FY 2013 URBAN PROGRAM RESULTS SUMMARY AND ANALYSIS

Introduction

In FY 2013, 33 urban programs reported GPRA data, compared to 35 in FY 2012. At the end of FY 2013, the two "hybrid" urban programs (Oklahoma City and Tulsa) that receive funding from other sources were removed from the urban data set and reported with IHS/Tribal results.

The final results for all 33 urban programs are included in this report, including individual dashboards for each program, and three national aggregate dashboards.

Background and Data Collection

IHS has been collecting GPRA data from urban programs since FY 2006. Like Tribal programs and unlike Federal-Direct programs, urban programs are not required to use the Resource Patient Management System (RPMS) as their patient data management system. However, unlike Tribal programs, urban programs are required to report GPRA data in order to receive funding.

RPMS programs use the Clinical Reporting System (CRS), a software application that runs off of RPMS, to report GPRA data. CRS data is validated and the measure logic is updated at least annually. Therefore, data from different CRS sites can be combined and reported as an aggregate rate. Because many urban programs were not using RPMS when urban GPRA performance reporting commenced in FY 2006, the National GPRA Support Team (NGST), which is responsible for the collection of GPRA data, created special reporting instructions for urban programs. These instructions included Excel templates for performance reporting with placeholders for results for each measure. Programs not running RPMS/CRS were required to do an audit of records for each GPRA measure and submit their GPRA results using the Excel template. Programs were encouraged to do a 100% audit of records, but were given instructions for doing a sample audit with a 95% confidence interval as an option. Most programs not running RPMS opted for a 100% audit, but a significant number opted to do a sample audit. Programs were allowed to perform an electronic audit of their records using their own information system, but manual sample or 100% audits were also accepted. The data that came from either 100% or sample audits at non-RPMS sites was not validated by any external source. However, until FY 2010, any non-RPMS data that represented a 100% audit of records was combined with CRS data for the purposes of urban GPRA reporting.

Due to the difficulties of combining data from disparate and non-validated data sources, several years ago the Urban Program mandated that as of FY 2010, all programs that were not using RPMS and CRS would have to either 1) report GPRA data via CRS by the final quarter of FY 2010, or 2) build a "bridge" between their own electronic record keeping system and CRS that would allow for performance reporting. The decision to move all urban programs to RPMS and CRS reporting was backed up by special funding distributed by the Urban Program to each non-RPMS urban clinic, to support and offset the costs of transition to RPMS. Additionally, the Urban Program sponsored onsite RPMS training for non-RPMS sites and held training "boot camps" in Albuquerque for staff to attend beginning in FY 2009. As of FY 2013, this requirement was still in place, however urban programs that had not yet completed the transition to RPMS and CRS reporting were allowed to submit a non-CRS 100% review.

During FY 2013, 24 of 33 urban programs reported data via RPMS/CRS. Two programs transitioned to CRS reporting in FY 2013. (The overall number of CRS programs did not change due to the removal of the two Oklahoma Area CRS programs.) In previous years the number of programs that reported via CRS out of the total number of urban programs reporting was:

FY 2012: 24 of 35
FY 2011: 21 of 34
FY 2010: 18 of 34
FY 2009: 11 of 35

Nine urban sites reported via Excel spreadsheet from a non-RPMS data source in FY 2013. However, only data from the 24 urban programs using RPMS and reporting via CRS are included in the official urban GPRA results for FY 2013.

FY 2013 Results

In FY 2013, urban program targets were the same as Federal and Tribal program targets. Urban programs reported on 17 measures total. Data from the 24 urban programs that reported via CRS were used to calculate measures met or not met.

One caveat to the FY 2013 results: as mentioned above, the urban program data no longer includes data from two "hybrid" urban programs: Oklahoma City and Tulsa. These programs receive multiple sources of funding and are included in the IHS/Tribal data set. Because these programs were very high performing and quite large, removing them from the urban data set caused average rates to drop quite significantly from FY 2012.

In FY 2013, urban programs met 8 of 17 measure targets. The measures met included 7 measures that had significant logic changes and therefore had "baseline" targets. The one measure met that did not have a baseline target was Childhood Weight Control, a long-term measure that was officially reported in FY 2013. The measures with baselines that were met are: Good Glycemic Control, Controlled Blood Pressure, Childhood Immunizations, Pap Screening, Colorectal Cancer Screening, Tobacco Cessation, and a new measure for urbans in FY 2013: Breastfeeding Rates.

There were nine measures not met, including Diabetes: LDL Assessed, Diabetes: Nephropathy Assessed, Influenza Immunization, Pneumococcal Immunization, Mammography Screening, Alcohol Screening, DV/IPV Screening, Depression Screening, and Prenatal HIV Screening.

Overall, urban programs performed lower on all ten measures with comparable data in FY 2013 than in FY 2012. However, because of the removal of the two large Oklahoma Area programs from the urban data set, it is difficult to draw any meaningful conclusions about decreases in measure results in FY 2013.

Breakout Results

There are three categories of urban programs: Comprehensive Service programs, Limited Service programs, and Outreach and Referral programs. A comprehensive program provides direct medical care to patients for 40 or more hours per week, though the range of services varies among programs. A limited program provides direct medical care to patients for less than 40 hours per week. An outreach and referral program provides mental health, substance abuse, health education and referral services, but no direct medical care.

In FY 2013, there were 21 comprehensive programs that provide full services to patients, and 14 of these programs reported data via CRS. There are 7 limited service programs, 6 of which report data via CRS, and 5 outreach and referral programs, 4 of which report data via CRS. Nine programs (7 full service, 1 limited service, 1 outreach and referral) reported via Excel spreadsheet.

All urban programs are required to report data on 17 GPRA measures, despite the fact that limited and outreach programs often do not provide many of these services directly to patients. Therefore, results from limited and outreach and referral programs often are incomplete, and their results for many measures are well below the average.

Among CRS programs, the 14 comprehensive-service urban programs had the highest average results for all measures except LDL Assessed, Pap Screening, Tobacco Cessation, and Childhood Immunizations. Limited Service programs had the highest average on the LDL Assessed, Tobacco Cessation, and Pap Screening measures, and Outreach and Referral programs had the highest rate for Childhood Immunizations. However, there were very few patients in the Childhood Immunization denominator (two total, all from one site) at Outreach and Referral sites, so a high rate is not statistically significant.

Aside from the Childhood Weight Control measure, which was met by Comprehensive and Limited Service sites (and all CRS sites combined), only the LDL Assessed measure rate for limited service sites exceeded the FY 2013 target. Non-CRS sites reported an average rate that exceeded the targets for the Alcohol Screening and Domestic Violence Screening measures.

Individual Program Results

While reviewing individual urban program results in this report, it is important to keep in mind the limits of the various data collection methods. Non-CRS sites report results on spreadsheets with no other supporting documentation; IHS cannot validate results from non-RPMS electronic systems, and these manual audits have not been independently verified. Finally, while CRS results can be validated, some urban programs have only recently begun using CRS for reporting, and in the transition phase, measure results can be impacted by the timeliness, accuracy, and completeness of data entry into RPMS. Therefore, all results, but particularly those from sites *not* reporting through CRS, should be viewed with some caution. Also note that if a program did not report any data for a specific measure, the result is categorized as "no data."
