FY 2016 URBAN PROGRAM RESULTS SUMMARY AND ANALYSIS

Introduction: Background and Data Collection

Since FY 2006, urban programs have reported data for a subset of the clinical GPRA (Government Performance and Results Act) measures reported by federal and tribal Indian health programs. In FY 2016, urban programs reported a total of 20 clinical measures, including three of four GPRAMA (GPRA Modernization Act) measures. Urban programs are required to meet the same targets as Federal and Tribal programs for all of the measures they report.

Like tribal programs, urban programs are not required to use the Resource Patient Management System (RPMS) as their patient data management system. However, unlike tribal programs, urban programs are required to report GPRA/GPRAMA data in order to receive funding. Most urban programs have opted to use RPMS and the Clinical Reporting System (CRS), a software application that runs off of RPMS, to report GPRA data. CRS data is validated and the measure logic is updated twice annually. Therefore, data from different CRS sites can be combined and reported as an aggregate rate. About one-third of urban programs have not opted to use RPMS/CRS for GPRA reporting. In FY 2016, as in previous years, urban programs that have not opted to use RPMS and CRS were allowed to perform a 100% audit and submit GPRA results in Excel spreadsheet format. The National GPRA Support Team provides detailed instructions and an Excel template for non-RPMS programs to report data during the second, third, and fourth quarters of the GPRA year; however, data from non-CRS programs is not combined with CRS data, as it cannot be validated by an external source. Therefore, only data from urban programs reporting via CRS are included in the official urban GPRA results.

During FY 2016, all 33 contracted urban programs reported end-of-year GPRA/GPRAMA data. 23 of 33 urban programs reported data via RPMS/CRS, and 10 reported via Excel spreadsheet from a non-RPMS data source. One program that had been submitting data via CRS switched to non-RPMS reporting in FY 2016. In previous years, the number of programs reporting via CRS was:

FY 2015: 24 of 33
FY 2014: 23 of 33
FY 2013: 24 of 33
FY 2012: 24 of 35
FY 2011: 21 of 34
FY 2010: 18 of 34
FY 2009: 11 of 35

The final, end-of-year results for all 33 urban programs are included in the FY 2016 Urban Program Report, including individual dashboards for each program, and three national aggregate dashboards.

FY 2016 URBAN PROGRAM RESULTS SUMMARY AND ANALYSIS

FY 2016 Measures and Results

In FY 2016, urban programs reported data for 20 clinical measures, including 12 existing measures with targets, 4 new measures with baseline targets, 2 revised measures with baseline targets, and 2 contextual diabetes measures with no targets. Results from the 23 urban programs that reported via CRS were used to calculate whether measures with targets were met or not met.

Urban programs currently report three of four clinical GPRA measures classified as GPRAMA measures: Diabetes: Good Glycemic Control, Childhood Immunizations, and Depression Screening. Urban programs do not report data for the CVD Comprehensive Assessment GPRAMA Measure.

Measures with baseline targets are automatically “met” with any result, so urban programs met all six measures with baseline targets.

Urban programs also met 3 of the 12 measures with specific numeric targets. These measures were: Diabetes: Controlled Blood Pressure, Breastfeeding Rates, and the Childhood Weight Control long-term measure.

Urban programs did not meet the remaining nine measures with specific targets, including Diabetes: Good Glycemic Control, Diabetes: Nephropathy Assessed, Pneumococcal Immunization, Childhood Immunization, Pap Screening, Mammography Screening, Colorectal Cancer Screening, Tobacco Cessation, and Depression Screening.

However, despite not meeting the majority of targets, urban programs did improve considerably over FY 2015 performance on many measures. Overall, urban programs performed better on 9 measures in FY 2016 compared to FY 2015.

Measures that improved include: Diabetes: Good Glycemic Control, Diabetes: Controlled Blood Pressure, Pneumococcal Immunization, Childhood Immunizations, Colorectal Cancer Screening, Tobacco Cessation, Depression Screening, Childhood Weight Control, and Breastfeeding Rates. The measures with the largest improvement were Diabetes: Controlled Blood Pressure and Childhood Immunizations, which improved by 6.8% and 8.6%, respectively, between 2015 and 2016. The Colorectal Cancer Screening measure also improved over the 2015 rate by 3.3%, and Tobacco Cessation improved by 2.3%. (Note: the Breastfeeding Rates measure also improved from 12.5% to 50.0% but this measure has a very low denominator so large increases or decreases are not significant.)

Urban programs did not meet any of the GPRAMA measure targets, but did improve over FY 2015 results on all three reported GPRAMA measures (Diabetes: Good Glycemic Control, Childhood Immunizations, and Depression Screening).

FY 2016 URBAN PROGRAM RESULTS SUMMARY AND ANALYSIS

Results by Program Type

There are three service categories of urban programs: Comprehensive Service programs, Limited Service programs, and Outreach and Referral programs. A Comprehensive Service program provides direct medical care to patients for 40 or more hours per week, though the range of services varies among programs. A Limited Service program provides direct medical care to patients for less than 40 hours per week. An Outreach and Referral program provides mental health, substance abuse, health education and referral services, but no direct medical care.

There are 21 urban programs that provide comprehensive service to patients, and in FY 2016, 13 of these programs reported data via CRS. There are 7 programs that provide limited service, 6 of which reported data via CRS, and 5 outreach and referral programs, 4 of which reported data via CRS. The remaining ten programs (8 comprehensive, 1 limited, 1 outreach and referral) reported via Excel spreadsheet.

All urban programs are required to report data on GPRA measures regardless of whether they provide the screening or service to their patients directly. Therefore, results from Limited and Outreach and Referral programs often are incomplete and below average compared to Comprehensive Service programs.

Among CRS programs, the Comprehensive Service urban sites had the highest average results for all measures except Childhood Immunizations. Limited Service programs had the highest average for Childhood Immunizations and the same rate for Breastfeeding as comprehensive programs (however the denominator for the Breastfeeding measure is very low overall and extremely low for limited service programs). Outreach and Referral programs did not have the highest average for any measure, but did slightly better than Limited Service programs on both Influenza Immunization measures.

Also, urban Comprehensive Service programs exceeded both the IHS all national rate and target for Diabetes: Controlled Blood Pressure by achieving a rate of 73.6%. The national target was 65.0% and the national result was 68.3%. Comprehensive Service programs also outperformed the IHS all rate for the Diabetes: Good Glycemic Control GPRAMA measure, achieving 48.1%, compared to 46.9%, however, both fell short of the national target of 49.5%.

Individual Program Results

This report contains dashboards summarizing final GPRA results from each urban program. When reviewing these results, it is important to keep a few factors in mind. Non-CRS sites report GPRA results via Excel spreadsheet, and are not required to submit supporting documentation and therefore IHS cannot validate or verify these results. Additionally, while CRS results can be validated, some urban programs perform double data-entry with RPMS and another information system. As a result, measure results can be impacted by the timeliness, accuracy, and completeness of data entry into RPMS. Therefore, all results, but particularly those from sites *not* reporting through CRS, should be viewed with some caution. Also note that if a program reported zero patients in both the numerator and denominator for a specific measure or did not report any result at all, the result is
