Preface

The purpose of this document is to provide users with an overview of changes to the Diabetes Management System (DMS) introduced in Patch 9. In addition, instructions are provided for using DMS to conduct a 2016 Diabetes Audit, which is included in this patch.

Note: Resource and Patient Management System (RPMS) software, including the DMS, is subject to periodic updates based on the Indian Health Service (IHS) Standards of Care and Clinical Practice Recommendations for Type 2 Diabetes Mellitus (DM).
1.0 Introduction

1.1 DMS Changes

DMS v2.0 p9 includes several changes and additions, including tools for conducting the 2016 Diabetes Audit. A summary of the changes follows:

1.1.1 Audit Changes

- A prompt has been added for the user to select whether or not to include pregnant patients when running the Diabetes Audit, creating an Export file, or running a Special Diabetes Program for Indians (SDPI) Key Measures Report (Figure 1-1). If a patient has more than two pregnancy-related visits during the report period, the patient will be identified as being pregnant. The diagnosis codes used to determine pregnancy status can be displayed using the View Taxonomy option (Section 2.4.5).

```
Select one of the following:

I     Include Pregnant Patients
E     Exclude Pregnant Patients

Select whether to include or exclude pregnant patients in the audit: E/Exclude Pregnant Patients

okay, hold on...this may take a few minutes..
```

Figure 1-1: Added option to include or exclude pregnant patients

- An option has been added to the audit output menu, to run the SDPI Key Measures Report with 2016 elements (Figure 1-2). The SDPI Key Measures Report with last year’s elements has been retained and renamed, SDPI Key Measures Report (2015 Version).

```
Select one of the following:

1     Print Individual Reports
2     Create AUDIT EXPORT file
3     Cumulative Audit Only
4     Both Individual and Cumulative Audits
5     SDPI Key Measures Report (2015 Version)
6     SDPI Key Measures Report (2016 Version)
```

Figure 1-2: Options on Diabetes Audit Report menu

- A new category of Severely obese (BMI 40.0 or above) has been added to the BMI Category section on the Cumulative Audit.

- Non-HDL Cholesterol has been removed from the 2016 Diabetes Audit.
- The age distribution in the Cumulative Audit has been altered to show <20 years and 20-44 years, where 20 replaces 15 displayed in previous audit years.

- **LDL <100** has been removed from the Combined Measure and **Statin prescribed** has been added.
  - The Combined Measure is calculated for patients 40 years of age or older.
  - For patients who are less than 40, the individual audit is marked: **This is only calculated for patients 40 years of age and older.**

- There is a new Cumulative Audit section related to comorbidities (Figure 1-3).

Figure 1-3: Comorbidity Section on 2016 Cumulative Audit
1.1.2 New Reports

Several new reports have been added. Two are designed as aids for those who are responsible for maintaining the Diabetes Register. The other two reports are designed to allow a user to review the components of nationally defined taxonomies as well as list the Systematized Nomenclature of Medicine (SNOMED) codes used in the 2016 Diabetes Audit.

- **INA List Possible Inactive Pts in the DM Register**, is on the Reports Menu. It is an alternative to running QMan searches looking for patients who have not had a visit to a primary clinic during the audit year.

- **DXNR Patients with DM Diagnosis and not on Register**, is on the Reports Menu. It has been developed as an alternative to a QMan search for patients who are not on the Register but who do have one or more diagnoses of diabetes and perhaps should be on the Register.

- **VTAX View Taxonomies**, is on the DM16 Diabetes Audit menu. This report allows the components of standard IHS-released taxonomies of diagnosis codes, Current Procedural Terminology (CPT) codes, medications, and Logical Observation Identifiers Names and Codes (LOINC) Codes that are used in the 2016 Diabetes Audit to be viewed.

- **VSML View SNOMED Lists**, is on the DM16 Diabetes Audit menu. This report allows the SNOMED codes used by the 2016 Diabetes Audit to be viewed.

