RESOURCE AND PATIENT MANAGEMENT SYSTEM

IHS Standard Terminology
Application Programming Interface

(BSTS)

Installation Guide and Release Notes

Version 2.0
February 2017

Office of Information Technology
Division of Information Technology

Table of Contents

1.0 Release Notes

The BSTS package is a component of the Indian Health Service (IHS) Resource and Patient Management System (RPMS) that provides a general interface and caching mechanism for Massachusetts General Hospital (M) Utility Multi Programming System (MUMPS)-based/FileMan-based systems to interact with an external terminology server, specifically, Apelon's Distributed Terminology System (DTS). The Application Program Interfaces (APIs) are designed to be application independent and stand-alone interfaces.

The intended audiences for this document are IHS site managers and other technical staff. Technical documentation accompanies this installation document in this release. Please refer to the IHS Standard Terminology Technical Manual for additional information.

2.0   Installation Notes

Prefix: BSTS

Current Version: 2.0

> Read entire notes file (if included) prior to attempting any installation.

2.1   Contents of Distribution

Table 2-1: Contents of Distribution

File	Description
bsts0200.k	Version 2.0 KIDS installation file
bsts020i.pdf	Version 2.0 Installation Manual (this document)
bsts020t.pdf	Version 2.0 Technical Manual
bsts020u.pdf	Version 2.0 User Manual

2.2   Required Resources

Table 2-2 shows the prerequisite patch requirements.

Table 2-2: Required Resources

Package	Minimum Version	Brief Patch Description
IHS ICD/CPT LOOKUP & GROUPER (AICD)	Version 4.0	The version 4.0 release of the AICD package. It contains updated API calls to handle the new ICD-10 codeset.

Table 2-3 shows the versions of other packages that should be installed for BSTS to work properly. These packages are not required for installing BSTS version 2.0. However, because they are all basic RPMS packages, they should already be installed on the client system.

Table 2-3 Modules and Versions

Module	Minimum Version
Ensemble 2012	v2012.2
VA FileMan (DI)	v22.0 Patch 1017
IHS/VA Utilities (XB)	v3.0 through Patch 11

Module	Minimum Version
IHS Kernel Toolkit (XT)	V7.3 through Patch 1017
VA Kernel (XU)	v8.0 Patch 1017

2.3   Before You Begin: Installation Issues

1. Make a copy of this distribution for offline storage.

2. Print all notes and readme files.

3. Capture the terminal output during the installation using an auxport printer attached to the terminal at which the software installation is being performed. This will ensure that a printed audit trail is available, should any problems arise.

4. Make sure all users are logged off of the system. The BSTS application is utilized by a number of applications (Integrated Problem List, Lab, Pharmacy, Adverse Reaction Tracking, Referred Care Information System, Behavioral Health, CCDA, iCare, PCC, etc.). In order to avoid issues/corruption in those applications and in the BSTS application itself, it is very important that users be kept off the system while this patch is being installed.

    This patch does not contain content data, so it will not take nearly as long to install as previous BSTS releases. The expected installation time is approximately one minute.

3.0 Installation Instructions

The IHS Standard Terminology API consists of a Kernel Installation and Distribution System (KIDS) build only. All classes are imported and compiled as part of the KIDS installation.

3.1 Disk Space

With Version 2.0 of the IHS Standard Terminology API, the installation will have a negligible effect on disk space usage. This is because it does not include any new data content or application routines and classes overwrite existing routines and classes

3.2 Pre-installation

Unlike previous BSTS release installs, there are no steps required prior to installation of this release.

3.3 RPMS Server Install

Before beginning the RPMS KIDS installation, verify that all users are logged off the system (EHR, iCare, and RPMS) before proceeding.

1. On the RPMS server, load and install the bsts0200.k file using the **KIDS** menu options. From the **KIDS** menu, select the **Installation** menu.

2. From the **Installation** menu, select **Option 1: Load a Distribution**.

3. At the "Enter a Host File" prompt, type **bsts0200.k** and press **Enter**. It may be necessary to precede the file name with the appropriate host path. This is the file used to retrieve from the appropriate software directory.

4. At the "Want to Continue with Load?" prompt, press **Enter** to accept the default (Yes).

5. From the **Installation** menu, select **Option 2: Verify Checksums in Transport Global**. This option provides a mechanism for ensuring the integrity of the routines. It verifies checksums for the components of the Transport global, and reports any errors uncovered.

6. Type **IHS STANDARD TERMINOLOGY 2.0** as the install name and press **Enter**. At this point, one of the following installation options may be added:

   - **Back Up a Transport Global**. This creates a MailMan message that will back up all current routines on the system that would be replaced by this release. (Because this is a new release, no files will be replaced.)

- **Compare Transport Global**. This displays all changes that will result from the installation of this patch and compares them with the values currently loaded on the system (routines, data dictionaries, templates, etc.).

