

RESOURCE AND PATIENT MANAGEMENT SYSTEM

Electronic Health Record (RPMS-EHR)

Installation Guide & Release Notes

Version 1.1
October 2007

Office of Information Technology (OIT)
Division of Information Resource Management
Albuquerque, New Mexico

Preface

This guide provides information regarding the loading and installation of the Indian Health Service RPMS Electronic Health Record v1.1 software.

TABLE OF CONTENTS

1.0 Installation Notes

Prefix: **ehr**

Current Version: **1.1**

Warning: Read entire notes file prior to attempting any installation.

1.1 General Information

- Make a copy of this distribution for offline storage.
- Print all notes/readme files.
- It is recommended that the terminal output during the installation be captured using an auxport printer attached to the terminal at which you are performing the software installation, or that it be captured by use of a host file. This will insure a printed audit trail if any problems should arise.
- This is a cumulative release for the EHR application. EHR version 1.0 and its patches are not required for installation.

1.2 Target Systems

The RPMS-EHR client application has been thoroughly tested and is supported on the following operating systems:

- Windows XP Home Edition
- Windows XP Professional
- Windows 2000

The application is not supported under Windows versions prior to Windows 2000. It has undergone minimal testing on the Windows Vista and Windows Server 2003 platforms.

Sites should ensure that client workstations have the most recent Windows updates. Particularly, the Microsoft .Net Framework version 2.0 and any patches to same should be installed on all workstations running the RPMS-EHR client application.

1.3 System Requirements

The following should be considered minimum system requirements for running the RPMS-EHR client application:

- Pentium (or equivalent) CPU at a minimum of 1 GHz effective clock speed.
- Minimum of 1 gigabyte of system RAM.
- Minimum of 1 gigabyte of free disk space.
- Minimum 10 megabit (100 megabit if imaging is in use) network interface card configured for LAN access.

1.4 New Features of Version 1.1

RPMS-EHR Version 1.1 contains the following enhancements and adjustments:

1.4.1 Alerts Cover Sheet

Rename space to BEH.

1.4.2 Allergies Cover Sheet

Rename space to BEH.

1.4.3 Chat Service

Recompiled with new Raize libraries.

1.4.4 Common Library

Corrected problem in which list grid did not refresh properly when modifying the RowCount property.

Added orcsDropDownList style to the combo box. It is the same as the orcsDropDown style, but does not allow text entry in the edit box.

Corrected a bug in data retrieval for long-list in which dragging the scrollbar button to an intermediate position could result in an empty list.

Corrected a bug in the object updates where the object source path was corrupted if it was an http or ftp URL reference.

Corrected a bug in which list grid did not always properly adjust row heights to accommodate cell contents.

Fixed bug where registering a component on-the-fly prevented its normal operation in the visual interface manager.

1.4.5 Communication Services

Added a new option to auto-size the sign-on dialog to fit the sign-on message.

Added the ability to specify the default formatting parameters for sign-on dialog in the vcBroker.ini file.

Added the ability to save sign-on dialog properties to the vcBroker.ini file, if the Server Edit parameter is set to 2.

Added an Apply button to the sign-on property dialog.

Added support for portable network graphics (PNG) image format.

Corrected a bug in the event subscription logic, which allowed a subscription request to be ignored if the session were already subscribed at a higher level for that event.

1.4.6 Component Support Services

Added VIM to list of object names recognized by the Replace Params method.

Fixed problem where a failed Visual Basic component could prevent normal shutdown of the application.

1.4.7 Consult Orders Cover Sheet

Rename space to BEH.

1.4.8 Consult Tracing

Rename space to BEH.

Component interaction disabled if patient context is null.

1.4.9 CPRS Context Adapter

Rename space to BEH.

1.4.10 CPRS Library

Rename space to BEH.

Major cleanup of original CPRS code. Includes improved code structure and formatting, inline documentation, removal of more than 30 memory leaks, and removal of redundant and unused code.

Icon legend no longer displays legends for components that are not present in the current environment.

1.4.11 Crisis Alerts Cover Sheet

Rename space to BEH.

1.4.12 CWAD

Rename space to BEH.

1.4.13 Dictation Component

Rename space to BEH.

Added the VISIT array node so that the Visit IEN would get set in the TIU Document.

1.4.14 Electronic Signature Service

Rename space to BEH.

Fixed bug that caused signature list to display improperly for users with ORELSE key.