1.1.3 Logic Changes

**Note:** Audit Logic is included in Appendix A: for reference.

- All references to diagnoses include both ICD9 as well as ICD10 diagnosis codes. All diagnosis taxonomies include both ICD9 and ICD10 codes.

- Regardless of how they are recorded, height is displayed with two decimal digits and weight as an integer (whole number), disregarding any decimal places.

- The DM Audit logic was modified to include both dental exam data from the V Dental file as well as the V CPT file.

- The logic for **PATIENTS W/POSITIVE TB W/O DOCUMENTED TX COMPLETE** has been modified to exclude Problem List items with a status of Deleted.

- SNOMED codes have been added for Cessation Counseling, Exercise Education, Nutrition Education, and DM Other Education. Lists of SNOMED codes may be reviewed using the new menu option, **VSML View SNOMED Lists**.

- SNOMED terms have been added to the logic for depression, hypertension, and diabetes for the Diabetes Audit. Lists of SNOMED codes may be reviewed using the option, **VSML View SNOMED Lists**.
• The DM Audit taxonomy logic has been modified to include a check to prevent an error if the National Drug Codes (NDC) package has not been installed.

• Tanzeum and Trulicity have been added under GLP-1 medication therapy.

• Edoxaban (Sarvysa) has been added to Aspirin/Anti-Platelet therapy.

• Jardiance has been added to SGLT-2 inhibitor therapy.

• The User Setup option under Register Maintenance has been corrected so that a new user may be added as an authorized user of a Register but not assigned Manager Authority.

1.1.4 Diabetes Patient Care Summary (Supplement Changes)

• The routine that calls the Diabetes Patient Care Summary in the Electronic Health Record (EHR) was modified to display the current version of that summary.

1.2 Visual DMS Changes

• Visual DMS has been updated so that any new installation will include a check for a default directory. This will prevent errors when generating Visual DMS reports for the Audit, Health Summaries, and other reports which load to WORD or EXCEL.

• When Visual DMS is installed, a Default Directory dialog (Figure 1-4) will display.

![Default Directory dialog](image)

Figure 1-4: Default Directory dialog

• A shared directory should be identified where the user will have both read and write capabilities but which will meet HIPAA standards for storing patient health information. Full directions for installing and assigning a default directory are in Section 9.0.

• The changes outlined in Section 1.1 for DMS are also incorporated into Visual DMS, including the new options for viewing the SNOMED lists used in the diabetes reports as well as viewing/printing any DM Audit Taxonomy. The new reports, for identifying potentially inactive patients on the Register and for identifying potential patients who should be added to the Register, are not included in Visual DMS.
2.0 Prepare for the Audit

There are two important prerequisites when preparing for an electronic Diabetes Audit in RPMS:

- Ensure that patients to be audited are actively receiving care at the healthcare facility.
- Review and update taxonomies of medications, health factors, patient education topics, and laboratory tests as needed.

2.1 Guidelines for Selecting Patients

The IHS Division of Diabetes Treatment and Prevention (Division of Diabetes) has provided the following guidelines for selecting patients for the 2016 Annual Diabetes Audit.

- **Include Patients who:**
  - Have a diagnosis of diabetes – Type 1 or Type 2.
  - Are American Indian or Alaska Native.
  - Have at least one visit to a primary care clinic during the audit period. Primary care clinics include:
    - General (01)
    - Diabetic (06)
    - Internal Medicine (13)
    - Pediatric (20)
    - Family Practice (28)
    - Chronic Disease (50)
    - Endocrinology (69)

- **Exclude Patients who:**
  - Received the majority of their primary care outside your facility during the audit period.
  - Are currently on dialysis and received the majority of their primary care at the dialysis unit during the audit period.
  - Have died before the end of the audit period.
  - Are women who were pregnant during any part of the audit period.
  - Have pre-diabetes (metabolic syndrome, impaired fasting glucose [IFG], or impaired glucose tolerance [IGT]) only.
  - Have moved – permanently or temporarily (should be documented).
Unless the diabetes register is updated frequently, some of the patients listed as being in an Active status might not qualify to be included in the Annual Audit. Identify those patients and exclude them from the Annual Audit. A new report, **INA List Possible Inactive Pts in the DM Register**, has been added to assist with this process. Directions on how to run this report are in Section 2.2.2.

