The Aberdeen did not provide any advanced electrical meters in new construction during this reporting period. The facility currently under construction at Eagle Butte (Eagle Butte Health Center) will be provided with an advanced electrical meter as part of the construction process but that activity is not anticipated to be completed until early FY-2011.

Alaska: None as of this date.

Albuquerque: The Santa Fe and Zuni hospitals both require advanced meters. This project is in progress.

Bemidji: The Bemidji Area does not have any additional sites including advanced meters not indicated on the Advanced meter Cumulative Plan.

No new buildings to report with standard or advanced meters.

Billings: Hays Health Center (Building 00001) - Installation Advanced Electric Meter.
Hays Ambulance Service Garage (Building 00002) - Installation Advanced Electric Meter through Hays Health Center.

Harlem Ambulance Service Garage (Building 00006) - Installation Advanced Electric Meter through Building 00005 Fort Belknap Hospital. A new natural gas meter (264936TC) was installed in 2007 for the building.

Lame Deer Health Center (Building 00006) has an advanced electrical installation meter and an advanced gas building meter. Storage building (Building 00007) has an advanced electrical installation meter through Building 00006.

California: There are no Federally-owned facilities in this Area.

Nashville: All buildings are separately metered.

Navajo: 1) Buildings that have advanced meters installed. a. Gallup Indian Medical Center b. Ft. Defiance Indian Hospital (new hospital).

2) No new buildings have been installed.

3) Crownpoint will have an advanced meter by September 30, 2010.

Oklahoma City: No meters were installed this year. However, all the buildings have standard metering.

Phoenix: No site has operable advanced electric metering systems.

Portland: A new building at Yakama is planned to be constructed by Fall 2010 with a separate standard meter for electricity and water use.

Tucson: We are planning on installing "smart" meters at San Xavier first and then expanding to Sells Hospital if they are useful.

10. Metering-related Consumption Reduction

Aberdeen: Because the Area's inventory of advanced meters is less than one year old the collection and compilation of data resulting from the meters has not spanned adequate seasonal operating periods that allow specificity in locating and quantifying all energy savings opportunities. It is noted that the information available via the advanced power monitors has illustrated several areas where low cost/no cost operational measures are appropriate methods to continue the Area's progress in reducing the energy use intensity and related demand charges and power factor deficiencies.

Alaska: N/A

Albuquerque: All projects that include equipment replacement and component repairs are replaced with more efficient and if possible with energy star related products. Most sites have started seeing minor reductions in consumption.

Bemidji: The Bemidji Area does not yet have a fully operational integrated metering system due to the lack of communication lines between the advanced meters and the local utility companies.

Billings: The Area has currently reduced its electrical energy intensity by 16 percent as compared to the 2003 baseline. Calculations were based on data from UFMS expenditures for FY-2009.

This was achieved through a combination of direct agency funding and no-cost corrective actions.

California: There are no Federally-owned facilities in this Area.

Nashville: N/A

Navajo: Through direct agency funding. Implement a lighting program to upgrade ballasts, motion sensors, daylight harvesting.

Oklahoma City: It is somewhat problematic trying to figure in BTU/GSF improvements Area-wide between 2003 and present when two new health centers were built during that period and the previous older facilities did not have a utility record database available for 2003. However, discounting those facilities in the calculations, the individual facilities percent change in BTU/GSF ranges from a decrease of 26.0 percent in Lawton to an increase of 10.5 percent in Claremore. The Area has an average weighted BTU/GSF improvement of 7.5 percent. We feel confident of reaching the 8 percent goal by 2011.

The improvements were through simple low cost corrective actions such as changing the temperature setbacks appropriately, swapping T-12 bulbs for T-8 bulbs and improving energy conservation habits of personnel. It is also very likely that much of the decrease in BTU/SF is a result of increase in business occupancy space versus hospital space with a corresponding dilution in space usage intensity.

Phoenix: None of the sites have operable advanced electric metering systems.

Portland: Energy consumption is similar to previous years of use.

Tucson: We will meet the reduction by improved efficiency and planned on-site solar generation.

11. Time-based Rate Programs

Aberdeen: The Area is served by multiple electrical utilities - ranging from very small electrical cooperatives to very large electrical utilities who generate their own power. At all large Installations (typically our in patient facilities and large health centers) the utility rate structures include off peak and on peak rates. Although there is not an Area-wide participation, due to the large number of utilities we obtain services from, the Area is exploring cost effective methods to integrate operational strategies that may result in at least some of our larger peak loads to be shifted to off peak hours - where possible. These will typically require careful, and exhaustive, studies to ensure the quality and level of health care services are not reduced or jeopardized from the actions.

Alaska: None are available at present.

Albuquerque: No, this has not been fully researched to determine if the Installation will meet the demand structures that may be available through PNM.

Bemidji: The Bemidji Area White Earth Health Center operates on a time based rate program. During peak loading, an on-site diesel generator supplies electricity to the entire facility. The participation is not Area-wide.