7. From the **Installation** menu, select the **Install Packages** option.

8. At the "Select Install Name" prompt, type **IHS STANDARD TERMINOLOGY 2.0** and press **Enter**.

9. Respond to the following prompts as indicated:

   a. At the "Want KIDS to Rebuild Menu Trees Upon Completion of Install?" prompt, type **NO** and press **Enter**.

   b. At the "Want KIDS to INHIBIT LOGONs during the install?" prompt, press **Enter** to accept the default (YES).

   c. At the "Want to DISABLE Scheduled Options, Menu Options and Protocols?" prompt, type **NO** and press **Enter**.

10. Type the name of the device that will print the install messages and press **Enter**.

11. Exit the **Installation** menu.

Proceed to Section 5.0 for further information and setup instructions.

4.0   Sample RPMS Installations

Since this release of BSTS is a new version, there are a number of scenarios in which it can be installed. It can be installed in systems that have not installed BSTS in the past. It can be installed in Version 1.0 environments, Version 1.0 Patch 1 environments, or in Version 1.0 Patch 2 through Patch 8 environments. Below are sample installations of BSTS Version 2.0 in a number of these scenarios.

> **Note**: User responses appear in bold type. Explanatory text is enclosed in square brackets [*text*].

4.1   Installation over BSTS Version 1.0 Patch 8 (Most Common)

Figure 4-1 shows a sample installation screen capture of a Version 2.0 installation in an environment where no iterations of BSTS have ever been installed.

```
Select Kernel Installation & Distribution System <TEST ACCOUNT> Option:
Installation

    1       Load a Distribution
    2       Verify Checksums in Transport Global
    3       Print Transport Global
    4       Compare Transport Global to Current System
    5       Backup a Transport Global
    6       Install Package(s)
            Restart Install of Package(s)
            Unload a Distribution

          Enter  "VA to jump to VIEW ALERTS option

Select Installation <TEST ACCOUNT> Option: 6  Install Package(s)
Select INSTALL NAME:    IHS STANDARD TERMINOLOGY 2.0     Loaded from
Distribution   12/1/16@19:36:19
     => IHS STANDARD TERMINOLOGY 2.0  ;Created on Dec 01, 2016@19:34:24

This Distribution was loaded on Dec 01, 2016@19:36:19 with header of
   IHS STANDARD TERMINOLOGY 2.0  ;Created on Dec 01, 2016@19:34:24
   It consisted of the following Install(s):
IHS STANDARD TERMINOLOGY 2.0
Checking Install for Package IHS STANDARD TERMINOLOGY 2.0
Will first run the Environment Check Routine, BSTS2PRE

Install Questions for IHS STANDARD TERMINOLOGY 2.0

Incoming Files:

   9002318   BSTS SITE PARAMETERS
Note:  You already have the 'BSTS SITE PARAMETERS' File.

   9002318.1 BSTS CODESET
Note:  You already have the 'BSTS CODESET' File.

   9002318.2 BSTS WEB SERVICE ENDPOINT
Note:  You already have the 'BSTS WEB SERVICE ENDPOINT' File.

   9002318.3 BSTS TERMINOLOGY
Note:  You already have the 'BSTS TERMINOLOGY' File.

   9002318.4 BSTS CONCEPT
Note:  You already have the 'BSTS CONCEPT' File.

   9002318.5 BSTS CACHE CLASS TRANSPORT  (including data)
Note:  You already have the 'BSTS CACHE CLASS TRANSPORT' File.
I will OVERWRITE your data with mine.

   9002318.6 BSTS SNOMED MAPPING CONV  (including data)
Note:  You already have the 'BSTS SNOMED MAPPING CONV' File.
I will OVERWRITE your data with mine.

   9002318.7 BSTS USER PREFERENCES
Note:  You already have the 'BSTS USER PREFERENCES' File.

Want KIDS to Rebuild Menu Trees Upon Completion of Install? NO//

Want KIDS to INHIBIT LOGONs during the install? YES//
Want to DISABLE Scheduled Options, Menu Options, and Protocols? NO//
```

```
Enter the Device you want to print the Install messages.
You can queue the install by enter a 'Q' at the device prompt.
Enter a '^' to abort the install.

Updating 9002318.5 Record

Verifying connection to DTS server is working. This may take several
minutes to complete

 Updating Routine file...

 Updating KIDS files...

 IHS STANDARD TERMINOLOGY 2.0 Installed.
               Dec 01, 2016@19:37:25

 Not a VA primary domain

Install Completed
```

Figure 4-3: Installation of V2.0 with V1.0 Pre-Installed

5.0   Installation Configuration

Version 2.0 does not require any pre- or post-installation setup. For sites that already have a previous version of BSTS installed, it will update the BSTS WEB SERVICE file entry to use the new port assigned to the DTS 4.4 server. For new installations, it will set up the BSTS WEB SERVICE entry, the associated BSTS SITE PARAMETERS entry, as well as the SSL/TLS CONFIGURATION entry in the Ensemble Management portal. The following configuration information has been provided in case a setting inadvertently gets removed or changed and instructions are needed to reconfigure the settings.

