Preface

This manual provides information regarding the release and installation of the Dental/EDR (Electronic Dental Record) Interface package enabling the set up and running of the interface.
1.0 Release Notes

The Dental/EDR interface is the way to send data bi-directionally from the Electronic Dental Record (EDR) to the Resource and Patient Management System (RPMS). The EDR was designed to meet the needs of the dental program. The interface is used to send patient and provider data from RPMS to the EDR for accuracy of patient records. Dental procedure information is sent back to populate and complete patient records in Patient Care Component (PCC).

This installation is the first phase in sending data between the two systems. This version of the software includes:

- An initial upload of all living patients to the EDR.
- An initial upload of all dentists to the EDR.
- Sending in real time new patient registrations.
- Sending in real time patient updates.
- Sending in real time dental provider additions and updates.
- Receiving in real time dental procedure information for the V DENTAL file.
- Installation sets the Registration Trigger in the PROTOCOL file to an inactivated state. After the Initial Patient Upload and the Provider Upload is completed, the BADE Protocols must be activated to support normal registration activity. See the EDR GOBY directions for further details.
- Although this RPMS BADE application was designed to be fully operational without the use of the Ensemble Integration Engine for the transport of EDR HL7 messages, BADE has only been verified and released to use with the EIE component.

Since the interface uses the HLO options, which are part of the HL7 version 1.6 application, the user must be familiar with the following documents:

These manuals help the user navigate the HLO menus and options, and may be found at http://www.va.gov/vdl.
2.0 Installation Notes

- Prefix: BADE
- Current Version: 1.0
- Warning: Read entire notes file prior to attempting any installation

2.1 General Information

- Make a copy of this distribution for offline storage.
- Print all notes and readme files.
- Capture the terminal output during the installation using an auxport printer attached to the terminal at which you are performing the software installation. This will insure a printed audit trail should any problems arise.

2.2 Contents of Distribution

- bade0100.k – KIDS file
- bade010i.pdf – Installation guide and Release notes
- bade010t.pdf – Technical manual
- bade010u.pdf – User manual

2.3 Required Resources

- Kernel v8.0 patch 1015 or higher
- FileMan v22 patch 1002 or higher
- Ensemble v2009.1.2 or later
- XB/ZIB Utilities Version 3.0 patch 11 or later
- HL7 Version 1.6 patch 1006 or later
- AG__0710 Patch 5 or later
- AVA 93.2 patch 19 or later
- IHS PCC SUITE version 2.0 or later
3.0 Installation Instructions

3.1 Pre-Installation
There is no pre-installation preparation necessary for the Dental/EDR Interface package.

3.2 Installation
- Under KIDS, load then install bade0100.k
- Answer YES to all “Want to continue installing this build?” questions
- Answer YES to the menu rebuild
- Answer NO to the other questions

3.3 Set Up Post-Installation HL7
This setup is ONLY for sites running Ensemble (Figure 4-1). For any other system, see the VistA HL7–Optimized (HLO) Installation Manual/Release Notes (hl_1_6_126_ig.pdf) document for further instructions on HLO setup.

![Event monitoring menu ...](#)
Systems Link Monitor
Filer and Link Management Options ...
Message Management Options ...
Interface Developer Options ...
Site Parameter Edit
HLO  HL7 (Optimized) MAIN MENU ...

Figure 4-1: Post-Installation HL7
The HL7 main menu should look like the menu above. If the HLO menu is not there, the site is missing HL patch 1006.

3.3.1 Edit Logical Links
In Figure 4-2, choose the interface Developer Options and then type **EL** (Edit Link).

<table>
<thead>
<tr>
<th>EA</th>
<th>Application Edit</th>
</tr>
</thead>
<tbody>
<tr>
<td>EP</td>
<td>Protocol Edit</td>
</tr>
<tr>
<td>EL</td>
<td>Link Edit</td>
</tr>
<tr>
<td>VI</td>
<td>Validate Interfaces</td>
</tr>
<tr>
<td></td>
<td>Reports ...</td>
</tr>
</tbody>
</table>

Figure 4-2: Edit Link
3.3.1.1 The OUTBOUND LINK

The outbound link was included in the KIDS build. The site must enter its own DNS DOMAIN in Figure 4-3, and click the LLP TYPE to proceed to the next screen.

Figure 4-3: DNS Domain

Figure 4-4 is an EXAMPLE ONLY. Sites must fill in the IP address and port where the messages are being sent.

Figure 4-4: IP Address and Port

3.3.1.2 The INBOUND LINK

HLO has only one inbound link for ALL applications. If the site is using E-prescribing, this link is already configured. The name of this link is HLO RPMS.

Set up the site DNS DOMAIN and click LLP TYPE.
Figure 4-5 is an example for a test server:

![Figure 4-5: Example for Test Server](image)

The standard port for this is set to 5001 for production servers and 5026 for test servers (Figure 4-6). Use caution when changing this port.

![Figure 4-6: Standard Port for Test Server](image)

### 3.3.2 HLO System Parameters File (779.1)

- Check and edit the HLO SYSTEM PARAMETERS file in FileMan.
- Make sure the site’s domain and station number are correct.
- Turn HLO off.
- Enter HLO RPMS as the standard listener.

**Figure 4-7** shows an example of these settings:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Domain Name</td>
<td>HL7.DEMO.EDR.COM</td>

</tbody>
</table>

**Figure 4-7: HLO System Parameters File**

### 3.3.3 Set Up the HLO Application

- First select the HLO setup on the HL7 Main Menu.
- Next select APPS – HLO Application Registry.