1.4.15 Encounter Context Object

Rename space to BEH.

Modified to use IHS visit creation API.

Added dialog to show user similar visits when making a request to create one.

Added LOCKED property to indicate that a visit is locked and cannot be changed.

Added FORCEHANDLE property to allow a component to force the creation of a visit if one does not exist.

Added "Create a Visit Now" check box on new visit table to allow the user to force the creation of a new visit immediately.

Added a padlock icon on the visit list to indicate which visits are locked.

Type of visit on the new visit tab now defaults to the service category defined for the selected location in the CLINIC SETUP PARAMETERS file.

Added new visit summary report. This provides a more compact alternative to the old visit summary report.

Added support for additional visit service categories.

1.4.16 Encounter Information Header

Rename space to BEH.

Now displays the service category.

1.4.17 ESig Review Component

Rename space to BEH.

1.4.18 General Server

Consolidated all EHR configuration options under a single menu tree (BEHOMENU).

Package entity types for all parameters were changed to system entity types. Package entity types are problematic when used in parameter templates, because the default package is determined by the namespace of the template, rather than the individual parameters. Also, package entity types are problematic if the parameter is rename spaced. System entity types accomplish the same purpose without these side effects.

Corrected default patient report header so that it does not display patient age.

1.4.19 Health Factors Component

Ability to add comments to health factors.

1.4.20 Health Summary Viewer

Added new component for EHR toolbar to support so that a health summary (or other CPRS report) is displayed by clicking a button. This provides quick access to frequently used reports.

1.4.21 Historical Services Component

Simply addition of historical services and procedures with a pick list to facility entry of procedures reported in CRS.

1.4.22 Immunizations Component

EHR to display the IMMSEV forecast detail.

EHR to display an immunization's regular name form instead of the short name.

Sites can activate or activate patients from the immunization registry from the GUI.

1.4.23 Internet Explorer Component

The ALLOWNEWWINDOW property now defaults to true. Many of the problems reported for the IE component were related to the default setting of this property.

Enter key now works properly in web pages.

1.4.24 Lab Orders Cover Sheet

Rename space to BEH.

1.4.25 Lab Result Viewer

Rename space to BEH.

Component interaction will be disabled if patient context is null.

1.4.26 Medication Counseling

New component that provides support for automating the creation of visit, purpose of visit, and education event entries.

1.4.27 Medication Management

Added toolbar with buttons for new medication orders, processing existing medication orders, printing order summaries, and constraining the med list.

Added a function to process multiple medications. This function presents a medication order dialog for each selected medication with a list of valid actions, which may be performed. All valid order actions may be accomplished from this single interface. This should streamline the medication management task.

Added a toolbar button to constrain list to chronic medications only.

Added a toolbar button to constrain list to active medications only.

Added a toolbar button to allow setting the number of days back to retrieve medicines for the med list.

Added a toolbar button to print a medication summary. This summary may be restricted to chronic and/or active medications, and includes both short and long formats.

Added additional columns to list view for prescription number, ordering provider, issue date.

Added RTS (returned to stock) status, and removed last refill date for such medicines. Previously, one could not easily determine which medicines had been returned to stock. Requires APSP patch 1004.

Added a tooltip above status column to provide additional information about that status (supported for RTS and holds).

Added a button labeled “ADR’s” to medication order dialog, which brings up CWAD dialog when clicked for viewing ADR information. Permits viewing of a patient's recorded adverse reactions while ordering medications.

Added the ability to hide nonessential columns in the medication grid.

Added the ability to save column settings (width and visibility) on a per user basis.

Grid now shows alternate row shading to improve readability.

1.4.28 Medications Cover Sheet

Rename space to BEH.

1.4.29 Notifications

Added delete button and supporting code.

Added LEGEND property to support positioning legend on right or to completely hide it.

Addendum notifications are now deleted after viewing the addendum.

Corrected the problem where event callbacks may ignore setting of the "All Patients" checkbox.

Corrected problem where deleting an info-only alert also deleted the subsequent info-only alert.

Added sortable column for displaying date of notification delivery.

Modified indicator for info-only alert to improve appearance.

Column widths now saved with template snapshot.

1.4.30 Orders

Added required prompt to lab orders for clinical indication. Pick list pulled from POV and problem list with a provision for free text entry.

Modified the order action confirmation dialogs to be visually consistent, and more aesthetically pleasing.

