APPENDIX 1: URBAN PROGRAM RESULTS—DATA SOURCES..... 46

FY 2015 URBAN PROGRAM RESULTS SUMMARY AND ANALYSIS

Introduction: Background and Data Collection

Urban programs reached a milestone with GPRA reporting this year. FY 2015 marks the tenth year urban programs have reported GPRA (Government Performance and Results Act) data. As in previous years, urban programs reported on a subset of clinical GPRA measures, including three of four GPRAMA (GPRA Modernization Act) measures.

In FY 2015, urban programs reported data for 17 clinical GPRA/GPRAMA measures and two contextual measures (Diabetes Diagnosed Ever and Documented A1c). Sixteen of the GPRA measures had specific targets for FY 2015 and one long term measure (Childhood Weight Control) had no specific target for FY 2015. Urban programs are required to meet the same targets as Federal and Tribal programs for the measures they report.

Like Tribal programs, urban programs are not required to use the Resource Patient Management System (RPMS) as their patient data management system. However, unlike Tribal programs, urban programs are required to report GPRA/GPRAMA data in order to receive funding. Many urban programs have opted to use RPMS and the Clinical Reporting System (CRS), a software application that runs off of RPMS, to report GPRA data. CRS data is validated and the measure logic is updated at least annually. Therefore, data from different CRS sites can be combined and reported as an aggregate rate.

In FY 2015, as in previous years, urban programs that have not opted to use RPMS and CRS were allowed to perform a 100% audit and submit GPRA results in Excel spreadsheet format. The National GPRA Support Team provides detailed instructions and an Excel template for non-RPMS programs to report data; however, data from non-CRS programs is not combined with CRS data, as it cannot be validated by an external source. Therefore, only data from urban programs reporting via CRS are included in the official urban GPRA results.

During FY 2015, 33 urban programs reported GPRA/GPRAMA data, unchanged from FY 2014. Twenty-four urban programs reported data via RPMS/CRS and 9 reported via Excel spreadsheet from a non-RPMS data source. One program that had been submitting data via Excel spreadsheet began reporting via CRS in FY 2015. In previous years, the number of programs that reported via CRS out of the total number of urban programs reporting was:

FY 2014: 23 of 33
FY 2013: 24 of 33
FY 2012: 24 of 35
FY 2011: 21 of 34
FY 2010: 18 of 34
FY 2009: 11 of 35

FY 2015 URBAN PROGRAM RESULTS SUMMARY AND ANALYSIS

The final results for all 33 urban programs are included in this FY 2015 Urban Program Report, including individual dashboards for each program, and three national aggregate dashboards.

FY 2015 Measures and Results

In FY 2015, urban programs reported data for 16 measures with targets, two contextual diabetes measures with no targets, and the Childhood Weight Control measure, a long-term measure with no specific target for FY 2015. Results from the 24 urban programs that reported via CRS were used to calculate whether measures with targets were met or not met.

Urban programs currently report three of four clinical GPRA measures that are now classified as GPRAMA measures: Diabetes: Good Glycemic Control, Childhood Immunizations, and Depression Screening. Urban programs do not yet report data for the CVD Comprehensive Assessment GPRAMA Measure.

In FY 2015, urban programs met one out of 16 measure targets. The one measure met by urban programs was Diabetes: Controlled Blood Pressure.

Urban programs did not meet the remaining 15 measures with specific targets, including Diabetes: Good Glycemic Control, Diabetes: LDL Assessed, Diabetes: Nephropathy Assessed, Pneumococcal Immunization, Influenza Immunization, Childhood Immunization, Pap Screening, Mammography Screening, Colorectal Cancer Screening, Tobacco Screening, Alcohol Screening, DV/IPV Screening, Depression Screening, Prenatal HIV Screening, and Breastfeeding Rates.

However, despite not meeting the majority of targets, urban programs did improve considerably over FY 2014 performance on many measures. Overall, urban programs performed better on 11 measures in FY 2015 compared to FY 2014. Measures that improved include: Diabetes: LDL Assessed, Diabetes: Nephropathy Assessed, Influenza Immunization, Pap Screening, Mammography Screening, Colorectal Cancer Screening, Tobacco Cessation Counseling, Alcohol Screening, DV/IPV Screening, Prenatal HIV Screening, and Breastfeeding Rates. The measures with the largest improvement were the Mammography Screening and Prenatal HIV Screening measures, which each improved by 3.5% between 2014 and 2015. The Tobacco Cessation Measure improved by 2.6% and the Diabetes: Nephropathy Assessed measure improved by 2.4%.

Urban programs did not meet any of the GPRAMA measure targets, and did not improve over FY 2014 results on the three GPRAMA measures reported.

FY 2015 URBAN PROGRAM RESULTS SUMMARY AND ANALYSIS

Breakout Results

There are three categories of urban programs: Comprehensive Service programs, Limited Service programs, and Outreach and Referral programs. A comprehensive program provides direct medical care to patients for 40 or more hours per week, though the range of services varies among programs. A limited program provides direct medical care to patients for less than 40 hours per week. An outreach and referral program provides mental health, substance abuse, health education and referral services, but no direct medical care.

There are 21 programs that provide comprehensive services to patients, and in FY 2015, 14 of these programs reported data via CRS. There are 7 programs with limited service, 6 of which reported data via CRS, and 5 outreach and referral programs, 4 of which reported data via CRS. Nine programs (7 comprehensive, 1 limited, 1 outreach and referral) reported via Excel spreadsheet.

All urban programs are required to report data on GPRA measures regardless of whether they provide the screening or service to their patients directly. Therefore, results from limited and outreach and referral programs often are incomplete, and their results for many measures are often below the average.

Among CRS programs, the 14 Comprehensive Service urban programs had the highest average results for all measures except Childhood Immunizations, Pap Screening, and Colorectal Cancer Screening. Limited Service programs had the highest average for Childhood Immunizations and Pap Screening. Outreach and Referral programs had the highest average for Colorectal Cancer Screening. Outreach and Referral programs had the lowest rates for all remaining measures except Pneumococcal Vaccination, which was slightly above the rate achieved by Limited Service programs but below that of Comprehensive programs.

Also, Comprehensive Service programs exceeded both the IHS/Tribal national rates and targets for Diabetes: Controlled Blood Pressure by achieving a rate of 65.6%. The national target was 63.8% and the national result was 62.5%. Comprehensive Service programs also achieved the same rate as IHS/Tribal programs for Diabetes: Good Glycemic Control.

Individual Program Results

While reviewing individual urban program results in this report, it is important to keep in mind the limits of the various data collection methods. Non-CRS sites report results on spreadsheets, and are not required to submit supporting documentation. IHS cannot validate results from non-RPMS electronic systems, and these manual audits have not been independently verified. Finally, while CRS results can be validated, some urban programs perform double data-entry with another information system. As a result, measure results can be impacted by the timeliness, accuracy, and completeness of data entry into RPMS. Therefore, all results, but particularly those from sites not reporting through CRS, should be viewed with some caution. Also note that if a program did not report any data for a specific measure, the result is categorized as “no data.”
