INDIAN HEALTH SERVICE (IHS) GPRA/GPRAMA PERFORMANCE RESULTS

# Introduction

---

Beginning with FY 2018, IHS clinical GPRA results are calculated from the Integrated Data Collection System (IDCS), a data mart within the National Data Warehouse (NDW) General Data Mart. Service unit/health program data is exported to the NDW by reporting sites for inclusion in GPRA results.

The measure logic is programmed centrally within the IDCS data mart and mimics the CRS measure logic, which is located [here](#)

Each clinical measure has two graphs:

- IHS national performance result and historical data
- IHS Area graphs comparing the current reporting year to the previous year for each of IHS's twelve Area Offices.
  
- FY 2020 National results include data from IHS, Tribal, and Urban Indian health programs (prior to FY 2018 urban results were posted separately).
- FY 2019 National results include data from IHS, Tribal, and Urban Indian health programs (prior to FY 2018 urban results were posted separately).
