

RESOURCE AND PATIENT MANAGEMENT SYSTEM

Laboratory

Installation Guide

Version 5.2
December 1997

Division of Information Resources
Albuquerque, New Mexico

Preface

The Laboratory Installation Guide, version 5.2, has been designed to provide the Indian Health Service (IHS) information systems and laboratory staff with the necessary technical information required to install and implement the Laboratory v 5.2 software package.

This manual was originally written by the Veteran's Administration (VA) for use with the VA Lab package. It has been edited to include the modifications that were made to the VA Lab package for use within IHS.

Table of Contents

1.0	LABORATORY	1
1.1	File List	1
2.0	FIRST TIME INSTALLATION	3
2.1	Requirements	3
2.1.1	Test Account	4
2.1.2	Required Software	4

10.0	APPENDIX B: UPGRADE INSTALLATION FAST INSTRUCTIONS	216

1.0 Laboratory

This manual contains complete instructions for a successful installation of the Laboratory package, version 5.2, at your facility. The installation guide is divided into two parts: (1) First Time Installation, and (2) Upgrade from version 5.1. Depending on the current status of the Lab package at your site, you will utilize only one section of this manual.

The installation guide contains detailed instructions on the installation process, post-installation tasks, and troubleshooting. Instructions for setting Lab package parameters, making site-specific changes, and other post-installation setup tasks are provided in the Laboratory Technical manual and the Planning and Implementation guide.

1.1 File List

The following files encompass the Laboratory package, version 5.2. The table below lists the name, title, and description of each file. These files are required for successful installation and implementation of the Lab package.

File	Title	Description
lr__0510.05n		Notes for installation of patch 5 to version 5.1 of the Lab package
lr__0510.05p		Patch 5 to version 5.1 of Lab. This patch is designed to indicate any potential problems during the database conversion of 5.1 to 5.2 as well as an estimate of time required to convert the database.
lr__052n.pdf	DHCP Release Notes	Documentation of changes between version 5.1 and 5.2 of the Lab package
lr__052i.pdf	IHS Laboratory Installation Guide Part I: First Time Install Part II: Upgrade of 5.1 to 5.2	Instructions and notes for first time installation and for upgrading an installation from version 5.1 to 5.2 of Lab
lr__052s.pdf	DHCP Security Guide	Guidelines for security management and access to Lab
lr__052t.pdf	DHCP Technical Manual	Technical information for the setup and management of Lab
lr__052u.pdf	DHCP User Manual	Guidelines for Lab system users
lr__52o1.pdf	DHCP Planning and Implementation Guide	Directions to effectively implement, maintain, and manage the Lab package
lr__52o2.pdf	DHCP Anatomical Pathology User Manual	Guidelines for users of the Anatomical Pathology module of the Lab package
lr__52o3.pdf	DHCP Blood Bank User Manual	Guidelines for users of the Blood Bank module of the Lab package

File	Title	Description
lr__52o4.pdf	DHCP Laboratory Universal Interface: Patch LA*5.2*17 Patch LR*5.2*65 and DHCP HL7 Interface Specifications	Documentation associated with Laboratory Universal Interface based upon HL7 protocols.
lr__0520.r		Routines to install version 5.2 of the Lab package.
lr__0520.g		Lab globals for first time installation of Lab package.
la__0520.r		Routines to install autoinstrument files associated with version 5.2 of the Lab package.
blr_052t.pdf	IHS RPMS Laboratory Package/PCC Link Technical Manual	Directions to setup and maintain the link between the Lab package and the PCC.
blr_0520.r		Routines to establish the link between version 5.2 of the Lab package and the PCC.
blr_0520.g		Lab CPT Globals for first time Lab installation.

2.0 First Time Installation

The Laboratory First Time Installation process consists of the following twelve steps. Each of these steps is described in this section of the installation guide.

1. BLRINIT (to populate PCC conversion files)
2. blr_0520.g (to populate Lab CPT files)
3. BLRVLABC (PCC Lab matching for data conversion)
4. BLRFLEN (to remove old lab data files)
5. LR63INIT (to populate test data names)
6. LAINIT (to load Automated Instrument options and data)
7. lr_0520.g (to load Labs globals)
8. LRINIT (Installation Laboratory V 5.2)
9. BLRVLABC (post PCC conversion)
10. BLRVLABP (post accession area/institution conversion)
11. Setup of BLR Master Control file
12. Restart journaling

<p>Note: After the installation process is complete, you must install the IHS PCC AUPN Patch 6 <i>if not already installed</i></p>

This section of the manual contains an overview of each of the required steps for the first-time installation of Lab, V 5.2. After the instructions is a sample installation script for reference.

You will begin the installation process by performing the pre-installation steps outlined on the following page. Then follow the installation and post-installation instructions, in sequential order as presented here.

2.1 Requirements

2.1.1 Test Account

It is very advantageous to have a functional test account (UCI) that mimics your site's production account. If resources allow, a mirror image is best. Perform the installation first in the test account. Resolve any potential problems and conduct staff training before installation into your production account.

2.1.2 Required Software

Package	Lowest Version Required
Kernel	8.0
FileMan	21
Laboratory (if already installed)	5.1 (with IHS patch lr__0510.05p applied)

Note: If Laboratory Version 5.1 has already been installed but never used for patient care or data entry, it may be overwritten by doing a first time installation.

2.1.3 Laboratory Global Requirements

In general, the Laboratory globals (^LR, ^LRO, and ^LAC) represent the globals that tend to expand in size. It is recommended that these globals be placed on a relatively empty disk. The other Lab globals are somewhat static. The size of the dynamic globals can be controlled through the purge or archive functions.

2.1.4 Disk Requirements

The required size in megabytes is determined by the number of patients seen and the ordering practices of the medical center. The complexity of the medical care delivered appears to correlate well with disk requirements.

It is estimated that the base requirement of disk space would be an increase of 10-15% for a small-medium complexity level (non-RISC) facility to a high of 20-30% for complexity Class I, II, over current disk space levels.

Complexity Level	Disk Growth
Class I or Class II	20-30%
Small-Medium (non RISC)	10-15%

A precise prediction cannot be accurately made for any individual facility. Each facility has different data collection/management reporting requirements.

2.1.5 Hardware Requirements

If you plan to use bar codes, label printers capable of printing bar codes in the format required by the clinical instrumentation used by the Laboratory Service are required. This will allow the use of the accession bar code printing provided in the Laboratory Version 5.2 software. Entries in Terminal Type file (#3.2) **must** have proper escape code sequences for Bar Code On/Bar Code Off for bar code printers in use.

Video terminals used to view laboratory results within and outside of the laboratory should support reverse and blink video. Laboratory Version 5.2 software provides visual alerts of critical patient data on video output. Entries in Terminal Type file (#3.2) must have proper escape code sequences for Video On/Video Off and Blink On/Blink Off for video terminals in use.

2.1.6 Installation Files

Laboratory Version 5.2 Installation consists of several UNIX/DOS files supplied by your ISC. Refer to the File List presented on page 1 for details.

2.2 Pre-Installation Instructions

***WARNING:** You must perform a **complete backup** of your system before proceeding!

The files required for Laboratory First Time Installation process are the following:

Tape/Disk/Files	Routines/Globals
blr_0520.r	BLR* IHS Utilities and PCC conversion routines
blr_0520.g	IHS LAB CPT Global (First Time Only) ^BLRCPT(
lr630520.r	LR63INIT ("CH" Subscript Data Names, for first time sites only)
la__0520.r	LA* routines (Lab Automated Instruments, for first time sites only)
lr__0520.r	LRINIT (Laboratory Service)
lr__0520.g	First Time Installation Globals ^LAB(^LRO(^LAHM

2.3 Installation Process (First-Time Installation)

***WARNING:** The First Time Installation process **must** be implemented in the following sequence.

2.3.1 Step 1 – IHS Utilities Installation (BLRINITs)

Step 1 is done via the installation of the BLR namespaced routines. This init installs additional files used by IHS in conjunction with the LR routines. This first step matches entries in PCC to new Lab Test entries when the first time installation is completed. This requires your laboratory personnel assistance. Users can be on the system during this time. Step 1 can be performed a day before the actual installation. A listing of the acceptable tests for matching is found in the appendix of this section of the manual.