### 2.2 Use the Diabetes Register for the 2016 Diabetes Audit

The Diabetes Register may be used for the 2016 audit by excluding patients who do not meet the audit criteria. Alternatively, a subset of the Diabetes register may be used including only those patients who meet the audit criteria.

To use patients in the Diabetes Register for the audit, there are several reports available to identify patients currently classified as active but who do not meet the audit criteria:

- **Section 2.2.1** shows an option to identify patients in the Register who have a Register Diagnosis of IGT or Gestational Diabetes Mellitus (GDM).
- **Section 2.2.2** shows a how to use a new report, **INA List Possible Inactive Pts in the DM Register**, to identify patients with a status of Active who have not had a primary care visit during the audit period and therefore do not meet the audit criteria of being an active patient.
- **Section 2.2.3** shows how to change the status of a patient on the Register. When patients who do not meet the definition of active with a diagnosis of Type 1 or Type 2 Diabetes have been identified, their status can be changed by using the option to Edit Register Data under Patient Management in the DMS. Either the traditional RPMS Patient Management option or the Patient Management in Visual DMS can be used.

**Note:** For the 2016 Annual Audit, the IHS Division of Diabetes requires review of the care provided during the calendar year ending December 31, 2015. Reports identifying patients with an active status should be run for the time period between 1/1/2015 and 12/31/2015.

### 2.2.1 Identify IHS Diabetes Register Patients with GDM or IGT

The IHS Diabetes Register allows entry of GDM and IGT as Register diagnoses. It has been recommended for a number of years that the IHS Diabetes Register include only patients with a diagnosis of Type 1 or Type 2 Diabetes. Patients with GDM and IGT should be followed via inclusion in another register.

The QMan search in Figure 2-1 will retrieve a list of patients in the register who have been given a Register Diagnosis. In this dialogue, a search is made for patients on the register with a Register Diagnosis of GDM. The same process can be used to find patients on the Register who have a Register Diagnosis of IGT.
Q-MAN OPTIONS -> SEARCH PCC Database (dialogue interface)
What is the subject of your search? LIVING PATIENTS // REGISTER <Enter>

Total: 1

Figure 2-2: QMan search results
Addendum to User Manual Prepare for the Audit
January 2016

When both searches have been run and lists of patients who are on the Diabetes Register with a diagnosis of GDM or IGT have been produced, use the Edit Register Data under Patient Management in the DMS to change the status of these patients to Unreviewed prior to running the Annual Audit. Patients having an initial Register Diagnosis of IGT or GDM may have gone on to develop Type 2 Diabetes and the Register Diagnosis may not have been updated accordingly.

2.2.2 Identify Possible Inactive Patients in the IHS Diabetes Register

It is no longer necessary to run a QMan search to identify patients who have not had at least one primary care visit during the 12 months of the audit period. A new report, INA List Possible Inactive Pts in the DM Register, can be especially useful at sites that have large numbers of patients whose Register status might not be accurate.

The new report is contained in the RP Reports menu of the Diabetes Management System.

Begin by selecting **RP** Reports . . .

Type **INA** to initiate the report for Possible Inactive Patients

Enter the name of the Register that is to be reviewed for inactive patients.

Select **A** for patients on the Register with a Register status of ACTIVE.

At the Clinic prompt, type [BGP PRIMARY CARE CLINICS]
This taxonomy contains the primary care clinics used by official GPRA reports. You may use just these six primary care clinics, or you may add additional clinics such as ENDOCRINOLOGY.

Enter the beginning and ending dates for searching for a visit to one or more of these primary care clinics. Note that the 2016 Annual Audit is for the time frame between January 1, 2015 and December 31, 2015. To be considered to be an active patient, there should be at least one documented visit to a primary care clinic during that time frame.

