10.0 Documentation Resources

10.1 System Documentation

Online VPS system documentation can be generated through the use of several Kernel options, including, but not limited to:

- %INDEX.
- Menu Management.
- Inquire Option.
- Print Option File.
- VA FileMan.
- Data Dictionary Utilities.
- List File Attributes.

For more option listings and further information about other utilities that supply online technical information, see the Decentralized Hospital Computer Program (DHCP) Kernel Reference manual.

10.1.1 %INDEX

The %INDEX option analyzes the structure of a routine to determine in part, if the routine adheres to RPMS programming standards. The output can include the following components:

- Compiled list of errors and warnings.
- Routine listing.
- Local variables.
- Global variables.
- Naked globals.
- Label references.
- External references.

Running %INDEX for a specified set of routines allows users to discover any deviations from RPMS programming standards that exist, and to see how routines interact with one another (i.e., which routines call or are called by other routines).

To run %INDEX for the VPS system:

At the “Routine(s)?” prompt, type the <<CC>> namespace.
10.1.2 Inquire Option

The Inquire menu management option provides the following information about a specified option:

- Option name.
- Menu text.
- Option description.
- Type of option.
- Lock (if any).

In addition, all items on the menu are listed for each menu option. To secure information about <<RPMSpackage>> options, specify the << >> namespace.

10.1.3 Print Option File

The Print Option File utility generates a listing of options from the Option file (#19). Users can print all of the entries or a single option or range of options.

10.1.4 List File Attributes

This VA FileMan option allows users to generate documentation pertaining to files and file structure. The standard format of this option provides the following data dictionary information for a specified file:

- File name and description.
- Identifiers.
- Cross-references.
- Files pointed to by the file specified.
- Files that point to the file specified.
- Input, print, and sort templates.

In addition, the following applicable data is supplied for each field in the file:

- Field name, number, title, and description.
- Global location.
- Help prompt.
- Cross-references.
- Input transform.
- Date last edited.
• Notes.
Using the Global Map format of this option generates an output that lists the following information:
• All cross-references for the file selected.
• Global location of each field in the file.
• Input, print, and sort templates.
For a comprehensive listing of <<package name>> files, see Section 6.0.

10.2 Online Help
In addition to system documentation, RPMS includes special help displays for most menu options and data entry prompts. Typing a question mark (?) at the “Select . . . Option” prompt displays information related to the current option, where:

<table>
<thead>
<tr>
<th>Typing:</th>
<th>Displays:</th>
</tr>
</thead>
<tbody>
<tr>
<td>One question mark (?)</td>
<td>A list of all options accessible from the current option.</td>
</tr>
<tr>
<td>Two question marks (??)</td>
<td>A list of all accessible options and their formal names</td>
</tr>
<tr>
<td>Three question marks (????)</td>
<td>A brief description for each option in a menu.</td>
</tr>
<tr>
<td>One question mark (?) Followed by an option name (?OPTION)</td>
<td>Extended help, if available, for that option</td>
</tr>
</tbody>
</table>
11.0 SAC Requirements/Exemptions

None.
**Acronym List**

<table>
<thead>
<tr>
<th>Acronym</th>