Load the blr_0520.r file and run the init.

```
D ^%RR

          MSM - Routine Restore Utility

Enter input device <HFS>:   Host File Server

Header comment is : BLR IHS New Install CPT Global 3/30/97FJE

Selective restore (allows rename) <N>:  NO

Restoring...
Global: ^BLRCPT  ... Restored
Restore Complete
```

2.3.3 Step 3 – Database Conversion

Step 3 includes the BLRVLABC conversion routine set. These routines match entries in PCC that used the old Lab 60 names to the new entries being installed with the first time 5.2 install. No users should be on the system during Steps 3 through 11.

With your laboratory personnel present, perform the PCC lab test matching process by running BLRVLABC.

The appendix of this section of the manual has a list of test names to choose from. If you cannot find a match, use test names like spacer1, then after the conversion add tests to file 60 and repoint. This process is nondestructive and can be run several times if necessary.

```
[ONE,BBB]>D ^BLRVLABC
  AUPNVLAB Repointer Utility
This routine finds entries in the AUPNVLAB global that may need repointing after
the Lab Package is installed.
This routine must be run just prior to the installation.
ALL identified tests must be matched or the Lab post init will fail.

I will first find all PCC V LAB entries with a bad pointer to file 60...

This tag finds all VLAB tests that have NO entry in File 60
Entries are found in a temp global '^BLRVLC("BAD LABTEST POINTER")'

NO Bad pointers found in the V LAB file

I will next find all the tests that need repointing...

I have previously located tests found in V LAB. You must kill the
'BLRVLC' global if you need to start completely over.

I will now have you try to match UNRESOLVED entries, and verify the auto-matched
entries, with the new LAB entries...

TEST: WBC has been matched to WBC
Is this O.K.?? Yes// <RETURN> (Yes)
TEST: HCT has been matched to HEMATOCRIT
Is this O.K.?? Yes// <RETURN> (Yes)

[PROCESS CONTINUES. REFER TO SAMPLE INSTALL SCRIPT FOR DETAILS]
```

2.3.4 Step 4 – Removing All Old Laboratory Files

Step 4 includes the BLRFCLN routine. This routine removes **all** Lab data and Data Dictionaries. BLRFCLN should be run immediately after the completion of Step 3. No users should be on the system during Steps 3 through 11. Step 4 of the installation process involves 3 parts, which are detailed here.

2.3.4.1 Part A

Remove **ALL** users from the system. When you remove the users from the system - **DO NOT** use the Disable Kernel Log-on option. This also stops TaskMan, which must remain running and functional.

2.3.4.2 Part B

Perform backup and journaling as follows.

RISC Sites

1. Perform a full system backup of your RPMS system.
2. Stop journaling for Lab globals.

SCO/DOS 486 Sites

1. Perform a full system backup of your RPMS system.
2. Ensure that all journal spaces have been re-initialized and contain no data.
3. Sign on to the server where TaskMan is running.

To stop journaling for the Lab globals, follow the example presented here:

```
ONE, BBB]>D ^%GCH

      MSM - Global Characteristics Utility

Global selector: ^L*

      10 globals selected.

Global selector: ^

Select OPTION

      1 Collating Sequence
      2 Global Growth
      3 Protection
      4 Journaling
      5 Allow/Prevent KILL

Enter option 4

Select Journaling Option

      1 Always journal
      2 Journal only when UCI is journaled
      3 Never journal

Select Option: 3 Never journal

Select OPTION

      1 Collating Sequence
      2 Global Growth
      3 Protection
      4 Journaling
      5 Allow/Prevent KILL

Enter option:

Changing characteristics for 10 globals.
10 globals processed.
[ONE, BBB]>
```

2.3.4.3 Part C

Use a terminal that can provide a **hard copy** of the process. You should now access your system and proceed to the programmer prompt level.

```
[ONE,BBB]>D ^XUP

Setting up programmer environment
Access Code: Enter Access Code
Terminal Type set to: C-VT320
Select OPTION NAME: <RETURN>

[ONE,BBB]>SET DTIME=9999
```

This will set your local partition variables. Failure to have proper local variables will cause the environmental check to abort to remove all old Lab-associated data and files.

```
[ONE,BBB]>D START^BLRFLEN
```

2.3.5 Step 5 – Installation of the Laboratory Data Dictionary (LR63INITs)

Step 5 includes the LR63INITs. The LR63INITs should be run immediately after the completion of Step 5. No users should be on the system during Steps 3 through 11.

Load the lr__0520.r files required for the Laboratory First Time Installation process.

```

[ONE,BBB]>D ^%RR

      MSM - Routine Restore Utility

Enter input device <HFS>:   Host File Server
File Name >:  /m/lab52/lr_0520.r

Selective restore (allows rename) <N>:  NO

Restoring...
```

2.3.8 Step 8 – Installation of Laboratory 5.2 Routines and Menus (LRINITs)

Step 8 includes the LRINITs. The LRINITs should be run immediately after the completion of Step 7. No users should be on the system during Steps 3 through 11.

```

[ONE,BBB]>D ^LRINIT
.

[ONE,BBB]>D ^XUP

Select OPTION NAME:
[ONE,BBB]>D POST^LRSETUP

This procedure will purge/kill all entries in the ^LR( global
and the ^LRO( global. This should not be ran by any site already
running the Laboratory Package. It should only be used by First
Time Installation Sites. If your are not a First Time installation
DO NOT RUN this routine. If you have questions, contact your
Information Systems Center (ISC) before continuing

        Do you Wish to continue ? No// Y (Yes)

        ARE YOU CERTAIN - LAST CHANCE ? No// Y (Yes)

In order to continue, you must answer the next prompt by
entering 'YES' -- A simple 'Y' will not work

IF YOU ARE READY   ANSWER 'YES'   YES

        This will take a while

        Your files have been purged to day 1 status

```

2.3.9 Step 9 – PCC Data Repointing

Step 9 repoints the matched lab test entries (Step2). The UPDATE^BLRVLABC should be run immediately after the completion of Step 8. No users should be on the system during Steps 3 through 11.

```

[ONE,BBB]>D UPDATE^BLRVLABC

CONVERTING OLD AUPNVLAB POINTERS TO NEW POINTERS
  This will take some time....

Repointing is finished

```

2.3.10 Step 10 – Lab Test Institution Repointing

Step 10 repoints the entries in File 60 to the correct institution. The BLRVLABPs should be run immediately after the completion of Step 9. No users should be on the system during Steps 3 through 11.

```
[ONE,BBB]>D ^BLRVLABP

Do you want to use SELLS HOSPITAL/CLINIC as your Lab Facility?? Yes// <RETURN>
(Yes)

Is everything OK? No// Y (Yes)
```

2.3.11 Step 11 – BLR Master Control File Setup

Step 11 sets up the BLR Master Control file. The setup should be run immediately after the completion of Step 10. No users should be on the system during Steps 3 through 11.

Set up the BLR Master Control file to pass data into the transaction log and PCC.

Note: You must have installed patch 6 of AUPN9320 for data to pass correctly into PCC. You must answer NO to the LAB LOG TO PCC: field below if the patch is not installed.

```
[ONE,BBB]>D P^DI

Select OPTION: ENTER OR EDIT FILE ENTRIES

INPUT TO WHAT FILE: ACCESSION// BLR MASTER CONTROL
                    (1 entry)

      This is upgrade 6 to AUPN v 93.2.

      Upgrade 6 distributes the V LAB, V MICROBIOLOGY, V BLOOD BANK
      files and templates to support the lab package.
      It also distributes several fields in the V MEDICATION file to
      support outside drug entry.

This version (#93.2) of 'AUP6INIT' was created on 24-JUN-1997
      (at TUCSON DEVELOPMENT 486 SCO-BOX, by VA FileMan V.21.0)

I AM GOING TO SET UP THE FOLLOWING FILES:
      9000010.09V LAB
Note: You already have the 'V LAB' File.

      9000010.14V MEDICATION (Partial Definition)
Note: You already have the 'V MEDICATION' File.

      9000010.25V MICROBIOLOGY
Note: You already have the 'V MICROBIOLOGY' File.

      9000010.31V BLOOD BANK
Note: You already have the 'V BLOOD BANK' File.

SHALL I WRITE OVER FILE SECURITY CODES? No// Y (Yes)
NOTE: This package also contains INPUT TEMPLATES
      SHALL I WRITE OVER EXISTING INPUT TEMPLATES OF THE SAME NAME? Yes// Y
(Yes)

ARE YOU SURE EVERYTHING'S OK? No// Y (Yes)

...SORRY, LET ME PUT YOU ON 'HOLD' FOR A SECOND.....
_OK, I'M DONE.
NOTE THAT FILE SECURITY-CODE PROTECTION HAS BEEN MADE
Deleting package entry AUP6

```

2.4 Post-Installation Instructions:

2.5 Laboratory Information Manager (LIM)

Remember, this is a first time installation so you **must** set up the Laboratory Site Parameters and the Day One files before you use the Laboratory package.