Billings: The Area's utility companies do not currently provide time-based rate programs.

California: There are no Federally-owned facilities in this Area.

Nashville: N/A

Navajo: The Navajo Tribal Utility Authority, our main utility provider (gas, electrical), does not offer time-based rate programs.

Oklahoma City: No. Additional investigation and planning is still required.

Phoenix: The Area does not have the resources to participate in utility programs.

Portland: These programs have not been pursued.

Tucson: Not offered.

E. Federal Building Energy Efficiency Standards

See worksheet titled List of New Federal Building Designs and Construction in Attachment A.

Aberdeen: The design process (via a PL 93-638 contract) was initiated in FY-2009 for the new staff housing (133 units) to be provided for the new Eagle Butte Health Center. The regional engineering services office (DES-Seattle) is the contracting authority for this project and has the ultimate authority for approving the final design that will be completed by the Cheyenne River Sioux Tribe. The Aberdeen Area and the Cheyenne River Service Unit totally endorse and support the need to ensure these new staff housing units are in full compliance with the Federal Building energy efficiency standards.

Alaska: Nome and Barrow hospitals. This information will be provided (updated) when available.

Albuquerque: No new buildings.

Bemidji: The Bemidji Area is currently in the construction phase of an addition to the Red Lake Hospital. The addition was designed with the goal to achieve 30 percent below ANSI/ASHRAE/IESNA Standard 90.1-2004.

Billings: Quarters 108 - 2 Bedroom
Quarters 109 - 3 Bedroom
Quarters 110 - 3 Bedroom
Quarters 111 - 3 Bedroom
Quarters 112 - 3 Bedroom
Quarters 122 - 2 Bedroom
Quarters 123 - 3 Bedroom
Quarters 124 - 3 Bedroom
Quarters 125 - 3 Bedroom
Quarters 126 - 3 Bedroom
Quarters 119A - 1 Bedroom
Quarters 119B - 1 Bedroom
Quarters 119C - 1 Bedroom
Quarters 119D - 1 Bedroom
Quarters 119E - 1 Bedroom
Quarters 119F - 1 Bedroom

California: There are no Federally-owned facilities in this Area.

Nashville: N/A

Navajo: Kayenta Hospital. Our goals for the new facility: 1. Comply with E.O 13423. EPAAct 2005 Section 109 energy consumption levels that are at least 30 percent below the established in ASHRAE standard 90.1-2004 and 2. Achieve Basic Certification per LEED-NC 2.2

Oklahoma City: None.

Phoenix: San Carlos is being designed and constructed via a P.L. 93-638 contract. It is hoped that they will meet the Federal building standards.

Yuma is being designed to meet the Federal standards.

Portland: A new building at the Yakima Service Unit is currently in the design phase with plan for approximately 5,000 sq ft of space. The scope of work requires that the building follow the ASHRAE Advanced Energy Design Guide for Small Office Buildings in order of achieving a 30 percent reduction in energy use as compared to ASHRAE 90.1- 2004.

Tucson: None

III. Implementation Highlights of FY 2009

A. Life-Cycle Cost Analysis

The Division of Engineering Services is responsible for assuring life-cycle cost analyses are performed for all new construction and major renovation projects. The Division of Facilities Planning and Construction assures they are completed for new construction projects.

Aberdeen: Collaboration and review of major projects that are planned, designed and constructed via the Area Office resources is accomplished typically in a peer to peer review process by the Area Facilities Engineering staff. Frequently staff engineers who are responsible for the project development and eventual project construction do not have adequate expertise or experience related to building systems or construction materials and techniques that are outside their field of practice. The Area staff also includes a number of engineers who have very limited experience in the "facilities" field and the peer to peer reviews accomplish both the quality control function and help identify any weaknesses relating to energy consumption or efficiencies of systems or facility arrangements. A project to replace the Rosebud hospital chilled water production equipment is currently in the solicitation phase. In lieu of the contract award based solely on the lowest first cost the project specifications and solicitation package were written to allow the project to be awarded based on "best value to the government." Because chilled water equipment, i.e. chiller compressors and pumping consume great quantities of electrical power, this "best value" procurement will ensure that the systems selected and installed have the highest economical "present value" and allow for investment in higher quality of systems, i.e. first cost for the improvements, but reduced operating cost and less energy consumption over the life of the project.

Alaska: This data is not available at present but will be updated as soon as it is available.

Albuquerque: The project managers perform life cycle cost analysis when reviewing projects. Most projects selected are based on need and priorities at the service units.

Bemidji: The Bemidji Area utilizes life cycle cost analysis to assist in determining pay back periods for projects. Life cycle costs were included for projects identified in the recent Energy Audits, completed FY-2009. The Bemidji Area is currently utilizing these reports to plan for energy related projects for FY-2010. Five projects have been identified for FY-2010. The project costs and estimated reductions are listed in the Installation Level Energy Management Data obligations for 2010.