Removed the write delayed orders button, and placed an entry in order list to do the same.

Order columns are now sort-able.

The ordering logic now honors the setting of the ORPF RESTRICT REQUESTOR parameter.

Rename space to BEH.

Component interaction disabled if patient context is null.

Sigs not calculated properly on complex dose tab of medication orders.

Added support for the ORWOR RX EXPIRED MAX parameter, which allows changing the setting of maximum days following expiration that a prescription may be renewed. This had previously been hard-coded to 120 days. Requires APSP patch 1004.

Removed the ORPF GRACE DAYS BEFORE PURGE parameter from ORP ORDER MISC parameter template, as purging of orders is not recommended.

Allow discontinuation of expired orders.

Added the ability to hide nonessential columns in order grid.

Added the ability to save column settings (width and visibility) on a per user basis.

Grid now shows alternate row shading to improve readability.

1.4.31 Patient Context Object

Setting default list to clinic does not function properly. Date range is not properly stored with the default list. Users will have to save not properly stored with the default list. Users will have to save the clinic as the default again after installing the new version.

Selecting a patient from a clinic list will now properly recognize a linked visit for the selected appointment.

Added support for temporary hospital record numbers.

Added Clear method to allow clearing patient context from a custom menu.

1.4.32 Patient Detail Component

Rename space to BEH.

Now disabled when no patient is selected.

1.4.33 Patient Education

Patient Education pick lists.

1.4.34 Patient ID Header

Rename space to BEH.

1.4.35 Patient Refusals

Populates missing Refusal Item field values in existing entries in PATIENT REFUSALS FOR SERVICE/NMI file.

Now stores Refusal Item for all refusals documented via the GUI.

1.4.36 Primary Care Header

Rename space to BEH.

The server code was modified to use IHS primary care and primary care team databases.

1.4.37 Print Service vcPrint.dll

Added the Print2 method, which extends the Print method by adding the ability to specify a printer type (local, remote, or last selected).

Added support for printing multiple copies.

Added dialog to allow the aborting of a print operation in progress.

Added Update Preview method to allow update of the contents of an existing print preview dialog.

Added ability to minimize/maximize preview window when shown amodally, and to maximize preview window when shown modally.

1.4.38 Problem List Cover Sheet

Rename space to BEH.

Caption now defaults to "Active Problem List".

1.4.39 Problem Management Component (Problem List)

Facilitate logical grouping of problem list via decimalization.

Facility sorting of problem list via prioritization.

1.4.40 Progress Notes

Rename space to BEH.

Component interaction disabled if patient context is null.

Dialog templates now request verification when Cancel button pressed.

Fixed defect where tree view gave appearance of multiple notes being edited concurrently.

Processing a progress note alert now sets the visit context to the associated visit.

1.4.41 Quick Order Wizard

Rename space to BEH.

1.4.42 Reminder Dialogs

Added support for new reminder dialog prompts for several PCC fields:

- Immunizations: site, lot, volume, vaccine information sheet date, refusals.
- Patient education: refusals, elapsed time, setting, goals, outcome.
- Skin tests: reading date, reading person, date given, refusals.
- Vital measurements: most common types.

Added scroll wheel mouse support to reminder dialogs.

1.4.43 Reminders Cover Sheet

Rename space to BEH.

1.4.44 Remote Data Component

Rename space to BEH.

1.4.45 Remote Views Service

Rename space to BEH.

1.4.46 Reports

Rename space to BEH.

Component interaction disabled if patient context is null.

Added supporting logic for "signing" of imaging alerts.

Fixed issue with imaging notification not finding target report if date range parameters were too narrow.

1.4.47 Spell Checking Service

Fixed problem with losing open Word document after performing spell check in EHR.

1.4.48 Super Bills Component

Sites can create pick list associations for procedures and services with any number of associated items (cpt codes, modifiers, education, health factors).

1.4.49 Telnet

Remaps +, -, /, and * keys on numeric keypad to be their normal ASCII equivalents.

1.4.50 Updated Utility

Added fade effect feature for splash screen. The fade entry in ini file controls availability and speed of this effect.

If an updated component fails to register properly, it will now be removed from the client. This prevents the situation where a component fails to register, but is left on the client machine. In this case, the updater will not attempt to copy this component again, since it is already present.

1.4.51 Visits Cover Sheet

Rename space to BEH.