You should work with your Site Manager to schedule the tasks necessary for the daily operation of the Lab package. The appendix has a list of tasks associated with the Lab package. You should task the following two tasks to run 1 minute after midnight and re-task the process daily.

- | | | | |
|----|----------------------------|----------|---|
| 1. | LRTASK NIGHTY | LRNIGHT | Routine run nightly by TaskMan to do some lab cleanup. |
| 2. | LRTASK ROLLOVER
forward | LROLOVER | Routine run each night by TaskMan to roll
the unverified accessions. |

3.0 LRTASK Options

OPTION	ROUTINE	DESCRIPTION
LRTASK ACS	LRACS	Supervisor's daily summary report based on File #64.5. The format is within location, by patient. If a summary is desired by accession number, use the LR SUP SUMMARY. LR SUP SUMMARY is more comprehensive and bulkier. This option should be chosen only if the job failed to run.
LRTASK CONJAM	LRCONJAM	Run by TaskMan each night to set up the controls for the load/worklist list.
LRTASK CUM	CL2^LRAC	Function automatically run by TaskMan. This function should only be selected if the job failed to start. Any other reprints or reruns of any part of the cumulative should be initiated via one of the reprint options in the cumulative menu. Various versions of this option can be created if multiple devices are used to print the cumulative.
LRTASK DAILY INTERIM 1	AIDQ^LRRP2	MenuMan queue option for the first daily interim cumulative report.
LRTASK DAILY INTERIM 2	AIDQ^LRRP2	Same as LRTASK DAILY INTERIM 1.
LRTASK DISCHARGE	DQ~LRACSUM	For automatic queuing of a Laboratory discharge summary for patients discharge "T- 1" from the date this option is invoked. The report is in a similar format as the full patient summary and the cumulative report. The only results that are printed are those that are ordered from the date of admission to the date of discharge.
LRTASK LAB	DQ~IAB	Option to be used by the TaskMan to start up the background 'LAB' routine each time the system is started from a boot.
LRTASK NIGHTY	LRNIGHT	Routine run nightly by TaskMan to do some lab cleanup.
LRTASK PHSET	LRPHSET	Routine run each day by TaskMan to create the first collection list.
LRTASK PHSET1	LRPHSET	Routine run each day by TaskMan to create subsequent collection lists.
LRTASK ROLLOVER	LROLOVER	Routine run each night by TaskMan to roll forward the unverified accessions.

4.0 IHS Lab V Conversion List

Use this list to help decide which PCC Lab tests should be converted. This alphabetical list contains the tests available when installing the Lab package as a first time installation. If you cannot find a match that adequately describes the test in PCC, you should choose an entry like spacer1, then after the installation is complete, edit the PCC Lab entries to reflect new tests that you have added to the Laboratory package.

Terminal Type set to: C-VT100

Select OPTION NAME:
[DKR,DEV]>D ^BLRINIT

This version (#5.2) of 'BLRINIT' was created on 20-NOV-1997
      (at TUCAPD, by VA FileMan V.21.0)

I AM GOING TO SET UP THE FOLLOWING FILES:

      68.999999901LAB VA-IHS LINK
Note:  You already have the 'LAB VA-IHS LINK' File.

      9009021  IHS LAB CPT CODE
Note:  You already have the 'IHS LAB CPT CODE' File.

      9009021.1 IHS LAB CPT REVIEW CODE
Note:  You already have the 'IHS LAB CPT REVIEW CODE' File.

      9009021.2 IHS LAB CPT ACTION CODE
Note:  You already have the 'IHS LAB CPT ACTION CODE' File.

      9009022  IHS LAB TRANSACTION LOG
Note:  You already have the 'IHS LAB TRANSACTION LOG' File.

      9009023  BLR LOCK
Note:  You already have the 'BLR LOCK' File.

```

```

9009028.1 IHS LAB V CONVERSION (including data)
Note: You already have the 'IHS LAB V CONVERSION' File.
_I will MERGE your data with mine.

9009029 BLR MASTER CONTROL
Note: You already have the 'BLR MASTER CONTROL' File.

AUPNVLAB Repointer Utility
This routine finds entries in the AUPNVLAB global that may need repointing
after the Lab Package is installed.
This routine must be run just prior to the installation.
ALL identified tests must be matched or the Lab post init will fail.

```

```
(This process is non destructive and can be run several times if necessary.)

I will first find all PCC V LAB entries with a bad pointer to file 60...

This tag finds all VLAB tests that have NO entry in File 60
Entries are found in a temp global '^BLRVLC("BAD LABTEST POINTER")'

NO Bad pointers found in the V LAB file

I will next find all the tests that need repointing...

I have previously located tests found in V LAB.  You must kill the
'BLRVLC' global if you need to start completely over.

I will now have you try to match UNRESOLVED entries, and verify the auto-matched
entries, with the new LAB entries...