Billings: A life-cycle cost analysis is required per the Area's energy awards program but is not formally required in capital budgeting decisions.

California: There are no Federally-owned facilities in this Area.

Nashville: N/A

Navajo: Facility managers have been made aware of implementing life-cost cost analysis for new construction and renovations and products. Life Cost analysis through Services is difficult through our major energy provider, The Navajo Tribal Utility Authority. They are the sole provider for a majority of our locations.

Oklahoma City: Life-cycle cost analysis not performed in FY-2009.

Phoenix: No efforts towards life-cycle cost analysis have been made.

Portland: Life-cycle cost analysis was used to justify an upgrade to a higher efficiency boiler in a replacement project.

Tucson: Tucson Area does not have the funding to make these decisions often, but we are in the decision-making phase of solar projects at San Simon and Santa Rosa. We have to decide whether a power purchase agreement or outright purchase is the way to go for the proposed on-site generation.

B. Retrofits and Capital Improvement Projects

The Area Offices are responsible for assuring energy efficiency is improved in renovation and expansion projects. The Division of Facilities Planning and Construction requires that the Area Offices state these goals in their planning documents. The Division of Engineering Services reviews all life-cycle cost analysis reports submitted in association with new construction projects.

Aberdeen: Quality control measures in the planning, design, and construction of capital improvement projects is accomplished by Area Facilities staff and Service Unit FM staff. In addition the prioritization of projects for funding includes factors associated with the reduction of energy, i.e. improving the performance of a facility's thermal envelope, replacing old, inefficient motors with new high efficiency motors, replacing old lighting systems with new, modern high efficiency lighting systems will rank higher than projects that only replace equipment - without regard for a focus on efficiency.

Alaska: The new Area Energy Coordinator will work with all THO's to assure that the audits get done and that the water and energy conservation measures identified get implemented.

Albuquerque: Area-wide mechanical and electrical improvement projects involve replacing equipment with more efficient systems and controls for integration into the overall controls project.

Bemidji: The Bemidji Area includes energy saving projects in the annual Facility Engineering Program Plan. These projects consist of both projects completed using annual funding as well as pool projects for larger projects with higher costs. The Bemidji Area completed energy audits for all of the six federal facilities in FY-2009. The White Earth Health Center also installed timers on the isolation room fans to turn off fans one hour after the lights have been turned off to reduce runs times when not occupied.

Billings: The Northern Cheyenne Clinic (built in 1999) was identified as the most energy intensive building within the Area in FY-07. In an effort to improve energy efficiency, the Area in cooperation with the service unit has awarded several contracts to upgrade its building controls, replace malfunctioning equipment, and reconfigure the hot water piping to allow for variable speed pumping. All projects are anticipated to be complete by the end of the calendar year 2009.

California: There are no Federally-owned facilities in this Area.

Nashville: During 2008 the Unity Healing Center underwent major renovations. The old fuel oil cast iron sectional boiler was removed and replaced with a high efficiency natural gas fired boiler. This had aided in reducing our overall heating costs. The old chiller was replaced with a new higher efficiency chiller. The exterior walls of the facility consisted of eight inches of rock and four inches of brick on the interior overlaid with sheet rock. No insulation was present. All exterior walls were furred out to add R-19 insulation. This has proved to have better comfort control for all occupants of the building. Previously all units in the building were under manual control at each unit. This has been centralized though the use of a building automation system. Controls and limits can be set to assure that the building runs as efficiently as possible. It was found that the initial programming of the system caused the units to cycle from heating to cooling back to heating again providing very uncomfortable conditions for the occupants. Additional lockouts were programmed into the system and seem to have corrected the problem. We should see a decrease in the natural gas usage and electrical chiller usage during the next Fiscal Year.

Navajo: A review of lighting systems will be investigated at major Installations.

Oklahoma City: ARRA project to replace the aging boilers at the Lawton Indian Hospital incorporated the latest energy efficiency design considerations by the Benham Company Design Group. This engineering firm will also inspect and commission the boiler installation.

Phoenix: The Area has completed lighting retrofits and installation of programmable thermostats via the use of an Area Personal Services Electrical Contractor. The following service units participated: Yuma, San Carlos, Desert Visions, U&O, Moapa and Whiteriver. Controls have been added to the Yuma power plant to reduce run time of the Chillers.

Portland: Virtually all current projects have at least one component to provide for energy conservation.

Tucson: We are in the middle of a \$2.5 million dollar plant renovation at the Sells Hospital. The new chillers and boilers should be much more efficient than the 1960 models. We should also see some savings in better controls and new ductwork.

C. Use of Performance Contracts

1. Energy-Savings Performance Contracts (ESPC's)

Aberdeen: The Aberdeen Area did not utilize Energy Savings Performance Contracts during the 2009 reporting period.

Alaska: No ESPC's are in place. They will be evaluated as the audits are completed.

Albuquerque: No ESPC's to report.