Choose the option to Browse the list. Note the number of pages in the report in the upper right hand corner of the screen.

- The report may be printed by typing **PL** at the Select Action prompt.
- When prompted for **DEVICE**: enter the printer name or number where the report should be printed.

The sequence to generate this report follows:

```
RP Reports . . .
Select Reports Option: INA List Possible Inactive Pts in the DM Register
```
This report will list patients who are on the diabetes register who have not had a visit to a set of primary care clinics in a date range defined by the user. The report provides a way to identify patients who could possibly be inactivated in the register.

Enter the Name of the Register: IHS DIABETES REGISTER

Select the Patient Status for this report

Select one of the following:

A   ACTIVE
I   INACTIVE
T   TRANSIENT
U   UNREVIEWED
D   DECEASED
N   NON-IHS
L   LOST TO FOLLOW-UP
NON NONCOMPLIANT

Which Status: A//CTIVE

Enter the list of clinics that you have determined to be primary care clinics. You can enter them 1 at a time or enter a taxonomy using the '[]' notation.

Enter CLINIC: [BGP PRIMARY CARE CLINICS BGP PRIMARY CARE CLINICS]

Members of BGP PRIMARY CARE CLINICS Taxonomy =>

GENERAL
DIABETIC
INTERNAL MEDICINE
PEDIATRIC
WELL CHILD
FAMILY PRACTICE

Enter ANOTHER CLINIC: ENDOCRINOLOGY 69
Enter ANOTHER CLINIC:

The following have been selected =>

GENERAL
DIABETIC
INTERNAL MEDICINE
PEDIATRIC
WELL CHILD
FAMILY PRACTICE
ENDOCRINOLOGY

Want to save this CLINIC group for future use? No// (No)

Enter the time frame to look for visits.

Enter Beginning Visit Date: 1/1/15 (JAN 01, 2015)
Enter Ending Visit Date: T (OCT 13, 2015)
Select one of the following:
P         PRINT the List
B         BROWSE the List on the Screen

Output Type: P// BROWSE the List on the Screen

Select one of the following:
I         Include ALL Patients
E         Exclude DEMO Patients
O         Include ONLY DEMO Patients

Demo Patient Inclusion/Exclusion: E// xclude DEMO Patients

2.2.3 Update Patient Register Status

Patient Register Status may be updated using Menu selection 1 under Patient Management, to Edit Register Data, or in Visual DMS, using the option Patient Profile under Patient Management.

2.2.3.1 To Edit Register Data in DMS:

1. Open the Patient Management menu of DMS.

Addendum to User Manual
January 2016
2. At the “Select Action” prompt, type 1 and press Enter.

3. Move the cursor to the Status field and type the new status value over the old one.

4. Press the down arrow key to move the cursor to the “Command” prompt.

5. Type Save and press Enter.

6. To record the status update, type Exit at the “Command” prompt and press Enter. The window will close.

2.2.3.2 To Edit Register Status in Visual DMS

1. Select the desired Patient.

2. Open the Patient Management menu. (Figure 2-3)
3. Click **Patient Profile**. The **Patient Profile** dialog (Figure 2-4) is displayed.
4. From the **Status** list, select the new status.

- **A.** Active patients who receive their primary healthcare at a facility and who have had care at that facility within the last year.
- **I.** Inactive patients who have not been seen within the last two years.
- **T.** Transient patients seen at the clinic within the past year but who do not receive their primary diabetic care at a facility, and only visit the clinic periodically for medications or other services.
- **U.** Unreviewed patients on the Register who have not had a chart audit and medical review.
- **D.** Deceased patients.
Note: This status will be automatically documented if a date of death is recorded in the patient registration file. If a patient’s status is changed to deceased in the Register, the patient registration file is not automatically updated.

- N. Non-IHS patients who receive their diabetes care at a facility.
- L. Lost to follow-up patients seen at a facility within the past two years but who have not had a visit in the last year.
- N. Noncompliant patients with repeated documented refusals of recommended services.