TEST:  WBC has been matched to WBC
Is this O.K.?? Yes// (Yes)
TEST:  RBC has been matched to RBC
Is this O.K.?? Yes// (Yes)
TEST:  HGB has been matched to HEMOGLOBIN

```

7.0 Upgrade from Lab Version 5.1

This section of the Installation Guide provides complete instructions for sites that are upgrading the Laboratory package software from Version 5.1 to Version 5.2.

The Laboratory Version 5.2 Installation process consists of ten steps:

1. Pre-Database Conversion (patch lr__0510.05p).
2. Save Old LR and LA routines and Lab and DD globals.
3. Delete the old routines and restore the new routines.
4. Database Conversion (LR52CNV).
5. IHS Lab Utilities V 5.2 (BLRINIT).
6. Installation Laboratory V 5.2 (LAINIT).
7. Installation Laboratory V 5.2 (LRINIT).
8. Post conversion setup.
9. Post conversion testing.
10. Releasing system to users.

Note: Pre-Database Conversion (is accomplished via patch lr__0510.05p).

Note: If you have already upgraded to version 5.2, **do not** rerun the INITs. Contact area or national support for assistance.

This section of the manual includes four parts that describe all steps necessary to accomplish the upgrade of the Laboratory package:

- Installation Requirements
- Pre-Installation Instructions
- Installation Process
- Post-Installation Instructions

Be sure that you read and become familiar with this entire section prior to beginning the actual installation.

7.1 Installation Requirements

7.1.1 Files to be Overwritten

Sites that have made local modifications to verified released routines or data dictionaries may have them overwritten by this release. Six files are substantially modified in the version 5.2 release. They are Laboratory Test file (#60), Lab Data file (#63), AMIS/CAP file (#64) **renamed** WKLD Code file (#64), Workload file (#67.9) **renamed** Lab Monthly Workloads file (#67.9), Accession file (#68), and the Journal file (#95) **renamed** Lab Journal file (#95). There is potential for adverse effects even if your site used locally allocated numbering schemes. If your site has made local modifications to data dictionaries, careful review in a test account is strongly advised. Data Dictionaries and data from AMIS/CAP file (#64) and Workload file (#67.9) are completely deleted and renamed during the installation process. Locally modified data names in Lab Data file (#63) will not be overwritten. Please refer to the Laboratory Release Notes V 5.2 for further information on Data Dictionary changes.

File Name	Number	DDAction	Data Action
Laboratory Test	60	modified	workload data deleted
Lab Data	63	modified	modified
AMIS/CAP	64	deleted	deleted renamed
WKLD Code			
Workload	67.9	deleted	deleted renamed
Lab Monthly			
Workloads			
Accession	68	modified	modified
Journal	95	none	none renamed
Lab Journal			

Note: The modifications are not limited to the six files listed above.

7.1.2 Test Account

It is very advantageous to have a functional test account (UCI) that mimics your site's production account. If resources allow, a mirror image is best. Perform the installation first in the test account. Resolve any potential problems and conduct staff training before installation into your production account.

7.1.3 Required Software

Package	Lowest Version Required
Kernel	8.0
FileMan	21
Laboratory (if already installed)	5.1 (with IHS patch Ir__0510.05p applied)

7.1.4 Laboratory Global Requirements

In general, the Laboratory globals (^LR, ^LRO, and ^LAC) represent the globals that tend to expand in size. It is recommended that these globals be placed on a relatively empty disk. The other Lab globals are somewhat static. The size of the dynamic globals can be controlled through the purge or archive functions.

7.1.5 Disk Requirements

The required size in megabytes is determined by the number of patients seen and the ordering practices of the medical center. The complexity of the medical care delivered appears to correlate well with disk requirements.

It is estimated that the base requirement of disk space would be an increase of 10-15% for a small-medium complexity level (non-RISC) facility to a high of 20-30% for complexity Class I, II, over current disk space levels.

Complexity Level	Disk Growth
Class I or Class II	20-30%
Small-Medium (non RISC)	10-15%

A precise prediction cannot be accurately made for any individual facility. Each facility has different data collection/management reporting requirements.

7.1.6 Hardware Requirements

If you plan to use bar codes, label printers capable of printing bar codes in the format required by the clinical instrumentation used by the Laboratory Service are required. This will allow the use of the accession bar code printing provided in the Laboratory Version 5.2 software. Entries in Terminal Type file (#3.2) **must** have proper escape code sequences for Bar Code On/Bar Code Off for bar code printers in use.

Video terminals used to view laboratory results within and outside of the laboratory should support reverse and blink video. Laboratory Version 5.2 software provides visual alerts of critical patient data on video output. Entries in Terminal Type file (#3.2) must have proper escape code sequences for Video On/Video Off and Blink On/Blink Off for video terminals in use.

7.1.7 Installation Files

Laboratory Version 5.2 Installation consists of several UNIX/DOS files supplied by your ISC. The files include lr__0510.05p, lr__0520.r, la__0520.r, and blr_0520.r.

Note: IHS patch lr__0510.05p should be installed several days prior to the actual conversion and the reports thoroughly reviewed.

7.2 Pre-Installation Instructions

***WARNING:** You must perform a **complete backup** of your system before proceeding!

Restoration of the RPMS database to a condition that existed prior to the beginning of the installation process may become necessary in the event of an unrecoverable error during the installation.

- **Upgrade Installation to Version 5.1:** To upgrade to Laboratory V 5.1 you **must** obtain assistance from your respective ISC.
- **Upgrade Installation from Version 5.1 to Version 5.2:** Sites that have Laboratory V 5.1 already residing on their system **must** install IHS patch lr__0510.05p to upgrade to Laboratory V 5.2. You will not be allowed to proceed with the INIT process without IHS patch lr__0510.05p (pre-conversion routine) installed.

7.2.1 Requirements and Recommendations

The three files required for Laboratory Upgrade Installation process contain the following:

Tape/Disk/Files	Routines/Globals
blr_0520.r	BLR* IHS Utilities and PCC conversion routines
lr__0520.r	LR52* conversion routines LR* routines
lr__0510.05p	Lab 5.1 Conversion Patch
la__0520.r	LA* routines (Lab Automated Instruments)

Recommended journaling of Laboratory-related globals:

- ^LRO (Mandatory)
- ^LR (Mandatory)
- ^LAM (Mandatory)
- ^LRD (Mandatory)
- ^LAB (Optional)
- ^LRE (Optional)
- ^LRT (Optional)

7.2.2 Process Steps

1. It is required that **all** users be off the system during **Steps 3 through 10** of the upgrade installation process. The database conversion and installation process will progress more rapidly if users are cautioned not to schedule TaskMan jobs during the process. (TaskMan must still be running during the Installation process.) IRM personnel should check the list of scheduled jobs and if conflicts exist, reschedule them for another time after the installation process has been completed.
2. Step 1 and Step 6 of the process queue multiple TaskMan jobs. Completion time for each step will depend upon the number of entries in the Lab Data file (#63) and the number of jobs that TaskMan must handle. Experience has shown that the Laboratory installation process runs faster when TaskMan jobs not related to Lab are at a minimum.
3. Ensure that all Kernel, FileMan, and New Person patches have been installed.
4. Providers **must** be entered into the New Person file (#200). The Provider Class field (#53.5) must have entries of the providers in the New Person file (#200) and the Provider security key assigned.
5. All data in the AMIS/CAP file (#64) and Workload file (#67.9) will be deleted and renamed during Version 5.2 installation process. All data in the LR Routine Integrity Checker file (#69.91) will be purged during this installation process. A final hard copy printout of workload related reports should be obtained by the Laboratory Service before the LRINITs are run. A listing of CAP Codes in use in Laboratory Test file (#60) will be provided before data is actually purged. No listing will be provided for data stored in Workload file (#67.9).
6. Identify all locally modified routines and save under the LRZ namespace. Ensure that functioning Automated Instrument routines are saved under the LAZ namespace.
7. Ensure that any site-specific accession label routines are preserved. This can be done by saving the routine as LRLABEL4. The routine LRLABEL4 is not exported.
8. All local Laboratory templates and routines **must** point to the New Person file (#200) instead of the Provider file (#6), Person file (#16), and User file (#3) after Laboratory V 5.2 software is installed.
9. A day or two before beginning the installation process, use the Purge Old Orders and Accessions [LROC] option to remove old data from the Accession file (#68) and Lab Order Entry file (#69). This will reduce the database search and conversion time. Set the number of days that data is to be saved to the lowest tolerable value.
10. Make a copy of all LRTASK jobs that your site has queued.

11. Run the Check Files for Inconsistencies [LRCHKFILES] option. This option will generate a report of potential inconsistencies of data in various files. Resolution of as many inconsistencies as possible will reduce the database search and conversion time.
12. Review the Laboratory V 5.2 Technical Manual. The Laboratory Technical Manual provides information on External Routines, External/Internal Relations, Global Journaling, Translation, Replication, and Mapping Routines. Also included in the Laboratory Technical Manual is a listing of all External Routines and External/Internal Relations.

7.3 Installation Process (Upgrade)

ADDITIONAL PRE-INSTALLATION NOTES

- Laboratory **First Time Installation** sites, please refer to the First Time Installation section of this guide.
- Sites that will need to upgrade to Laboratory Version 5.1 **must** obtain assistance from the local ISC.
- The Installation process includes the LR52CNV* conversion routine set. The LR52CNV* conversion routine set uses the same criteria as the LR5XCNV* routine set to identify all of the areas in the Laboratory database files that point to the User file (#3), Provider file (#6), and the Person file (#16). The LR52CNV* routine set actually converts the data and writes the converted data to the database. If the conversion routine set finds a record that cannot be converted properly, it will reset the original pointer value in the database preceded by ERR (e.g., ERR12345), note the record on the Exception Report, and continue processing. Since the LR52CNV* conversion routine set is run only once, there is no opportunity to observe the data for the record noted on the Exception Report or to make modifications to the record data as necessary.
- There is an Exception Report for each tasked job. The Exception Report provides a hard copy of the entries that could not be converted and ensures that each tasked job actually completed. After the installation is completed, you may choose to go back to the Exception Report and correct any data that could not be converted.

7.3.1 Step 1 – Pre-Database Conversion (IHS Patch Ir__0510.05p)

Step 1 is done via the IHS patch Ir__0510.05p. This patch is designed to indicate any potential problems during the actual database conversion. It will also provide an estimate of time required to convert the database. This will assist the site in estimating the downtime required for V 5.2 conversion and installation.

7.3.1.1 Part A: Restore the lr__0510.05p Patch

```
[ONE,BBB]>D ^%RR

      MSM - Routine Restore Utility

Enter input device <HFS>: Host File Server
File Name >: /m/lab52/lr__0510.05p
Routine(s) saved at 11:39 AM 21-JAN-97
Header comment is:
Selective restore? (allows rename) <N>: NO
Restoring... [NOTE: 27 routines restored]
```

7.3.1.2 Part B: Run the Pre-Conversion Patch

```
[ONE,BBB]>D ^LR5XCNV

You have the following choices:
1. Run all tasks at once. (This procedure is same as Patch 122.)
2. Name a device to limit the number of tasks to be started.
   OR
3. Up arrow out and call each file conversion by individual entry point.
The entry points are:
D EN63^LR5XCNV
D EN65^LR5XCNV
D EN68^LR5XCNV
D EN69^LR5XCNV
D ENARCH^LR5XCNV
NOTE: You must ensure that ALL ENTRY POINTS HAVE BEEN RUN!!
The Global ^XTMP("LR5X", will contain a record of those completed.