Bemidji: The Bemidji Area did not enter into any ESPC's during FY-2009.

Billings: ESPC contracts are not being utilized at this time.

California: There are no Federally-owned facilities in this Area.

Nashville: No ESPC's.

Navajo: No ESPC's.

Oklahoma City: ESPC's were not used in FY-2009.

Phoenix: No ESPC's were used. The Area does not have the resources to investigate or implement ESPC's.

Portland: No ESPC's were used as facility size doesn't warrant use of ESPC.

Tucson: None issued.

2. Utility Energy Services Contracts (UESC's)

Aberdeen: The Aberdeen Area did not utilize Utility Energy Service Contracts during the 2009 reporting period.

Alaska: No UESC's are in place. They will be evaluated over time.

Albuquerque: No UESC's to report.

Bemidji: The Bemidji Area did not enter into any UESC's for FY-2009.

Billings: UESC's are not being utilized at this time.

California: There are no Federally-owned facilities in this Area.

Nashville: No UESC's.

Navajo: No related programs will be UESC.

Oklahoma City: UESC's were not used in FY-2009

Phoenix: No UESC's were used. The Area does not have the resources in investigate or implement UESC's

Portland: No UESC's were used in FY-2009.

Tucson: None issued.

D. Use of ENERGY STAR® and Other Energy-Efficient Products

Use of Energy Star products is required in new construction projects. New staff quarters will include Energy Star products and appliances.

Aberdeen: The Area Facilities Management program has been very proactive in ensuring Service Unit Facilities Management staff include all applicable performance and efficiency standards in any local procurement actions completed at the Service Units. In addition the Area Facilities Management program has provided training/education to our Area FM staff and SU FM staff at our bi-annual meetings to ensure that staff are aware of the latest, and most current requirements. Area staff have developed model policies and procedures to help guide SU FM staff, and SU procurement programs in specification and procurement of Energy Star products typically procured at the local level - such as residential appliances, water heaters, furnaces, heat pumps, etc. During the preparation and review of procurement documents that are prepared by in-house staff at the Area level there is a conscious effort to ensure that all applicable references to performance, materials, and efficiencies as identified by DOE, EERE, DOA, EPA and related Public Law or Executive Orders are included in the specifications for the projects.

Alaska: A program for the purchase of Energy Star products is being developed.

Albuquerque: The Area continues to promote procurement and specification of Energy Star products.

Bemidji: The Bemidji Area promotes the use of ENERGY STAR products and incorporates this into specifications for new products.

Billings: The Area continues to promote ENERGY STAR products when specifying or purchasing equipment.

California: There are no Federally-owned facilities in this Area.

Nashville: All new procurements recommend ENERGY STAR® when appropriate.

Navajo: Energy Efficiency criteria have been incorporated into all guide specs for new construction and renovation. Also contracts and grants have been made aware of Energy Star being purchased through their office.

Oklahoma City: The OCA Jobs Order Contractor is required to use and track the use of Green products, including ENERGY STAR products. This JOC Contractor already has a good reputation for incorporating ENERGY STAR products into their job submittals and keeping a ready list to show all such products used in each project.

Phoenix: ENERGY STAR is incorporated into the standard specifications.

Portland: ENERGY STAR specifications have become a requirement for all appliances associated with HFE projects.

Tucson: We have begun to require Energy Star rated products for the new construction projects handled through the Facilities Program. The EMS team has recommended that the same requirement be used for contracting of equipment.

E. Sustainable Building Design and High-Performance Buildings

The Indian Health Service incorporates the principles of the Federal Leadership in High Performance and Sustainable Buildings Memorandum of Understanding. The design of the Kayenta replacement facility began in FY-2007 and when constructed will be both LEED and Green Globes certified. All buildings whose designs started in FY-2007 or after will meet or exceed the Federal building efficiency standards. A listing of buildings whose designs began in FY-2007 or after can be found in Attachment A.

Aberdeen: New facilities currently under design within the Aberdeen Area include the P.L. 93-638 design and construction of 133 staff housing units for the Eagle Butte Health Center. Because the contracting authority and final review and approval authority for the planning, design and construction phase of this project is vested with the regional Engineering Services offices the Area program is not in a direct role to determine the context or substance of the language of the contract. However the Area and the Cheyenne River Service Unit are strong advocates and are working jointly with the regional office to ensure that all sustainable building design principle are reflected in the final product that the tribe will provide the Government.

Alaska: The answer to this question will be provided as soon as it is available.

Albuquerque: No information to report.

Bemidji: The addition designed for the Red Lake Hospital was designed with sustainable building design principles and is anticipated to meet the requirement to be 30 percent below ANSI/ASHRAE/IESNA Standard 90.1-2004.

Billings: Sustainable building practices, to a degree, have always played a part in new facilities. Whether it is energy efficiency, proper site selection, or IEQ, it is always in the best interest of the owner and occupants to incorporate as many sustainable building practices as practicable.