**Figure 4-8: HLO Application Setup**

The application RPMS-DEN was included in the KIDS build. Review the application for any problems.
Select HLO APPLICATION REGISTRY APPLICATION NAME: RPMS-DEN
APPLICATION NAME: RPMS-DEN/
Package File Link: DENTAL/

Select HL7 MESSAGE TYPE:
### 3.4 Assign Security Keys

Three security keys are available for interface users:

- **BADEZMGR**–Given to those who need access to both menus for the initial upload and the maintenance of the interface.
- **BADEZUPL**–Given to those who are doing the initial patient and provider upload.
- **BADEZSN**–Given to those responsible for sending or resending individual messages.

### 3.5 Set Up the Parameters

There are several site-configurable parameters available from the menus ([Figure 4-16](#)). The Main menu is locked with the BADEZMGR key.

<table>
<thead>
<tr>
<th>Option Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UPL</td>
<td>Dental Interface Upload Menu</td>
</tr>
<tr>
<td>MAN</td>
<td>Dental Interface Management</td>
</tr>
</tbody>
</table>

**Figure 4-11: Main Menu**

The Upload menu, [Figure 4-17](#), is for the initial upload of patient and provider data, and is locked with the BADEZUPL key. The menu is listed below, including the parameters that must be reviewed. See the *RPMS-EDR User Manual* for a full description of how to use these options.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>REP</td>
<td>Reprocess an Inbound HL7 Message</td>
</tr>
<tr>
<td>RES</td>
<td>Resend Outbound HL7 Message</td>
</tr>
</tbody>
</table>

Figure 4-13: Dental Interface Management Menu

### 3.5.1 TCT–Pt Count for Throttle Action (BADE EDR THROTTLE CT)

This parameter on the Upload menu, shown in Figure 4-19, determines how many patients to process before the computer checks to see if it should stop or hold for a few seconds before continuing. The default value is set at ten. The maximum count is 1000.

Figure 4-14: Pt Count for Throttle Action

### 3.5.2 THR–Throttle Patient Upload (BADE EDR PT THROTTLE)

This parameter on the Upload menu, shown in Figure 4-20, controls the number of seconds the interface holds before it continues processing patients after the THROTTLE COUNT is met. The default value is zero. The maximum number is 20.

Figure 4-15: Throttle Patient Upload

### 3.5.3 PUP–Pause Patient Load (BADE EDR PAUSE PATIENT LOAD)

If this parameter located on the Upload menu, shown in Figure 4-21, is set to YES, the patient upload stops when the next THROTTLE COUNT is met. The default is set to YES until the initial upload is started. The patient load and restart options check this parameter, and if it is NO, they will not run assuming the load is already running.
3.5.4 PPV–Pause Provider Upload (BADE EDR PAUSE PROV UPLOAD)

If this parameter located on the Upload menu, shown in Figure 4-22, is set to YES, the provider upload stops after the next provider is processed. The default is set to YES until the initial upload is started. The provider load and restart options check this parameter, and if it is NO, they will not run assuming the load is already running.

3.5.5 CLN–Default Clinic for Interface (BADE EDR DEFAULT CLINIC)

This parameter located on the Manager menu, shown in Figure 4-23, enables sites wanting to see these visits in the EHR to set up a default dental clinic under which to store the visits. This default clinic is only be used if the clinic is not sent in the message.
3.5.6  DEFT Default Time for Dental Visit (BADE EDR DEFAULT TIME)

This parameter located on the Manager menu, shown in Figure 4-24, enables sites to set a default time for visits coming from the EDR. The EDR Dental application does not pass a Visit Time in the HL7 DFT message. This parameter is used if the site wishes to have a default Visit time other than 12 noon. If nothing is entered, a default time of 12:00 noon is assigned to visits.

![Figure 4-19: DEFT Default Time for Dental Visit](image)

3.6  Mail Group

A new mail group named RPMS DENTAL, shown in Figure 4-25, is included in the KIDS build. This mail group receives notifications when there is an error in message processing. Be sure to set up this mail group and include as members those who would be fixing and reprocessing messages that contain errors.

![Figure 4-20: RPMS DENTAL Mail Group](image)
4.0 Sample Installation

This section includes sample installation steps. This is a new package with all new routines, so there should not be anything on the system to be backed up or compared.

Also, no options need to be taken out of service because the components to be added will not be directly added to any options. Be sure to do the menu rebuild, Figure 5-1, because several new menus and options are added.

Enter a Host File: c:\temp\bade0100.k

KIDS Distribution saved on May 22, 2009@13:19:36
Comment: IHS DENTRIX Interface v1.0

This Distribution contains Transport Globals for the following Package(s):
  DENTAL/EDR INTERFACE 1.0
OK to continue with Load? NO// y YES

Distribution OK!

Want to Continue with Load? YES//
Loading Distribution...

Build DENTAL/EDR INTERFACE 1.0 has an Environment Check Routine
Want to RUN the Environment Check Routine? YES//
  DENTAL/EDR INTERFACE 1.0
Will first run the Environment Check Routine, BADEEC01

Use INSTALL NAME: DENTAL/EDR INTERFACE 1.0 to install this Distribution.

Figure 5-3: Loading a Distribution

4.3 Verify Checksums

Select Item 2 (Figure 5-4) and verify Figure 5-5: Installation Option Install Package.
Checksums are listed below.

1 Load a Distribution
2 Verify Checksums in Transport Global
3 Print Transport Global
4 Compare Transport Global to Current System
5 Backup a Transport Global
6 Install Package(s)
   Restart Install of Package(s)
   Unload a Distribution

Select Installation Option: 2 Verify Checksums in Transport Global

Figure 5-4: Verify Checksums in Transport Global
### 4.4 Install Package

Select Item 6 and install the package (Figure 5-5). There is an environment check and the package will not install if other patches are missing.

<table>