5.1   Set up the SSL/TLS CONFIGURATION

Version 2.0 does not require any changes to the existing SSL/TLS configuration. If the configuration gets removed or changed and the BSTS connection is no longer working, the following steps should be used to configure the SSL/TLS configuration.

1. Go to **System Administration**, **Security**, **SSL/TLS Configurations** as shown in (Figure 5-1.)

Figure 5-1: Navigate to the SSL/TLS Configurations screen

2. Click the **Create New Configuration** button as shown in (Figure 5-2.)

Figure 5-2: Create a new SSL/TLS Configuration

3. Set up a new entry for SNOMEDServer (Fill in the Configuration Name and Description) Fields with the information shown in (Figure 5-3.)

Figure 5-3: Enter the New Configuration name

4. Now, click the **Test** button at the bottom of this page.

   Information/graphic redacted due to security concerns.　Please contact SQA for full document.

Figure 5-4: Enter the server host name

5. Another prompt will display asking for the TEST SERVER PORT.

   Information/graphic redacted due to security concerns.　Please contact SQA for full document.

Figure 5-5: Enter the server port

6. A message at the top of the Original SSL Configuration screen should display saying that the connection succeeded. See (Figure 5-6.)

Figure 5-6: Successful creation message

7. Click **Save**.

5.2   Defining the Web Service Endpoint

The Version 2.0 installation will automatically update the port number in the BSTS WEB SERVICE ENDPOINT entry for sites that have installed a previous version of BSTS. For new sites, the Version 2.0 installation will set up a new BSTS WEB SERVICE ENDPOINT entry. If the configuration gets removed or changed and the BSTS connection is no longer working, please follow the steps below to configure the BSTS WEB SERVICE ENDPOINT. Figure 5-7 shows the current definition for the PRODUCTION SERVER (Please note that the timeout and connection settings may differ based on the preferences at each site). Also, note that to access this option and other BSTS options, users will need to assign themselves the BSTSZMENU security key.

```
Information redacted due to security concerns.  Please contact SQA for full
document.
```

Figure 5-7: Setting up the BSTS WEB SERVICE ENDPOINT entry

Some of the properties listed above are site-configurable. They can be modified to account for network issues and site preferences. These properties are explained as follows:

TIMEOUT OVERRIDE – The maximum amount of time in seconds that a DTS web service call will wait for a query to finish before it quits (if null, the default is 60 seconds). If a DTS call exceeds this value, the BSTS application will switch over to local access mode. Note that this property pertains to *all* calls to DTS. Many of these calls happen in the background and are not apparent to the user. Care should be taken to set this property to a value of *less than 60 seconds*. To control DTS maximum DTS search times, please adjust the **MAXIMUM REMOTE SEARCH TIME** property instead of this property.

CONNECTION TIMEOUT OVERRIDE – The maximum amount of time in seconds that a DTS web service call will wait for a connection to be established to the DTS server (if null, the default is 2 seconds). Sites with slower network connections may need to adjust this setting to a higher value. Every effort should be taken however to *keep this value as low as possible* to avoid longer waits during SNOMED concept lookups. If the time to establish a connection with the DTS server exceeds this value, the BSTS application will switch over to local access mode.

CHECK FOR DTS CONNECTION ON – When the DTS server is operating in local access mode, this property will contain a date and time in the future. This is the date and time after which the application will attempt to contact the DTS server again to see if it is online. If the value of this property is null, the connection to the DTS server is operating successfully.

MAXIMUM REMOTE SEARCH TIME - After a search call to DTS is completed and it is determined that, even though the call was successful, it still took longer to complete than the number of seconds listed in this field, it will switch the server to local access mode. This value *should be less than or equal to* the **TIMEOUT OVERRIDE** value.

CHECK FOR CONNECTION AFTER – When the DTS server switches to local access mode, it will remain in local access mode until the number of minutes specified in this property are reached. When that wait period has been reached, the next call made to DTS will attempt to restore connection to the server. If the server is back online or search calls are now returning within the allowable **MAXIMUM REMOTE SEARCH TIME**, the DTS link will be switched back on.

5.3   Editing Site Parameters

The Version 2.0 installation will not change any BSTS SITE PARAMETERS settings for sites which have previously installed BSTS. For new sites, the Version 2.0 installation will automatically set up a BSTS SITE PARAMETER entry with the appropriate information. If the configuration gets removed or changed and the BSTS connection is no longer working, the steps listed in Figure 5-8 should be used to configure the BSTS SITE PARAMETERS entry. Figure 5-8 shows the current definition for a typical site.