Select one of the following:
1 All tasks at once
2 Throttle through a Device

Choose one of the following: 1 All tasks at once

I will produce a list of CAP codes from your file LABORATORY TEST (#60)
Printer Name HOME// 64

Report Queued to BBB64

PRINTER for EXCEPTION REPORT: 64
```

7.3.1.3 Part C: Verify Completion of Pre-Conversion

Verify the Exception Report by running LR5XTIME (in IHS Patch lr__0510.05p). Please see the Troubleshooting section at the end of this manual for hints on how to solve problems that the Exception Report may show. After all of the tasked conversions have run to completion, obtain a printout of the conversion times.

LR5XTIME provides an approximation of database conversion time and is to be run after the actual conversion routines have completed. A report will be generated that contains the following information:

- Which of the tasks spawned to convert Lab Data file (#63) took the longest and how long it took to complete.
- What was the overall time for the conversion by finding the difference between the earliest task start time and the latest task end time.
- If any task should fail for any reason and be restarted significantly later than the other tasks, this will naturally skew the overall time.

Example: Approximation database conversion time.

```
[ONE,BBB]>D ^LR5XTIME  
DEVICE: HOME// [Enter your site's printer name]
```

7.3.2 Step 2 – Saving the Old LA and LR Routines and Globals to a Host File

Step 2 saves your old routines and LAB and DD globals in case you have made local undocumented changes. This routine set and globals can be saved prior to the actual installation. Users can remain on the system during the save.

Users may remain on the system during this step. If you elect to remove users from the system at this time, DO NOT use the disable Kernel Log-on option as it also stops TaskMan, which must remain running and functional during the installation process.

7.3.2.1 Part A

Ensure that you have done a backup and journaling as specified in the pre-installation instructions.

1. Perform a full system backup of your RPMS system.
2. Stop journaling.

Note: 486 Sites: many SETs and KILLs are executed during the conversion and INIT process. It is important to ensure that all journal space is available for use. If a problem with cross-system journaling is encountered, please contact your local ISC for assistance.

To stop journaling for the Lab globals:

```
[ONE,BBB]>D ^%GCH

      MSM - Global Characteristics Utility

Global selector: ^L*

      12 globals selected.

Global selector: ^^L

LA     LAB     LAC     LAH     LAM     LAR
LR     LRD     LRE     LRO     LRT     LS

      12 globals selected so far.

Global selector: ^

Select OPTION

      1 Collating Sequence
      2 Global Growth
      3 Protection
      4 Journaling
      5 Allow/Prevent KILL

Enter option: 4 Journaling

Select Journaling Option

      1 Always journal
      2 Journal only when UCI is journaled
      3 Never journal

Select Option: 3 Never journal

Select OPTION

      1 Collating Sequence
      2 Global Growth
      3 Protection
      4 Journaling
      5 Allow/Prevent KILL

Enter option:

Changing characteristics for 12 globals.
 1 globals processed.
 2
 3
 4
 5
 6
 7
 8
 9
10
11
12
```

7.3.2.2 Part B

Stop all Auto Instrument interfaces. This should be done by entering the following line of MUMPS code at the programmers prompt:

```
[ONE,BBB]>S ^LA("STOP",X)=""
```

Where X represents the Auto Instrument file (#62.4) internal entry number.

Example: LSI #1 X=1, LSI #2 X=11

After several minutes have passed, check system status. If the jobs are still active, you **must** terminate the jobs.

7.3.2.3 Part C

Check system status for active jobs. Stop all unnecessary jobs running on the system and reschedule all tasked jobs after the installation process (at least 12 hours after the beginning of LRINITs).

7.3.2.4 Part D

Ensure that the printer you intend to use for reports has a new box of paper mounted. One or more reports will be printed out during the conversion process. These reports can be very lengthy.

7.3.2.5 Part E

You should now access your system and proceed to the programmer's prompt level. Use a terminal that can provide a hard copy of the process.

At the terminal:

```
[ONE,BBB]>D ^XUP
```

This will set your local partition variables. Failure to have proper local variables will cause the conversion process to abort. Ensure that DTIME is set to a high value (9999) to prevent timing out during the INIT process.

7.3.2.6 Part F

Check system status to ensure that TaskMan is running.

7.3.2.7 Part G

Check for sufficient space in the database.

7.3.2.8 Part H

Save the LR and LA routines. To save your old LR and LA routines and globals to a UNIX file, do the following: Save the LAB and DD63.04 globals.

```

[ONE,BBB]>D ^%RS

Restoring... [NOTE: 2273 routines restored]
```

7.3.4 Step 4 – Database Conversion

Step 4 includes the LR52CNV* conversion routine set. This routine set **must** be run immediately after Step 3. No users should remain on the system during Steps 3 through 10.

7.3.4.1 Step A

Run the LR52CNV routine.

```
[ONE,BBB]>D ^XUP

Setting up programmer environment
Terminal Type set to: C-VT100
You have 15 new messages.
Select OPTION NAME:

[ONE,BBB]>D ^LR52CNV

I see you already have a list of CAP codes from LABORATORY TEST file.

Would you like another? No// <RETURN> (No)
PRINTER for EXCEPTION REPORT: SXC124 NURSING PRINTER (TTY65)
```

Note: The number of tasks started is dependent on the number of years and accession areas you have defined.

7.3.4.2 Part B

Verify the Exception Report as you did for LR5XCNV (in IHS patch LR5.1*5). Please see the Troubleshooting section at the end of this manual for hints on how to solve problems that the Exception Report may show.

7.3.4.3 Part C

After all of the tasked conversions have run to completion, obtain a printout of the conversion times.

LR52TIME provides an approximation of database conversion time and is to be run after the actual conversion routines have completed. A report will be generated.

To check to see if tasks are still running:

```
[ONE,BBB]>SS
```

To check the progress of the conversion:

```
[ONE,BBB]>D ^LR52TIME
DEVICE: HOME// <RETURN>
```

7.3.5 Step 5 – Installation (IHS Utilities Package Upgrade Laboratory V 5.2)

Step 5 includes the BLRINITs. The BLRINITs start the upgrade process. No users should be on the system during Steps 3 through 10.

To run the BLR INITS:

```
[ONE,BBB]>D ^BLRINIT

This version (#5.2) of 'BLRINIT' was created on 13-AUG-1997
      (at TUCAPD, by VA FileMan V.21.0)

I AM GOING TO SET UP THE FOLLOWING FILES:

      68.999999901LAB VA-IHS LINK
Note:  You already have the 'LAB VA-IHS LINK' File.
.
.
.
SHALL I WRITE OVER FILE SECURITY CODES? No// Y (Yes)

      SHALL I WRITE OVER EXISTING OPTIONS OF THE SAME NAME? Yes// Y(Yes)

ARE YOU SURE EVERYTHING'S OK? No// Y (Yes)

...EXCUSE ME, I'M WORKING AS FAST AS I CAN.....
'BLRTXERR' BULLETIN FILED -- Remember to add mail groups for new bulletins.
```

7.3.6 Step 6 – Installation (Package Upgrade Laboratory V 5.2 Auto-Instrument File)

Step 6 includes the LAINITS. The LAINITs should be run immediately after the completion of Step 5. No users should remain on the system during Steps 3 through 10.

To run the LA INITS:

```
[ONE,BBB]>D ^LAINIT

This version (#5.2) of 'LAINIT' was created on 21-JAN-1997
(at TUCAPD, by VA FileMan V.21.0)

I HAVE TO RUN AN ENVIRONMENT CHECK ROUTINE.

    Pre-Init Environment Check Completed...

I AM GOING TO SET UP THE FOLLOWING FILES:

    62.4    AUTO INSTRUMENT
Note: You already have the 'AUTO INSTRUMENT' File.

SHALL I WRITE OVER FILE SECURITY CODES? No// Y (Yes)
NOTE: This package also contains INPUT TEMPLATES
    SHALL I WRITE OVER EXISTING INPUT TEMPLATES OF THE SAME NAME? Yes//
<RETURN> (Yes)
NOTE: This package also contains OPTIONS
    SHALL I WRITE OVER EXISTING OPTIONS OF THE SAME NAME? Yes// <RETURN>
(Yes)

ARE YOU SURE EVERYTHING'S OK? No// Y (Yes)
```

7.3.7 Step 7 – Installation (package upgrade Laboratory V 5.2 Lab Files)

Step 7 includes the LRINITs. The LRINITs should be run immediately after the completion of Step 6. No users should remain on the system during Steps 3 through 10.

To run the LRINITs:

```
[ONE,BBB]>D ^LRINIT

This version (#5.2) of 'LRINIT' was created on 31-MAR-1997
(at TUCAPD, by VA FileMan V.21.0)

I HAVE TO RUN AN ENVIRONMENT CHECK ROUTINE.