California: There are no Federally-owned facilities in this Area.

Nashville: N/A

Navajo: Dilkon health care facility will incorporate sustainable building design in the process.

Oklahoma City: No new building design was performed in FY-2009.

Phoenix: Sustainable building principals are considered in all project designs.

Portland: Sustainable building design is incorporated in all new facilities. The methods, requirements, and design practices utilize guidance from USGBC's LEED certification requirements.

Tucson: No new facilities.

F. Energy Efficiency/Sustainable Design in Lease Provisions

GSA is including energy and water requirements in all new GSA leases. On renewal of existing tribal leases, the Lease Contracting Officer seeks solar screening, energy-efficient lighting, and when replaced, water efficient plumbing fixtures.

Aberdeen: The requirements of the EISA 2007 and applicable Agency or Department standards would be included in the solicitation and eventual leasing language.

Alaska: A protocol for these items is being developed.

Albuquerque: Tribes are encouraged to utilize sustainable building design and incorporate energy efficiency standards in their facilities.

Bemidji: The Bemidji Area utilizes leased office space for field offices. Sustainable building principles are reviewed and considered when choosing lease space.

Billings: Currently not being addressed in leases.

California: There are no Federally-owned facilities in this Area.

Nashville: Newer buildings are preferred as they are more energy efficient than older buildings.

Navajo: I don't know what is considered in lease agreements for the Navajo Area as they are coordinated by the Lease Contracting Officer.

Oklahoma City: Due to change in Realty Officer and Area Energy Coordinator this year, information regarding this effort was not available.

Phoenix: Leases are handled through ES-Dallas and they have incorporated the requirements in the SFO's.

Portland: Leased space through GSA is required to meet LEED certification.

Tucson: No new leases.

G. Distributed Generation, including combined cooling, heating, and power systems

A ground-source heat pump has been incorporated into the design of the Cheyenne River Health Center currently under construction.

Aberdeen: No activity or projects of this type completed in the Aberdeen Area in the 2009 reporting period.

Alaska: None of these technologies have been implemented to date.

Albuquerque: No new information to report.

Bemidji: The Bemidji Area did not install any new non-renewable distributed generation in FY-2009.

Billings: Nothing to report to date.

California: There are no Federally-owned facilities in this Area.

Nashville: N/A

Navajo: The Area has been discussing using solar hot water heating at various clinics.

Oklahoma City: No new non-renewable distributed generation technologies were installed in FY-2009.

Phoenix: No activity in new non-renewable distributed generation technologies.

Portland: No projects are implemented.

Tucson: None Planned.

IV. Data Tables and Inventories

A. FY 2009 Annual Energy Management Data Report

See Attachment A.

B. Excluded Facilities Inventory

See Attachment B for a listing of excluded facilities with their associated exclusion codes.

Attachment A

FY-2009 OPDIV Energy Management Data Report

Indian Health Service FY 2009 Energy Management Performance Summary

Goal Performance

Energy Management Requirement	FY 2003 Btu/GSF	FY 2009 Btu/GSF	Percent Change 2003 - 2009	FY 2009 Goal Target
Reduction in energy intensity in facilities subject to the NECPA/E.O. 13423 goals	199,616	185,355	-7.1%	-12.0%

Renewable Energy Requirement	Renewable Electricity Use (MWH)	Total Electricity Use (MWH)	Percentage	FY 2009 Goal Target
Eligible renewable electricity use as a percentage of total electricity use	12,721.6	165,763.9	7.7%	3.0%

Water Intensity Reduction Goal	FY 2007 Gallon/GSF	FY 2009 Gallon/GSF	Percent Change 2007 - 2009	FY 2009 Goal Target
Reduction in potable water consumption intensity	36.0	40.9	13.7%	-4.0%

Metering of Electricity Use	Cumulative # of Buildings Metered	Cumulative % of Electricity Metered	Cumulative % of Appropriate Buildings Metered	FY 2012 Goal Target
Standard Electricity Meters in FY 2009	501	67.7%	97.3%	100%
Advanced Electricity Meters in FY 2009	14	32.3%	2.7%	Maximum Extent Practicable
Total Electricity Meters in FY 2009	515	100.0%	100.0%	

Federal Building Energy Efficiency Standards	Percent of New Building Designs	FY 2007 forward Goal Target
Percent of new building designs started since beginning of FY 2007 that are 30 percent more energy efficient than relevant code, where life-cycle cost effective:	90%	100%

Investments in Energy and Water Management

Sources of Investment	Investment Value (Thou. \$)	Anticipated Annual Savings (Million Btu)
Direct obligations for facility energy efficiency improvements	\$3,081.6	890.5
Investment value of ESPC Task/Delivery Orders awarded in fiscal year	\$0.0	0.0
Investment value of UESC Task/Delivery Orders awarded in fiscal year	\$0.0	0.0
Total	\$3,081.6	890.5