1.4.52 Visit Services (VCPT Component)

Populate and display transaction code instead of CPT if a charge ticket is included.

1.4.53 Visual Interface Manager

Added Popup2 and BringToFront2 methods to allow invoking these operations from custom menus. The Popup and Bring To Front methods require an interface reference to function. This is not suitable for invocation from custom menus. These new methods allow passing a programmatic identifier in place of an interface reference.

Enhanced logic for streaming user interface layouts to templates to provide more control over ordering of child components. This enhancement improves dialogs that display layout information by forcing the ordering of child components to be consistent with their visual ordering.

Added clipboard support for design mode. Portions of the visual interface can be copied to and pasted from the clipboard. This is a significant enhancement to design mode, which facilitates copying user interface elements from one template to another.

Replaced the Delete Objects dialog with the Layout Manager. Like the Delete Object dialog, the Layout Manager displays objects in a tree view but allows multiple operations (cut, copy, paste, delete, move, set properties, display about box) to be performed on objects in one place. This is a significant enhancement to the design mode, which simplifies the manipulation of objects.

Added alignment grid to container objects.

Added option dialog to design mode to allow configuring alignment grid.

Changed the exception log dialog to be more aesthetically pleasing, and automatically resize to its contents.

Corrected the problem where popup dialogs from .Net components were visible when the application was locked.

Added support for portable network graphics (PNG) image formats.

Added support for Windows XP themes.

Added scroll wheel mouse support for scroll box stock object.

Fixed catastrophic error seen when scrolling a scroll box stock object containing other objects.

Added ReverseTabs property to tabbed notebook stock object.

Made change to allow application to run under Windows Vista operating system.

1.4.54 VueCentric System Manager

Removed CIAVM DEFAULT TARGET parameter. Instead, this setting is stored in the user settings area of the Window registry for each RPMS system. This has always been a source of confusion. Since this setting applies only to the vcManager utility and is really a user preference, it makes sense to make it a local user setting.

Added toolbar to Serializable properties tab to allow changing ordering and facilitate deletion of entries.

1.4.55 BGO Component Suite

Complete rewrite of client- and server-side code. Includes all PCC-related components.

Improved efficiency by eliminating redundant and unnecessary remote procedure calls.

All components are now compatible with new visit creation and editing rules.

Buttons and menu options enabled only if associated action is valid.

Improved error reporting.

Support for manual data refresh.

Automatic display refresh when viewed data changes.

Remote procedure calls are now performed through supported mechanism.

Improved support for entering and editing historical visit data and refusals.

Now uses supported API for visit creation.

Support for creating multiple chief complaint entries.

1.4.56 CWAD Component

Is now disabled when no patient is selected.

1.4.57 Vital Measurement Component

Can now select among three unit display options: metric, US, or default.

Can override default display units for any measurement type at several levels (user, site, etc.)

Added checkbox for suppressing display of percentiles when desired.

Improved operation of display grid on graphing dialog.

1.4.58 Vital Measurement Data Entry

Added support for using default units as unit of measurement for data entry.

2.2 Requirements

- VA Kernel v8.0 or later
- VA FileMan v22.0 or later
- Cache v5.0 or later

- BGU v1.5 or later
- APSP*7.0*1004
- OR*3.0*1001
- Immunization v8.1
- Microsoft .Net Framework v2.0 on client workstations

3.0 Installation Instructions

All EHR users should be logged off the system during the installation process. Other RPMS users may remain on the system.

3.1 Self-Extracting Archive

Step	Instructions
1	Execute the self-extracting archive (ehr_0110.exe) on the server where the RPMS-EHR shared folder resides.
2	When prompted for the installation folder, enter the full path to the shared folder where your bin and lib folders reside for the installation being updated.
3	Click the Unzip button to proceed with the extraction of compressed files.
4	When prompted, update any <i>ini</i> file settings if necessary and click OK. The VueCentric <i>ini</i> file will be updated with the new settings. Version numbers of new components will also be automatically updated at this time.

3.2 KIDS Distribution

Step	Instructions
1	Load the distribution (ehr_0110.k) into KIDS using <i>option 1</i> on the KIDS Installation menu.
2	Verify the checksums using <i>option 2</i> on the KIDS Installation Menu.
3	Consider using the options 3 and 4 on the KIDS Installation Menu to print and compare the transport.
4	Install the distribution using option 6 on the KIDS Installation Menu.
5	You may be informed that one or more builds have already been installed and be prompted to continue loading. Respond YES in each case.
6	You may be informed that one or more broker processes are currently running. This is normal. Respond by entering a "Y" at the prompt to continue the installation.
7	When prompted to enable VueCentric logins, respond by entering "Y".