> **Note**: The BSTS SITE PARAMETERS NAME will differ at each site.

```
OPTION NAME: BSTSMENU        IHS Standard Terminology Management

   WEB    Add/Edit Terminology Web Service
   ESP    Edit Terminology Site Parameters
   TST    Terminology Web Service Test
   DES    Description Id Population Utility
   REF    Refresh IHS Standard Terminology Local Cache
   STS    Check Terminology Web Service Status

You have PENDING ALERTS

Select IHS Standard Terminology Management <TEST ACCOUNT> Option: ESP  Edit
Terminology Site Parameters
Select BSTS SITE PARAMETERS NAME:    2013 DEMO HOSPITAL
REFRESH SUBSETS EVERY # DAYS:
Select WEB SERVICE: PRODUCTION
  Are you adding 'PRODUCTION' as a new WEB SERVICE (the 1ST for this BSTS
SITE P
ARAMETERS)? No// Y  (Yes)
  PRIORITY: 1
  DAYS TO KEEP ERR RESPONSES:
Select WEB SERVICE: Select WEB SERVICE:
```

Figure 5-8: Setting up the BSTS SITE PARAMETERS entry

Some of the properties listed in (Figure 5-8) are site-configurable. They can be modified to account for network issues and site preferences. These properties are explained as follows:

- **REFRESH SUBSETS EVERY # DAYS** – Previous content releases of codeset and subset updates were included in KIDS releases. Future content releases are published to the Apelon DTS server and will be periodically pulled down from the server to the local site. This setting controls how often to refresh the subsets stored locally at the site with the information stored on the remote DTS server. The minimum value for this parameter is fourteen (14) days and the default setting is sixty (60) days. Updates to content are planned to be available for download every thirty (30) to sixty (60) days. Since this refresh process can be system-intensive and take several hours to run, please optimize this setting by keeping this value as high as possible. If necessary, the subset refresh process can always be kicked off manually, when a subset update is released and the content is needed immediately.

- **DAYS TO KEEP ERR RESPONSES** – BSTS logs any attempted connections to the DTS server which did not complete successfully. This logged information is very helpful in troubleshooting connection issues at the site. Allowable values for this parameter are between seven (7) days and thirty (30) days. The default setting is fourteen (14) days. An automatic nightly purge will run to purge logged data that is older than the value specified in this parameter.

5.3.1   Troubleshooting Site Parameters

For new installations, the BSTS Version 2.0 installation automatically attempts to set up a default entry in the BSTS SITE PARAMETERS file. Occasionally, this step is not able to complete properly because of duplicate (or even similar) entries in the RPMS SITE or INSTITUTION files. If, after performing a Version 2.0 installation at a new site, an entry cannot be located in the file, use FileMan to manually enter the site location into the file. Then perform the setup shown in the previous section to enter the remaining information.

```
>D P^DI

VA FileMan 22.0

Select OPTION: 1  ENTER OR EDIT FILE ENTRIES

INPUT TO WHAT FILE: BSTS SITE PARAMETERS//
EDIT WHICH FIELD: ALL// NAME
THEN EDIT FIELD:

Select BSTS SITE PARAMETERS NAME: 2011 DEMO HOSPITAL        HEADQUARTERS
WEST
   ALBUQUERQUE         01           NM  HOSPITAL  8999        [Enter the site
location]
  Are you adding '2011 DEMO HOSPITAL' as
    a new BSTS SITE PARAMETERS (the 1ST)? No// Y  (Yes)
```

Figure 5-9: Manually setting up BSTS SITE PARAMETER entry

5.4   Testing the Web Service Endpoint

The Terminology Web Service Test option can be run to check to see if the connection to the server is working. Figure 5-10 shows a sample display of the option.

```

5.5   Setting up Users to Access BSTS GUI Lookup Tools

In order for users to utilize the BSTS GUI lookup components in EHR, they need to either be assigned the XUPROGMODE security key, or they must be assigned the BSTSRPC option as a secondary menu option. The following instructions explain how to set up a user with the BSTSRPC secondary menu option.

1. Initiate a RPMS telnet session. Run the 'Edit an Existing User' (XUSEREDIT) RPMS menu option. Enter the user to edit when prompted as shown in (Figure 5-11.)

```
Select OPTION NAME: Edit an existing user  XUSEREDIT       Edit an Existing User
Edit an EXISTING USER
Select NEW PERSION NAME:
```

Figure 5-11: Run the RPMS Edit an Existing User Option

2. In the 'Select SECONDARY MENU OPTIONS' field, enter BSTSRPC as shown in (Figure 5-12.)

```
                                         Edit an Existing User