	Percentage
Total investment as a percentage of total facility energy costs	12.8%
Financed (ESPC/UESC) investment as a percentage of total facility energy costs	0.0%

FY 2009 ENERGY MANAGEMENT DATA REPORT

Agency: Indian Health Service
 Date: 30-Nov-09

Prepared by: CDR Gordon Delchamps, P.E., CEM
 Phone: 301-443-1367

PART 1: ENERGY/WATER CONSUMPTION AND COST DATA

1-1. NECPA/E.O. 13423 Goal Subject Buildings

Energy Type	Consumption Units	Annual Consumption	Annual Cost (Thou. \$)	Unit Cost (\$)	Site-Delivered Btu (Billion)	Est. Source Btu (Billion)	Est. GHG Emissions (MTCO ₂ e)	
Electricity	MWH	154,667.3	\$15,360.1	\$0.10 /kWh	527.73	1,832.8	98,582	
Fuel Oil	Thou. Gal.	1,556.5	\$2,711.2	\$1.74 /gallon	215.9	215.9	15,835	
Natural Gas	Thou. Cubic Ft.	383,556.8	\$3,466.6	\$9.04 /Thou Cu Ft	395.4	395.4	21,018	
LPG/Propane	Thou. Gal.	1,040.2	\$1,820.4	\$1.75 /gallon	99.3	99.3	6,192	
Coal	S. Ton	0.0	\$0.0	#DIV/0! /S. Ton	0.0	0.0	0	
Purch. Steam	BBtu	0.0	\$0.0	#DIV/0! /MMBtu	0.0	0.0	0	
Other	BBtu	0.0	\$0.0	#DIV/0! /MMBtu	0.0	0.0	0	
Purch. Renew. Electric.	MWH	11,096.6	\$654.5	\$0.06 /kWh	37.9			
Purch. Renew. Other	BBtu	0.0	\$0.0	#DIV/0! /MMBtu	0.0			
		Total Costs:	\$24,012.8		Total:	1,276.3	2,543.5	141,628
FY 2009 Goal Subject Buildings Gross Square Feet (Thousands)		6,651.3			Btu/GSF:	191,881	382,404	
Goal Subject Buildings FY 2003 Baseline (Btu/GSF)		199,616			Btu/GSF w/ RE Purchase Credit:	185,355		
					Btu/GSF w/ RE & Source Btu Credit:	185,355		

1-2. NECPA/E.O. 13423 Goal Excluded Facilities

Energy Type	Consumption Units	Annual Consumption	Annual Cost (Thou. \$)	Unit Cost (\$)	Site-Delivered Btu (Billion)	Est. Source Btu (Billion)	Est. GHG Emissions (MTCO ₂ e)	
Electricity	MWH	0.0	\$0.0	#DIV/0! /kWh	0.0	0.0	0

1-3. Non-Fleet Vehicles and Other Equipment (Does not include Fleet Vehicle Data Captured by FAST System)

	Consumption Units	Annual Consumption	Annual Cost (Thou. \$)	Unit Cost (\$)	Btu (Billion)	Est. GHG Emissions (MTCO ₂)
Auto Gasoline	Thou. Gal.	0.0	\$0.0	#DIV/0! /gallon	0.0	0
Diesel-Distillate	Thou. Gal.	0.0	\$0.0	#DIV/0! /gallon	0.0	0
LPG/Propane	Thou. Gal.	0.0	\$0.0	#DIV/0! /gallon	0.0	0
Aviation Gasoline	Thou. Gal.	0.0	\$0.0	#DIV/0! /gallon	0.0	0
Jet Fuel	Thou. Gal.	0.0	\$0.0	#DIV/0! /gallon	0.0	0
Navy Special	Thou. Gal.	0.0	\$0.0	#DIV/0! /gallon	0.0	0
Other	BBtu	0.0	\$0.0	#DIV/0! /MMBtu	0.0	0
Total Costs:			\$0.0		0.0	0

Optional 1-3a. Fleet Vehicle Consumption and Costs Captured by the FAST System

(Input reflects format of Section IV, Part C, Annual Fuel Consumption Report, by Fuel Type of FAST SF 82 - Aggregate Combined Report)

Description	Consumption Units	Annual Consumption	Annual Cost (Actual \$)	Btu (Billion)
Biodiesel	GEG	0.0	\$0.0	0.0
Diesel	GEG	0.0	\$0.0	0.0
Electric	GEG	0.0	\$0.0	0.0
E-85	GEG	0.0	\$0.0	0.0
Gasoline	GEG	0.0	\$0.0	0.0
Hydrogen	GEG	0.0	\$0.0	0.0
M-85	GEG	0.0	\$0.0	0.0
LPG	GEG	0.0	\$0.0	0.0
NG	GEG	0.0	\$0.0	0.0
Other	GEG	0.0	\$0.0	0.0
TOTAL	GEG	0.0	\$0.0	0.0

1-4. RENEWABLE ENERGY GENERATED ON FEDERAL OR INDIAN LAND WHERE RECS ARE RETAINED BY THE GOVERNMENT

(New renewable energy is from projects placed in service after January 1, 1999. Include projects that did not retain RECs if they qualify under the grandfather clause.)