Note: Review the system error trap following installation to verify that no errors occurred during installation. You may see the error <EDITED>^CIANBEVT in the error trap. This is normal and not cause for concern. Any other error occurring during the installation process may be an indication of a failed installation and should be investigated further.

4.0 Contact Information

If you have any questions or comments regarding this distribution, please contact the OIT Help Desk (IHS).

Phone: (505) 248-4371 or (888) 830-7280 (toll free)

Fax: (505) 248-4363

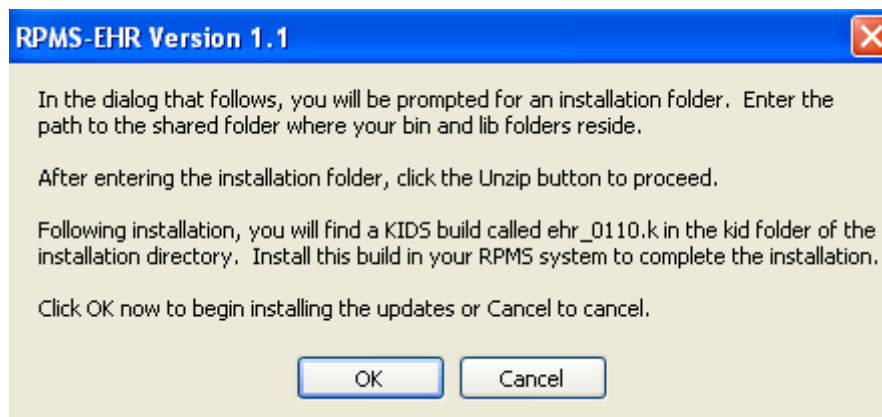

Web: <http://www.ihs.gov/GeneralWeb/HelpCenter/Helpdesk/index.cfm>

Email: support@ihs.gov

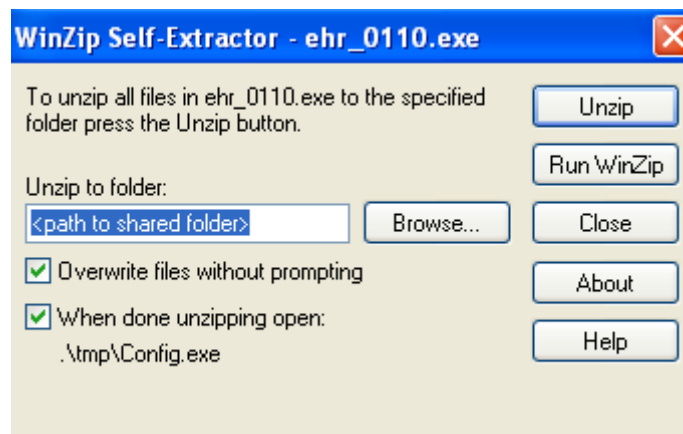

5.0 Appendix I – Client Installation

A self-extracting archive (file ehr_0110.exe) is provided for installation of the client application components. These components are to be installed in a shared folder on a file server. The EHR application will automatically deploy components from this location to the client workstations. All users of the EHR application should have read-only access to this folder.

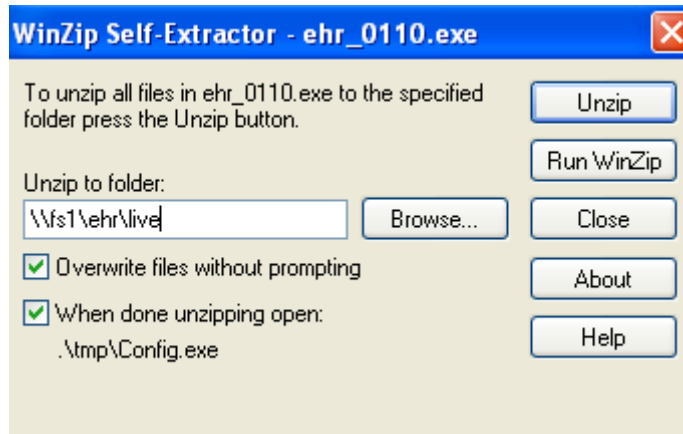

To install the client components to the shared folder, execute the self-extracting archive by double-clicking on the executable file. You must have read and write access to the shared folder to complete this installation. You will see the following dialog:

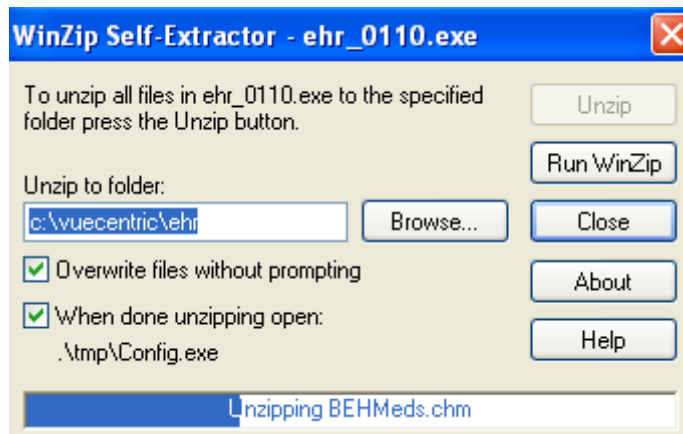

Click OK to proceed. The following dialog appears:

Enter the full path to the shared folder where the client files are to reside. If this is an update to an existing installation, this will be the folder than contains the 'bin' and 'lib' folders from the previous installation.

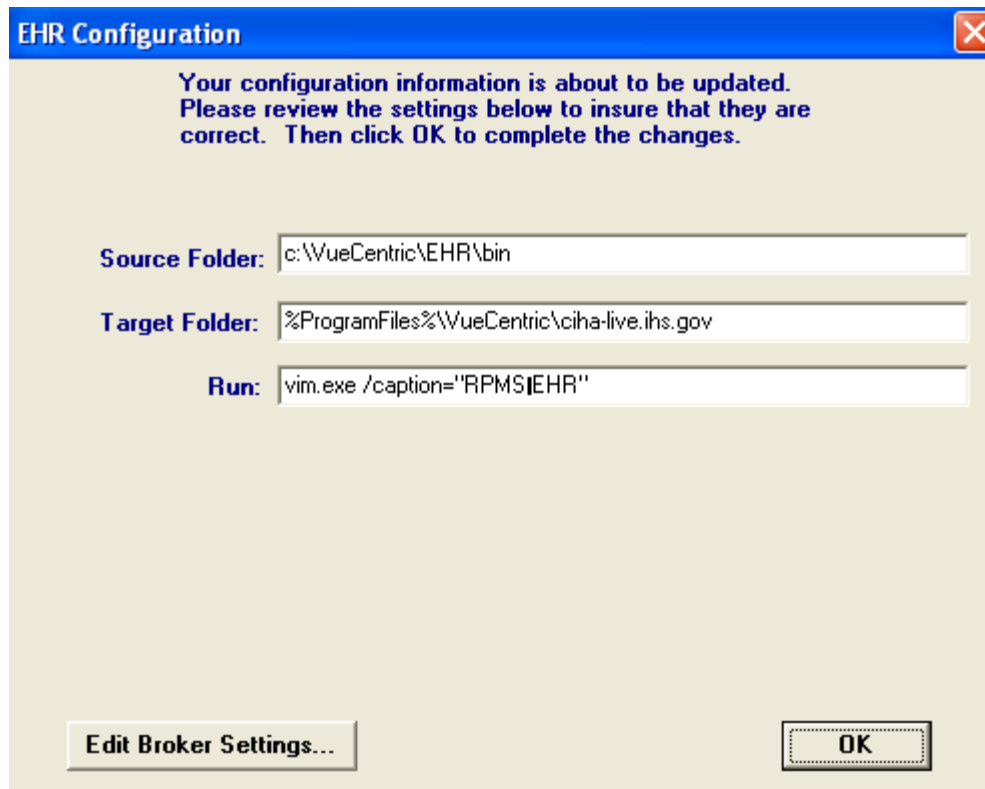

Click the 'Unzip' button to begin the installation process. Installation progress is displayed at the bottom of the dialog:

When the extraction process completes, you will see a confirmation dialog:

Click 'OK' to dismiss the dialog. The EHR configuration dialog will then appear.