Note: There are no official definitions of Register Status, although recommendations for classifying Register patients can be provided by Area Diabetes Consultants or their staff. The definitions that follow can be used as a guideline in the absence of Area-defined criteria.

5. Click Save.
6. Close the dialog.

2.3 Create a Template of Patients for the 2016 Diabetes Audit

If the IHS Diabetes Register is not current or has not been routinely used for management of patients with diabetes, it might be advantageous to use a QMan search to identify patients with diabetes who have had a visit to a primary care clinic during the audit period. The template created from this query can be used to run the 2016 Annual Diabetes Audit. One can run the QMan search using either the general patient population (Section 2.3.1) or the Diabetes Register (Section 2.3.2). In either case, if non-IHS clients with Diabetes are seen at the clinic or included in the Register, another Attribute called Classification should be used. The Classification for Indian/Alaska Native patients is 01.

2.3.1 Create a Template using the General Population

The QMan search in the sequence that follows shows the creation of a template looking for patients with at least one diagnosis of diabetes during the audit period and who have had at least one visit to a primary care clinic during the audit period.

Fileman users please note =>
This template will be attached to IHS' PATIENT file (#9000001)

Enter the name of the SEARCH TEMPLATE: DM AUDIT 2016
   Are you adding 'DM AUDIT 2016' as a new SORT TEMPLATE? No/  Y  (Yes)
DESCRIPTION:
   No existing text
   Edit? NO/

Next, you will be asked about creating your template in background...

Answer 'YES' to run in background.
To run in background means to pass the template creation job off to Taskman. Your terminal will be released so additional RPMs work may be performed while the template is being created. When finished, Taskman will send you a Mailman message indicating that the job is ready. Then, you may use the template in future Qman searches, PGEN, VGEN and other reports that can utilize templates.

Answer 'NO', to create the search template in foreground.

While the template is being created, data will be displayed to your screen. When the job has finished, you will have the opportunity to go to PGEN or VGEN.

Remember ... some templates may take a very long time to finish.

Press ENTER to continue or '^' to quit:

Want to run this task in background? No// (No)

...HMMM, JUST A MOMENT PLEASE...

2.3.2 Create a Template of Register Patients for the Audit

If a Diabetes Register exists but Register diagnoses and patient status have not been maintained, it might be easier to create a template of active patients on the register who have had at least one visit to a primary clinic during the audit year with a diagnosis of diabetes. The QMan search demonstrating how to create that template is shown in the following sequences:

<table>
<thead>
<tr>
<th>What is the subject of your search?</th>

PATIENTS         2103 D ICD CODE  VISIT
(Alive)         NUMBER #
2.3.3 Report for Patients with Diabetes who are not on the Register

A new report has been added to the Diabetes Management System that will allow identification of patients who have one or more diagnoses of Diabetes but are not currently on the Register. It may be useful to run this report before conducting an audit to see if these patients should be added to the Register. Directions for running this report are shown in the following sequence. A sample report is shown in Figure 2-5.

1. At the Diabetes Management System menu, type `RP` and press Enter.

2. Select **DXNR Patients with DM Diagnosis and not on Register**.

3. At the “Enter the Name of the Register” prompt, type some portion of the register name and press Enter.

   ```
   DXNR Patients with DM Diagnosis and not on Register.
   This report will list patients who are not on the diabetes register but who have had a visit with a diagnosis of diabetes in a date range specified by the user.
   Enter the Name of the Register: PARKER
   1 PARKER DIABETES REGISTER
   2 PARKER DIALYSIS PATIENTS
   CHOOSE 1-2: 1 PARKER DIABETES REGISTER
   ```

4. At the “Choose” prompt, type the number corresponding to the register name and press Enter.

   ```
   Enter the time frame to look for visits with a diabetes diagnosis.
   Enter Beginning Visit Date: 1/1/15  (JAN 01, 2015)
   Enter Ending Visit Date: 12/31/15  (DEC 31, 2015)
   ```

5. At the “Enter Beginning Visit Date” prompt, type the beginning date and press Enter.

6. At the “Enter Ending Visit Date” prompt, type the ending date and press Enter.
7. At the “How many diagnoses must the patient have had in that time period” prompt, type the answer as a number and press Enter.