Renewable energy project types in service during FY 2009, by age and source	Number of Projects	Annual Energy Produced	Energy Produced on Federal or Indian Land and Used at a Federal Facility
Electricity from <i>New Solar</i> projects (MWH)	0	0.0	0.0
Electricity from <i>New Wind</i> projects (MWH)	0	0.0	0.0
Electricity from <i>New Biomass</i> projects (MWH)	0	0.0	0.0
Electricity from <i>New Landfill Gas</i> projects (MWH)	0	0.0	0.0
Electricity from <i>New Geothermal</i> projects (MWH)	0	0.0	0.0
Electricity from <i>New Hydro/Ocean</i> projects (MWH)	0	0.0	0.0
Electricity from <i>Old Solar</i> projects (MWH)	0	0.0	0.0
Electricity from <i>Old Wind</i> projects (MWH)	0	0.0	0.0
Electricity from <i>Old Biomass</i> projects (MWH)	0	0.0	0.0
Electricity from <i>Old Landfill Gas</i> projects (MWH)	0	0.0	0.0
Electricity from <i>Old Geothermal</i> projects (MWH)	0	0.0	0.0
Electricity from <i>Old Hydro/Ocean</i> projects (MWH)	0	0.0	0.0
Natural Gas from <i>New Landfill/Biomass</i> projects (Million Btu)	0	0.0	0.0
Renewable Thermal Energy from <i>New</i> projects (Million Btu)	0	0.0	0.0
Other <i>New</i> Renewable Energy (<i>Specify Type</i>) (Million Btu)	0	0.0	0.0
Natural Gas from <i>Old Landfill/Biomass</i> projects (Million Btu)	0	0.0	0.0
Renewable Thermal Energy from <i>Old</i> projects (Million Btu)	0	0.0	0.0
Other <i>Old</i> Renewable Energy (<i>Specify Type</i>) (Million Btu)	0	0.0	0.0
Total New Renewable Electricity (MWH)	0	0.0	0.0
Total Old Renewable Electricity (MWH)	0	0.0	0.0
Total New Non-Electric Renewable Energy (Million Btu)	0	0.0	0.0
Total Old Non-Electric Renewable Energy (Million Btu)	0	0.0	0.0
Total Renewable Energy Generation (Million Btu)	0	0.0	0.0

1-5. ON-SITE RENEWABLE ENERGY GENERATION WHERE RECS ARE NOT RETAINED BY THE GOVERNMENT

(This energy is only counted toward the renewable energy goal if the agency has enough new RECs to qualify for the on-site bonus.)

	Amount Produced or Used	Amount Qualified for Goal
Renewable energy reported here comes from projects: 1) placed in service after 1/1/1999 (New) ; 2) where RECs have not been retained by the government; 3) where the amount has not been reported elsewhere on this data report; and 4) where the energy or RECs have not been sold to another agency that is counting it toward their renewable energy goal. (MWH)	0.0	0.0
Renewable energy reported here must come from projects: 1) placed in service before 1/1/1999 (Old) ; 2) where RECs have not been retained by the government; 3) where the amount has not been reported elsewhere on this data report; and 4) where the energy or RECs have not been sold to another agency that is counting it toward their renewable energy goal. (MWH)	0.0	0.0

1-6. RENEWABLE ENERGY/RENEWABLE ENERGY CERTIFICATE PURCHASES IN FY 2009

(New renewable energy is from resources developed after January 1, 1999)

Type of Renewable Energy Purchase (Two rows are provided for each type. Insert additional rows as necessary for purchases of same type for different end-use categories (Goal or Excluded) or purchase terms (Short or Long). Insert rows between each color-coded category.)	Total Amount Purchased (MWH)	Total Amount Purchased (Million Btu)	Annual Cost (Thou. \$)	Portion of Total Purchased from Projects on Federal or Indian Lands	FY 2009 Goal Application Renewable Energy Goal (RE) Energy Efficiency Goal (EE) Credit	Purchase Term (Enter: Short or Long)	End Use Category (Enter: Goal or Excluded)	Total Amount Purchased for Goal Buildings (Billion Btu)	Total Amount Purchased for Excluded Fac. (Billion Btu)
Electricity from <i>New</i> Renewable Source	3,055.3		\$166.8	0.0	RE: 100% EE-Credit: Up to 5.4% reduction for short-term and 7.2% reduction for long-term.	Short	Goal	10.4	0.0

1-7. GOAL-ELIGIBLE RENEWABLE ELECTRICITY USE AS A PERCENTAGE OF FACILITY ELECTRICITY USE

(Calculated from input above per FEMP Renewable Energy Guidance)