Checking for required globals.

    Global check complete 'OK'

Please ensure that the laboratory service has collected all of
workload (AMIS) data to this date. This information will be lost
after V 5.2 is installed.

Please perform Purge old Orders and Accessions Option. This will
reduce the conversion time of the install.

Make a copy of your tasked/startup Laboratory options. You will have
to re-enter the dates and times after the install.

    OK to continue ? No// Y (Yes)
```

7.3.8 Step 8 – Post Conversion Setup

Step 8 involves editing several Laboratory files that have the 5.2 enhancements. No users should remain on the system during Steps 3 through 10.

7.3.8.1 Part A

Part A involves editing the NUMERIC IDENTIFIER field in the Accession file. The numbers can be any number between 1 and 99. It is recommended that you choose values 80 and above for those accession areas that you do not use. An example might be the 10-19 for chem, 20-29 for heme, 30-39 for micro, etc.

```
[ONE,BBB]>D P^DI

7.3.8.6 Part F

Check/reschedule LR tasks.

7.3.9 Step 9 – Post Conversion Testing

Step 9 involves reviewing and testing the several enhancements to 5.2 and checking to see that the conversion was successful. No users should remain on the system during Steps 3 through 10. You may now start to test the system in preparation of returning users to the system. Exercise ordering, accessioning, verification, and results reporting options used by your site.

7.3.10 Step10 – Releasing System to Users

Step 10 releases the system back to the users.

The 5.2 installation is complete.

- Although this example shows the same time for both LR5XTIME and LR52TIME, your printout may show times that differ.
- When the ^LR52CNV* conversion routine has successfully run to completion, all associated tasked jobs have run, and all the reports have completed, the New Person pointer conversion is complete. All the exception reports must be printed out before the INITs are run.

The pre-INIT routines (LRIPRE*) will allow the user to (optionally) print a list of the CAP codes from the Laboratory Test file (#60). The CAP code entries will be deleted from the Laboratory Test file (#60), and from the AMIS/CAP file (#64). File #64 will be renamed WKLD Code file (#64) and a new definition of the file attributes will be created by the LRINIT process. Most IHS Sites do not use the CAP section.

7.4 Post-Installation Instructions Laboratory Version 5.2 Upgrade

Note: If you have already upgraded to version 5.2, **do not** rerun the INITs. Contact area or national support for assistance.

All Sites

1. Restart your LSI (Auto Instrument interface). Send a few test data streams from each interfaced instrument. Ensure that the data is being processed into the ^LAH global and is verifiable.
2. Reschedule your tasked and backup procedures. Ensure that LRTASK* options have the correct times and output devices to match your hard copy printout.
3. Follow local established policy to remove the LRINI*, LRIP*, LAINI*, LAIP*, LR63I*, and LR5* routines.
4. Load routines into LR Routine Integrity Checker file (#69.91). This step can be done a day or two after the system has become stable.

Example:

```
[ONE,BBB]> D ^XUP

Setting up programmer environment
Select OPTION NAME: LRMENU      Laboratory RPMS Menu
Select Laboratory RPMS Menu Option: SUPERVISOR menu
Select Supervisor menu Option: LAB Liaison menu
Select Lab liaison menu Option: LAB ROUTINE INTEGRITY MENU
Select LAB ROUTINE INTEGRITY MENU Option: LOAD Integrity File
Select Version # 5.2
ARE YOU ADDING '5.2 AS
  A NEW LR ROUTINE INTEGRITY CHECKER (THE 2ND)? Y (YES)
  LR ROUTINE INTEGRITY CHECKER Distribution Date: JUN 20 94 (JUN 20, 1994)
DEVICE: HOME// LAN [Enter your site's printer name]
```

Note: Each routine will be listed as it is being added to the file.

RISC Sites

- Recommended routines for mapping are LRPARAM, LRO*, LRU, LRUA, LRV*, LRX, LRWU*, LRAPD*, LRCAPV*, LRDPA*, LRWL*, LRAFUN*, LRKILL, LRRP*, LRMIE*, LRMIBUG, LRMIU*, LRUP, LRUB, and LRUBL.

Recommended journaling of Laboratory-related globals:

^LRO (Mandatory)
^LR (Mandatory)
^LAM (Mandatory)
^LRD (Mandatory)
^LAB (Optional)
^LRE (Optional)
^LRT (Optional)

Note: Consult the Routine Histogram (^RTHIST) report for a more precise mapping set.

486 Sites Only

1. Move all LR*, LA* (minus INITs), SROSPLG, SROSPLG1, and SROSPLG2 routines to the computer servers and any additional print servers.
2. Two print templates are associated with the Blood Donor file (#65.5) that are compiled at the end of the INITs into LRBLDPT and LRBLDPK routines. Please recompile these templates on the compute (and additional print) servers.
3. Follow your local system backup and journaling procedures.

7.4.1 Laboratory Information Manager (LIM)

A few changes will have an immediate effect and need to be performed after installation of the upgraded Lab package. If the changes are not done, Blood Bank and Anatomic Pathology will not work. Some options will use new fields or new files that need to be complete before the options can work properly.

The Release Notes detail the data dictionary changes and the changes in functionality. Please consult the Release Notes manual for more detailed discussion about the data dictionary changes that make the following actions necessary.

1. For all of the entries in the Blood Product file (#66) that are currently being used, the new ADMINISTRATIVE CATEGORY field will need to be completed. By using the FileMan option to edit the entries, this process can be expedited by simply looping through the entries in the Blood Product file (#66).
2. You need to edit a new entry in the Lab Letter file (#65.9) that will control the content of the text to appear in the output generated by the Shipping Invoices for Blood Components [LRBLISH] option. This was previously hard coded, but it is now determined by the entry in Lab Letter file (#65.9), which is designated as the "SHIPPING INVOICE".

3. You need to edit a new entry in the Lab Letter file (#65.9) that will control the content of the text to appear at the bottom of the Inventory Testing worksheet generated by the Inventory ABO/Rh Testing Worksheet [LRBLIW] option. This was previously hard coded, but it is now determined by the entry in Lab Letter file (#65.9), which is designated as the "INVENTORY WORKSHEET". This will allow the text to match the key used at that specific facility.
4. If you have been using the Maximum Surgical Blood Order Schedule (MSBOS) functionality, you need to use the File 81 Conversion [LRBLPOST] option to convert the entries in the CPT file (#81) to the new Operations (MSBOS) file (#66.5). The field in the CPT file (#81) that stores this information is scheduled for deletion in a future version of MAS. This new file in Laboratory is necessary in order to prevent the data from being overwritten each time the CPT file (#81) is released with data. Please note that the Maximum Surgical Blood Order Edit [LRBLSMS] option in the Blood Bank menu now points to Operations (MSBOS) file (#66.5).
5. The following new WK tests are exported with Laboratory Version 5.2 in Laboratory Test file (#60). You **must** remove the WK- from the test name because the routines are hard coded to look for the specific test names.

8.0 Reprint Exception Report For LR52* Routines

If the printer failed to produce an Exception Report due to a malfunction of the printer (e.g., paper jam/tear, printer failure, etc.), the report may be selectively reprinted through the use of the LR52CNVP routine. Before invoking this routine, you will need to refer to the “task spawn list” to obtain the File number, Task number, Accession Area number, or any other data as appropriate. You will be prompted for appropriate data.

Example:

```
[ONE,BBB]>D ^LR52CNVP
  Select one of the following:
    1      63
    2     63.9999
    3      65
    4      68
    5      69

FILE: 1 63

Enter the TASK # off of the task spawn list: (0-99999999): 18662
Enter the 'from' entry # off of the task spawn list: (0-18000000): 0

DEVICE: HOME// <RETURN> LAN

      Exception report for file 63: LAB DATA.
      Task # 18662
      For entries from 0 to 29999

The value (749) "Non-existent", in field REQUESTING PERSON, could not be reprinted.
This occurred in:
The CHEM, HEM, TOX, RIA, SER, etc.: subfile of "CH"  entry: 7119174.92
The LABORATORY DATA FILE:                entry: 606

The value (749) "Non-existent",
in field REPORT ROUTING (PROVIDER), could not be reprinted.
This occurred in:
The LABORATORY DATA FILE:                entry: 1044

The value (155) "Non-existent",
in field PHYSICIAN, could not be reprinted.
This occurred in:
The MICROBIOLOGY: subfile of                entry: 2921002.112539
The LABORATORY DATA FILE:                entry: 1212
```

8.1.1 Restart Exception Report

If a task listed on the “task spawn list” does not have a corresponding Exception Report generated and a printer problem has been eliminated, the tasked job may have aborted prior to completion. You must restart the Exception Report process by doing the following:

```
[ONE,BBB]>D CRASH^LR52CNV
```

8.1.2 Analysis of Task #18662

The following analysis of Task #18662 may be helpful in determining the reason why the entries on this Exception Report were unable to be converted.