<table>
<thead>
<tr>
<th>Select one of the following:</th>

Figure 2-5: Sample Report of patients with diabetes who are not on the register
2.4 Update Taxonomies

The taxonomies in Figure 2-6 are referenced in the 2016 RPMS Diabetes Audit. There is one new taxonomy for the 2016 Audit: BGP PQA STATIN MEDS. This taxonomy is pre-populated using the NDC numbers of Statin Drugs and does not need to be reviewed or populated on a local basis, so it is not listed as one of the taxonomies needing review. In addition, for Audit 2016 the DM AUDIT ANTIPLATELET DRUG taxonomy has been replaced by the DM AUDIT ANTIPLT/ANTICOAG RX taxonomy.

You will notice in the list below that several of the taxonomies begin with BGP rather than DM AUDIT. These taxonomies as well as a number of the DM AUDIT taxonomies are shared between the Government Performance and Results Act (GPRA) program and the DMS. It is imperative that staff work together to review and update these taxonomies.

Even though taxonomies might have been updated for the 2015 Annual Audit, they must be reviewed and updated again before running the 2016 Annual Audit. This is due to potentially new medications being added to the pharmacy formulary, new lab tests offered, or new education topics provided.

<table>

<tr>
<td>31) DM AUDIT SGLT-2 INHIBITOR DRUG DRUG</td>
</tr>
<tr>
<td>32) DM AUDIT STATIN DRUGS DRUG</td>
</tr>
</tbody>
</table>
The taxonomies can be reviewed and updated with the TU16 option under the DM16 menu of the Diabetes Audit or the corresponding Visual DMS Update Taxonomy option.

When updating lab test taxonomies, attempting to add a test panel to a laboratory test taxonomy that should only include individual tests results in display of a warning. This warning is displayed because the audit logic cannot correctly display hemoglobin A1C, lipid breakdown, or estimated GFR according to value categories if panels are included in the taxonomy. Panel tests have no values associated with them; only the tests within the panels have values.

Some taxonomies might not have any members. For example, if providers at a facility never prescribe INVOKANA, the DM AUDIT SGLP-2 DRUG taxonomy will not have any members.

Taxonomies in the following sections must be reviewed carefully in light of software changes or changes introduced in the 2016 Diabetes Audit. Possible members of the taxonomies are listed, but are by no means to be considered comprehensive.

### 2.4.1 Drug Taxonomies

The guidelines of Table 2-1 are provided for populating drug taxonomies. New drugs can be available each year, so an updated list is provided for each of the drug taxonomies. Review the lists of drugs with the pharmacist to be sure of those that are available at a facility or may be ordered as Outside Medications.

While there are two separate taxonomies for GLP-1 medications, DM AUDIT GLP-1 ANALOG DRUGS and DM AUDIT INCRETIN MIMETICS, the components of those taxonomies are displayed together as GLP-1 Meds on the audit.

Combination drugs should be added to the taxonomy for each of the components of that drug.

Medications entered as Outside Medications via the RPMS EHR can be orderable items, but they might not be in the facility’s drug file. If the medication is not in the facility’s drug file, the outside medication will not be stored in the V Medication file in Patient Care Component (PCC). If that is the case, those medications might not be found as drugs available to add to medication taxonomies, nor will they be included in the Diabetes Audit or Diabetes Patient Care Summary.

### 2.4.2 Education Topic Taxonomies

All three DM Audit Education topic taxonomies; DM AUDIT DIET EDUC TOPICS, DM AUDIT EXERCISE EDUC TOPICS, and DM AUDIT OTHER EDUC TOPICS, should be reviewed and updated to ensure that any new education topics are included.

Table 2-2 provides examples of education topics that may have been used during the audit period and that should be included in the three DM Education Topic taxonomies. These lists are not inclusive of all potential topics. Please review the Audit Logic in Appendix A: carefully, as many topics will be automatically picked up because of a prefix of DM-, DMC-; an ICD-9 or ICD-10 code; a SNOMED code pertaining to Diabetes; or a suffix of –N, -EX, or –MNT.