Components of Eligible RE Use	Renewable Electricity Use (MWH)	Total Facility Electricity Use (MWH)	RE as a Percentage of Electricity Use
Eligible Renewable Electricity Total	12,721.6	165,763.9	7.7%
New Renewable Electricity (without Bonus)	4,680.3		
Bonus, Federal or Indian Land	0.0		
Eligible Old Renewable Electricity	8,041.3		

1-8. ALL RENEWABLE ENERGY USE (INCLUDING NON-ELECTRIC) AS A PERCENTAGE OF FACILITY ELECTRICITY USE (WITHOUT BONUS)

(Calculated from input above for information only)

All Renewable Energy Use (Billion Btu)	Total Facility Electricity Use (Billion Btu)	RE as a Percentage of Energy Use
43.4	565.6	7.7%

1-9. WATER USE INTENSITY AND COST

Potable Water	Annual Consumption (Million Gallons)	Annual Cost (Thou. \$)	Facility Gross Square Feet (Thou.)	Gallons per Gross Square Foot
Buildings & Facilities Subject to Water Goal	272.3	\$1,663.9	6,651.3	40.9
				Percent
Approx. percentage of reported water consumption that is estimated:				0%
Is the FY 2007 agency water intensity baseline preliminary or final?				

PART 2: ENERGY EFFICIENCY IMPROVEMENTS

2-1. DIRECT AGENCY OBLIGATIONS

	FY 2009		Projected FY 2010	
	(Million Btu)	(Thou. \$)	(Million Btu)	(Thou. \$)
Direct obligations for facility energy efficiency improvements, including facility surveys/audits		\$3,081.6		\$3,565.6
Estimated annual savings anticipated from obligations	890.5	\$31.7	4,133.2	\$82.1

2-2. ENERGY SAVINGS PERFORMANCE CONTRACTS (ESPC)

	Annual savings (Million Btu)	(number/Thou. \$)
Number of ESPC Task/Delivery Orders awarded in fiscal year & annual energy (MMBTU) savings.	0.0	0
Investment value of ESPC Task/Delivery Orders awarded in fiscal year.		\$0.0
Amount privately financed under ESPC Task/Delivery Orders awarded in fiscal year.		\$0.0
Cumulative guaranteed cost savings of ESPCs awarded in fiscal year relative to the baseline spending.		\$0.0
Total contract award value of ESPCs awarded in fiscal year (sum of contractor payments for debt repayment, M&V, and other negotiated performance period services).		\$0.0
Total payments made to all ESPC contractors in fiscal year.		\$0.0

2-3. UTILITY ENERGY SERVICES CONTRACTS (UESC)

	Annual savings (Million Btu)	(number/Thou. \$)
Number of UESC Task/Delivery Orders awarded in fiscal year & annual energy (MMBTU) savings.	0.0	0
Investment value of UESC Task/Delivery Orders awarded in fiscal year.		\$0.0
Amount privately financed under UESC Task/Delivery Orders awarded in fiscal year.		\$0.0
Cumulative cost savings of UESCs awarded in fiscal year relative to the baseline spending.		\$0.0
Total contract award value of UESCs awarded in fiscal year (sum of payments for debt repayment and other negotiated performance period services).		\$0.0
Total payments made to all UESC contractors in fiscal year.		\$0.0

2-4. METERING OF ELECTRICITY USE

FY	Standard Meters		Advanced Meters		Appropriate Buildings	
	Cumulative # of Buildings Metered	Cumulative % of Electricity Metered	Cumulative # of Buildings Metered	Cumulative % of Electricity Metered	# of Appropriate Buildings for Metering	Cumulative % of Buildings Metered
2009	501	67.7%	14	32.3%	515	100.0%
2010 planned	497	62.4%	18	37.6%	515	100.0%

2-5. FEDERAL BUILDING ENERGY EFFICIENCY STANDARDS

	Number of New Building Designs
Total new building designs started since beginning of FY 2007:	163
Total new building designs started since beginning of FY 2007 that are expected to be 30 percent more energy efficient than relevant code, where life-cycle cost effective:	147
	Percent
Percent of new building designs started since beginning of FY 2007 that are expected to be 30 percent more energy efficient than relevant code, where life-cycle cost effective:	90%

2-6. TRAINING

	(number)	(Thou. \$)
Number of personnel trained in FY 2009/Expenditure	38	\$48.0

AGENCY COMPILATION WORKSHEET FOR CREDIT FOR PROJECTS THAT INCREASE SITE ENERGY USE BUT SAVE SOURCE ENERGY

(See http://www.eere.energy.gov/femp/pdfs/sec502e_%20guidance.pdf)

EPACT Goal Subject Buildings

Name of Project Saving Source Energy in Current Fiscal Year (insert additional rows as necessary)	Annual Site Energy Increase with the Project	Annual Source Energy Saved with the Project	Adjustment to Annual Site Energy
	(Million Btu)	(Million Btu)	(Million Btu)