If you are updating an existing installation, your current values will be displayed. Unless you have changed folder locations, you should not have to change these settings. If this is a new installation, enter the appropriate values for each of the prompts. For *source folder*, this should be the full UNC path to the location of the 'bin' folder within your shared folder. This path should be resolvable by all users on all client workstations that are to run the EHR application. For *target folder*, this is the path to the application folder on the client workstation where the EHR application will deploy the client components. The recommended path is as shown, substituting the domain name of the target RPMS system in place of the domain name above. The *run* setting can be left as is, or a custom caption can be added if desired.

If this is a new installation, you should also edit your broker settings by clicking the 'Edit Broker Settings' button. This will load the vcBroker.ini file into Notepad for editing. Make any necessary changes and save the file before exiting Notepad.

```
vcBroker.ini - Notepad
File Edit Format View Help
; Installation Notes:
;   Replace <ip address>, <port>, and <uci> with the IP address of your RPMS
;   system, the port number of the primary broker listener process, and the
;   uci of the target system, respectively. Optionally, you may replace the
;   server name (RPMS) with a more descriptive term, and add additional server
;   entries if required.

[Servers]
RPMS=10.1.1.128|9202:EHR

[Settings]
Graphic=vcBroker.jpg
GraphicSettings=1
Caption=RPMS-EHR Logon
DefaultServer=RPMS
```

Close the EHR Configuration dialog by clicking the OK button. You will see a splash screen that indicates that file versions are being updated. When the splash screen closes, the client installation is complete.

Note: Any customized msi files you may have in your “utl” folder (i.e., EHR_Shortcut2.msi and vcUpdaterService2.msi) will be preserved. There are no changes to the msi files delivered with this installation from previous installations. Therefore, if you have already deployed the msi files to your client workstations, you will not need to redeploy them after this installation.

6.0 Appendix II – Server Installation

Install the EHR v1.1 KIDS build using the KIDS menu. The following represents a typical installation. The exact output will depend on whether this is a first time installation or an update to an existing installation. If KIDS indicates that a component has already been installed, enter YES when prompted to continue with the loading process.

```
Kernel Installation & Distribution System

1      Load a Distribution
2      Verify Checksums in Transport Global
3      Print Transport Global
4      Compare Transport Global to Current System
5      Backup a Transport Global
6      Install Package(s)
       Restart Install of Package(s)
       Unload a Distribution

Select Installation Option: 1 Load a Distribution
Enter a Host File: P:\V1.1\ehr_0110.k

KIDS Distribution saved on Feb 09, 2007@10:23:35
Comment: RPMS-EHR Version 1.1

This Distribution contains Transport Globals for the following Package(s):
EHR 1.1

The following NTEG routines may be used to verify checksums for their respective builds:

```
CIAUNTEG for build CIA UTILITIES 1.2*
CIAVNTEG for build VUECENTRIC FRAMEWORK 1.1V2
BEHON007 for build BEHO*1.1*007001
BEHON026 for build BEHO*1.1*026001
BEHON027 for build BEHO*1.1*027001
BEHON028 for build BEHO*1.1*028001
BEHON029 for build BEHO*1.1*029001
BEHON040 for build BEHO*1.1*040001
BEHON005 for build BEHO*1.1*005001
BEHON031 for build BEHO*1.1*031002
BEHON032 for build BEHO*1.1*032001
BEHON009 for build BEHO*1.1*009002
BEHON033 for build BEHO*1.1*033001
BEHON002 for build BEHO*1.1*002002
BEHON004 for build BEHO*1.1*004002
BEHON034 for build BEHO*1.1*034001
BEHON039 for build BEHO*1.1*039001
BEHON020 for build BEHO*1.1*020001
BEHON023 for build BEHO*1.1*023001
BEHON006 for build BEHO*1.1*006001
BEHON037 for build BEHO*1.1*037001
BEHON001 for build BEHO*1.1*001002
BEHON041 for build BEHO*1.1*041001
BEHON044 for build BEHO*1.1*044001
BEHUNTEG for build BEH UTILITIES 1.2
BGONTEG3 for build BGO*1.1*3
ORNT1002 for build OR*3.0*1002
```

*Note: the CIAUOS routine is modified during the course of the installation. Its checksum will vary according to the hardware of the hosting machine. The CIAUNTEG routine will flag this routine as modified. This is normal and not cause for concern.