63	File #
749	Internal Entry Number (IEN) of the pointer value stored from File #6/#16 which was invalid in File 200
606	IEN (LRDFN) of entry in File # 63
REQUESTING PERSON	sub-field name under field name of File # 63
CHEM, HEM, TOX, RIA, SER, etc.	field name of File # 63
7119174.92	IEN of multiple entry under LRDFN

```
[ONE,BBB]>D P^DI

Select LAB DATA LRDFN: <RETURN>

```

8.1.2.1 Possible Actions

In both of the cases above, the problem is precipitated by the fact that at one time an IEN of 749 existed in File #6 and File #16. For some reason, the IEN in File #6 still exists, although with minimal data; however, the IEN no longer exists in File #16. The facility may choose one of the following actions:

1. Repair the entries in File #6 and in File #16 if enough data is present. In the above case, enough data does not appear in the file to reconstruct the entry.
2. Use FileMan as shown above to edit the IEN to point to a valid entry in File #16 (and File #200). This could be a catch-all entry such as UNKNOWN, UNKNOWN. Remember, the entry in File #16 must be pointed to by a valid entry in File #200 in order to convert properly.
3. If you choose not to alter the data, in which case the Step II conversion process will transpose the data into an error condition, the value at the global location will become 749ERR. In this way, the use of FileMan to examine the data entry will show the value as it existed prior to conversion.

9.0 Appendix A: Sample Upgrade Script

>D ^LR5XCNV

You have the following choices:
1. Run all tasks at once. (This procedure is same as Patch 122.)
2. Name a device to limit the number of tasks to be started.
   OR
3. Up arrow out and call each file conversion by individual entry point.
The entry points are:
D EN63^LR5XCNV
D EN65^LR5XCNV
D EN68^LR5XCNV
D EN69^LR5XCNV
D ENARCH^LR5XCNV
NOTE: You must ensure that ALL ENTRY POINTS HAVE BEEN RUN!!
The Global ^XTMP("LR5X", will contain a record of those completed.

      Select one of the following:

          1      All tasks at once
          2      Throttle through a Device

Choose one of the following: 1 All tasks at once

I will produce a list of CAP codes from your file LABORATORY TEST (#60)

>D ^XUP

Setting up programmer environment

Terminal Type set to: C-VT100

You have 15 new messages.

Select OPTION NAME:

>D ^LR52CNV

I see you already have a list of CAP codes from LABORATORY TEST file.

Would you like another? No// <RETURN> (No)

PRINTER for EXCEPTION REPORT: SXC124 NURSING PRINTER (TTY65)

Task # 1327576

with the description of 'LAB Conversion File 63 (LAB DATA) global from ENTRY # 0 to ENTRY # 29999.' has been scheduled to run APR 11,1997@08:31:17.

Task # 1327577

with the description of 'LAB Conversion File 65 (BLOOD INVENTORY)' has been scheduled to run APR 11,1997@08:31:17.

Task # 1327578

with the description of 'LAB Conversion File 68 (ACCESSION) area # 1.' has been scheduled to run APR 11,1997@08:31:17._

Task # 1327579

with the description of 'LAB Conversion File 68 (ACCESSION) area # 3.' has been scheduled to run APR 11,1997@08:31:17.

Task # 1327580

with the description of 'LAB Conversion File 68 (ACCESSION) area # 6.' has been scheduled to run APR 11,1997@08:31:17.

Task # 1327581

with the description of 'LAB Conversion File 68 (ACCESSION) area # 7.' has been scheduled to run APR 11,1997@08:31:17.

Task # 1327582

with the description of 'LAB Conversion File 68 (ACCESSION) area # 9.'
has been scheduled to run APR 11,1997@08:31:17.

>D ^LRINIT

This version (#5.2) of 'LRINIT' was created on 31-MAR-1997
(at TUCAPD, by VA FileMan V.21.0)

I HAVE TO RUN AN ENVIRONMENT CHECK ROUTINE.

Checking for required globals.

    Global check complete 'OK'

    Please ensure that the laboratory service has collected all of
    workload (AMIS) data to this date. This information will be lost

```

after V 5.2 is installed.

Please perform Purge old Orders and Accessions Option. This will reduce the conversion time of the install.

Make a copy of your tasked/startup Laboratory options. You will have to re-enter the dates and times after the install.

OK to continue ? No// **Y** (Yes)

I AM GOING TO SET UP THE FOLLOWING FILES:

60 LABORATORY TEST_

Note: You already have the 'LABORATORY TEST' File.

61 TOPOGRAPHY FIELD_

Note: You already have the 'TOPOGRAPHY FIELD' File.

61.1 MORPHOLOGY FIELD_

Note: You already have the 'MORPHOLOGY FIELD' File.

61.2 ETIOLOGY FIELD_

Note: You already have the 'ETIOLOGY FIELD' File.

61.3 FUNCTION FIELD_

Note: You already have the 'FUNCTION FIELD' File.

61.4 DISEASE FIELD_

Note: You already have the 'DISEASE FIELD' File.

61.5 PROCEDURE FIELD_

Note: You already have the 'PROCEDURE FIELD' File.

61.6 OCCUPATION FIELD_

Note: You already have the 'OCCUPATION FIELD' File.

62 COLLECTION SAMPLE_

Note: You already have the 'COLLECTION SAMPLE' File.

62.05 URGENCY_

Note: You already have the 'URGENCY' File.

62.06 ANTIMICROBIAL SUSCEPTIBILITY_

Note: You already have the 'ANTIMICROBIAL SUSCEPTIBILITY' File.

62.07 EXECUTE CODE_

Note: You already have the 'EXECUTE CODE' File.

62.1 DELTA CHECKS_

Note: You already have the 'DELTA CHECKS' File.

62.2 LAB SECTION_

Note: You already have the 'LAB SECTION' File.

62.3 LAB CONTROL NAME_

Note: You already have the 'LAB CONTROL NAME' File.

62.4 AUTO INSTRUMENT_

Note: You already have the 'AUTO INSTRUMENT' File.

62.5 LAB DESCRIPTIONS_

Note: You already have the 'LAB DESCRIPTIONS' File.

62.55 AGGLUTINATION STRENGTH_

Note: You already have the 'AGGLUTINATION STRENGTH' File.

62.6 ACCESSION TEST GROUP_

```
Note: You already have the 'ACCESSION TEST GROUP' File.

 63   LAB DATA_
Note: You already have the 'LAB DATA' File.

 63.9999  ARCHIVED LR DATA_
Note: You already have the 'ARCHIVED LR DATA' File.

 64   WKLD CODE (including data)_
*BUT YOU ALREADY HAVE 'AMIS/CAP' AS FILE #64!
Shall I change the NAME of the file to WKLD CODE? NO// YES

 64   WKLD CODE (including data)_
Note: You already have the 'WKLD CODE' File.
_I will OVERWRITE your data with mine.

 64.03   WKLD LOG FILE

 64.05   NON WKLD PROCEDURES (including data)
I will OVERWRITE your data with mine.

 64.1    WKLD DATA

 64.19999 ARCHIVED WKLD DATA

 64.2    WKLD SUFFIX CODES (including data)
I will OVERWRITE your data with mine.

 64.21   WKLD CODE LAB SECT (including data)
I will OVERWRITE your data with mine.

 64.22   WKLD ITEM FOR COUNT (including data)
I will OVERWRITE your data with mine.

 64.3    WKLD INSTRUMENT MANUFACTURER (including data)
I will OVERWRITE your data with mine.

 64.5    LAB REPORTS_
Note: You already have the 'LAB REPORTS' File.

 64.6    INTERIM REPORTS_
Note: You already have the 'INTERIM REPORTS' File.

 64.7    CUMULATIVE_
Note: You already have the 'CUMULATIVE' File.

 65     BLOOD INVENTORY_
Note: You already have the 'BLOOD INVENTORY' File.

 65.4    BLOOD BANK UTILITY_
*BUT YOU ALREADY HAVE 'BLOOD DONOR UTILITY' AS FILE #65.4!
Shall I change the NAME of the file to BLOOD BANK UTILITY? NO// YES

 65.4    BLOOD BANK UTILITY_
Note: You already have the 'BLOOD BANK UTILITY' File.

 65.5    BLOOD DONOR_
Note: You already have the 'BLOOD DONOR' File.

 65.9    LAB LETTER (including data)_
Note: You already have the 'LAB LETTER' File.
I will MERGE your data with mine.

 65.9999  ARCHIVED BLOOD INVENTORY

 66     BLOOD PRODUCT_
```

```
Note: You already have the 'BLOOD PRODUCT' File.

