Preface

This manual contains the installation guide for the Indian Health Service (IHS) Current Procedural Terminology (CPT), Version 2018 (ACPT 2.18).

1.0 Release Notes

Note: Read the entire notes files prior to attempting any installation.

1.1 General Information

- This release contains the annual CPT/HCPCS code updates for fiscal year/calendar (FY/CY) 2018.
- As part of the annual update, this release will run the following cleanup utilities before updating the CPT codes:
 - Inactivate CPT codes that were improperly inactivated.
- The CPT Category file has been updated for 2018. This includes updates to existing ranges.
- Following the category update, the 2018 CPT and Modifier code sets for both CPT and HCPCS will be installed.
- As part of the annual update, this release will run the following consistency reports after updating the CPT codes:
 - Active duplicate CPT/HCPCS codes
 - This report will display CPT/HCPCS codes present in the local system which contain active duplicates.
 - Only one active entry should exist for a code, which assists with data consistency and integrity.
 - Sites may choose to manually inactivate any duplicates - we recommend the most recently updated entry be left active.
 - Active CPT/HCPCS codes not found in the annual code set
 - This report will display CPT/HCPCS codes present in the local system that are active but do not exist in the annual code set.
 - Common examples of entries in this report include locally added CPT codes (which are not part of the standard release) and improperly inactivated CPT codes (missed patch/inactivation or local modification).
 - Sites may choose to manually inactivate any "invalid" codes on this list - Example: 94725 was inactivated 1/1/12 but remains active on the local system.
- As part of the CPT Category update, this release will scan the CPT file and update the Category assignments as needed.

Glossary

CPT Codes

One of several codes sets used by the healthcare industry to standardize data, allowing for comparison and analysis. Current Procedural Terminology was developed and is updated annually by the American Medical Association and is widely used in producing bills for services rendered to patients. CPTs include codes for diagnostic and therapeutic procedures, and specify information that differentiates the codes based on cost. CPT codes are the most widely accepted nomenclature in the United States for reporting physician procedures and services for federal and private insurance third-party reimbursement.

FileMan

The database management system for RPMS.

KIDS

Kernel Installation and Distribution System consists of programs that function as a set of standard software tools. These tools provide a uniform interface between the underlying operating system and Veterans Health Information Systems and Technology Architecture (VistA) application modules. Kernel supports VistA modules through the coordination of database, device, menu management, background job scheduling, security, auditing, and programming functions. Kernel Installation and Distribution System is the module that is used to install the appropriate tools for each application.

RPMS

Resource and Patient Management System is a decentralized integrated solution for management of both clinical and administrative information in these healthcare facilities. Flexible hardware configurations, over 50 software applications, and network communication components combine to create a comprehensive clinical, financial, and administrative solution; a solution that can stand alone or function in concert with other components as needed.