66.2 BLOOD BANK VALIDATION (including data)
I will OVERWRITE your data with mine.

66.5 OPERATION (MSBOS)

66.9 BLOOD COMPONENT REQUEST

67 REFERRAL PATIENT_
*BUT YOU ALREADY HAVE 'REFERRAL' AS FILE #67!
Shall I change the NAME of the file to REFERRAL PATIENT? NO// YES

67 REFERRAL PATIENT_
Note: You already have the 'REFERRAL PATIENT' File.

67.1 RESEARCH_
Note: You already have the 'RESEARCH' File.

67.2 STERILIZER_
Note: You already have the 'STERILIZER' File.

67.3 ENVIRONMENTAL_
Note: You already have the 'ENVIRONMENTAL' File.

67.4 NON PATIENT WORKLOAD

67.9 LAB MONTHLY WORKLOADS_
*BUT YOU ALREADY HAVE 'WORKLOAD' AS FILE #67.9!
Shall I change the NAME of the file to LAB MONTHLY WORKLOADS? NO// YES

67.9 LAB MONTHLY WORKLOADS_
Note: You already have the 'LAB MONTHLY WORKLOADS' File.

67.99999 ARCHIVED LAB MONTHLY WORKLOADS

68 ACCESSION_
Note: You already have the 'ACCESSION' File.

68.2 LOAD/WORK LIST_
Note: You already have the 'LOAD/WORK LIST' File.

68.4 WORKLIST HEADINGS_
Note: You already have the 'WORKLIST HEADINGS' File.

69 LAB ORDER ENTRY_
Note: You already have the 'LAB ORDER ENTRY' File.

69.1 COLLECTION LIST_
Note: You already have the 'COLLECTION LIST' File.

69.2 LAB SECTION PRINT_
Note: You already have the 'LAB SECTION PRINT' File.

69.9 LABORATORY SITE_
Note: You already have the 'LABORATORY SITE' File.

69.91 LR ROUTINE INTEGRITY CHECKER (including data)_
Note: You already have the 'LR ROUTINE INTEGRITY CHECKER' File.
I will OVERWRITE your data with mine.

95 LAB JOURNAL_
*BUT YOU ALREADY HAVE 'JOURNAL' AS FILE #95!
Shall I change the NAME of the file to LAB JOURNAL? NO// YES

95 LAB JOURNAL_
```

```

Note: You already have the 'LAB JOURNAL' File.

SHALL I WRITE OVER FILE SECURITY CODES? No// Y (Yes)
NOTE: This package also contains BULLETINS
  SHALL I WRITE OVER EXISTING BULLETINS OF THE SAME NAME? Yes// <RETURN> (Yes)
NOTE: This package also contains SORT TEMPLATES
  SHALL I WRITE OVER EXISTING SORT TEMPLATES OF THE SAME NAME? Yes// <RETURN> (Yes)

NOTE THAT FILE SECURITY-CODE PROTECTION HAS BEEN MADE

Moving exported 'LR' routines into Surgery name space.

Loading LROSPLG      Saving as SROSPLG
Loading LROSPLG1    Saving as SROSPLG1
Loading LROSPLG2    Saving as SROSPLG2

All routines restored

    Updating your AUTOMATED LAB INSTRUMENTS entry in the package
    file with the correct current version number (5.2)...
    The ASK PROVIDER field (#10) in the Laboratory Site file (#69.9)
    is set to Yes to comply with OERR Alert requirements

^LS(95) global is obsolete, it is replaced by ^LAB(95)

    Moving LAB JOURNAL Data from ^LS(95) to ^LAB(95)

Transfer complete

    The global ^LS(95) will be deleted in a later version.

10.0 Appendix B: Upgrade Installation Fast Instructions

The Laboratory Version 5.2 Installation process consists of ten steps:

1. Pre-Database Conversion (patch lr__0510.05p).
2. Save Old LR and LA routines and Lab and DD globals.
3. Delete the old routines and restore the new routines.
4. Database Conversion (LR52CNV).
5. IHS Lab Utilities V. 5.2 (BLRINIT).
6. Installation Laboratory V. 5.2 (LAINIT).
7. Installation Laboratory V. 5.2 (LRINIT).
8. Post conversion setup.
9. Post conversion testing.
10. Releasing system to users.

Ensure that the Cumulative ran successfully for the previous day

10.1.1.1 Step 1 – Pre-Database Conversion (IHS Patch lr__0510.05p)

```
>D ^%RR lr__0510.05p
>D ^LR5XCNV 1. Run all tasks at once
>D ^LR5XTIME
```

10.1.1.2 Step 2 – Saving the Old LA and LR Routines and Globals to a Host File

Save your old routines and LAB and DD globals

Remove **ALL** users from the system. DO NOT use the disable Kernel log-on option.

This also stops Taskman which must remain running and functional.

Do backup

Stop journaling.

```
>D ^%GCH      ^L*      4      3
```

Stop all Auto Instrument interfaces.

```
>S ^LA("STOP",X) = ""
```

Where X represents the AUTO INSTRUMENT file (#62.4) internal entry number.

Example:

```
LSI #1 X=1, LSI #2 X=11
>D ^XUP
Check system status to ensure that TaskMan is running.
Check for sufficient space in the database. D ^%SP
>D ^%RS lr51.old.rtn LA* LR*
```

10.1.1.3 Save the LAB Global >D ^%GS lab51old.gbl ^LAB

Save your old DD(63.04) global.

```
>D ^%GS      dd6304.old      ^DD(63.04
```

Note: NO CLOSING PARENTHESIS]

10.1.1.4 Step 3 – Deleting and restoring the routines LR, LA and BLR routines sets.

Delete routines.

```
>D ^%RDEL LR* -LRZ* -LRLABEL4 LA* -LAZ*
```

Restore the BLR routines

```
>D ^%RR blr_0520.r
```

Restore the LA routines

```
>D ^% RR la__0520.r
```

Restore the LR routines

```
>D ^%RR lr__0520.r
```

10.1.1.5 Step 4 - Database Conversion

```
>D ^LR52CNV No
Verify Exception Report as you did for LR5XCNV
D ^LR52TIME
```

10.1.1.6 Step 5 - Installation (IHS Utilities Package Upgrade Laboratory V. 5.2)

```
>D ^BLRINIT
```

10.1.1.7 Step 6 - Installation (Package Upgrade Laboratory V. 5.2 Auto-Instrument File)

```
>D ^LAINIT
```

10.1.1.8 Step 7 - Installation (Package Upgrade Laboratory V. 5.2 Lab Files)

```
>D ^LRINIT
```

10.1.1.9 Step 8 – Post Conversion Setup

```
>D P^DI ACCESSION TEST NUMERIC IDENTIFIER ^LOOP
EDIT ENTRIES BY: AREA// <RETURN>
START WITH AREA: FIRST// <RETURN>
```

```
D P^DI    BLR MASTER CONTROL
D P^DI    LABORATORY SITE      DEFAULT INSTITUTION
D P^DI    HOSPITAL      INSTITUTION      ^LOOP
EDIT ENTRIES BY: NAME// <RETURN>
START WITH NAME: FIRST// <RETURN>
>D ^%GCH  ^L*      4      2
```

10.1.1.10 Step 9 – Post-Conversion Testing

Exercise ordering, accessioning, verification, and results reporting options used by your site.

10.1.1.11 Step10 – Releasing System to Users

Step 10 releases the system back to the users.

Restart your LSI (Auto Instrument interface(s)). Send a few test data streams from each interfaced instrument. Ensure that the data is being processed into ^LAH global and is verifiable.

Reschedule your tasked and backup procedures. Ensure that LRTASK* options have the correct times and output.