**Note:** If custom pick lists have been created for providers in EHR, it is possible that education topics may be recorded in the format of a SNOMED code followed by the topic; e.g., -44054006-EXERCISE instead of DM-EXERCISE. The audit logic has been revised to search not only for topics included in the Education taxonomies, but also by CPT code, Diagnosis, and topics with specific prefixes and suffixes. Please review the Audit Logic in Appendix A: to ensure that regardless of how Diabetes education is being recorded at your facility, the appropriate topics will be found for the audit.

### 2.4.3 Laboratory Test Taxonomies

Table 2-3 lists the taxonomies that must be reviewed for potential changes in laboratory testing at a facility each year. Note that the DM AUDIT ALT, DM AUDIT AST, and DM AUDIT CREATINE KINASE taxonomies are used to check for test values that would be indicative of an adverse reaction to Statin therapy.

#### Table 2-3: DM Audit Laboratory Test Taxonomies

</tr>
</tbody>
</table>

With the advent of reference laboratory interfaces and Point of Care result entry, there is considerable variation in test nomenclature. Diabetes Program staff are encouraged to solicit assistance from both laboratory and pharmacy staff in updating taxonomies.

When deciding which tests should be included in a taxonomy, it may be useful to review test results on a health summary for a known patient with diabetes whose Standards of Care are current. Once test names are determined, the appropriate tests can be added or deleted from taxonomies.
Figure 2-7 is a Health Summary sample with recommended taxonomy placement noted after the lab test on the health summary.

Figure 2-7: Sample Health Summary
2.4.4 LMR–List Labs or Medications Used at this Facility

A report provided in DMS displays the laboratory tests reported or the drugs prescribed at a facility during the audit period. In addition to displaying the laboratory tests or drugs, it identifies those that are already included in a taxonomy used by the audit. To run the laboratory tests version of this report:

10. At the Diabetes Management Systems menu, type **RP** and press Enter.

11. At the Reports menu, type **LMR** (List Labs/Medications Used at this Facility) and press Enter.

12. At the “Do you wish to list” prompt, type **L** (LAB TESTS) and press Enter.

13. Type the beginning and ending dates for the report (1/1/15 and 12/31/15 for the 2016 Annual Diabetes Audit), pressing Enter after each.

14. At the “Do you wish to” prompt, do one of the following:

   - To print the output, accept the default (**P**) by pressing Enter. A prompt asking for the device name displays; type the device’s name and press Enter.
   - To browse the output on the screen, type **B** and press Enter.

A sample report is shown in Figure 2-8.

Figure 2-8: Sample Report of Labs Reported during the Audit Period

To run the version of this report for the medications that have been prescribed:

1. At the Diabetes Management Systems menu, type RP and press Enter.

2. At the Reports menu, type LMR (List Labs/Medications Used at this Facility) and press Enter.

3. At the “Do you wish to list” prompt, type M (MEDICATIONS) and press Enter.

4. Type the beginning and ending dates for the report (7/1/15 and 12/31/15 for the 2016 Annual Diabetes Audit), pressing Enter after each. For all except Aspirin/Anti-Platelet Drugs, the audit only reviews medications prescribed during the last 6 months of the audit period. Aspirin/Anti-Platelet Drugs are reviewed for the entire year of the audit period (1/1/2015 through 12/31/2015 for the 2016 Annual Diabetes Audit).

5. At the “Do you wish to” prompt, do one of the following:
   - To print the output, accept the default (P) by pressing Enter. A prompt asking for the device name displays; type the device’s name and press Enter.
   - To browse the output on the screen, type B and press Enter.

A sample report is shown in Figure 2-9.
Figure 2-9: Sample Report of Drugs Prescribed during the Audit period

2.4.5 View/Print Any DM Audit Taxonomy

The option, View/Print Any DM Taxonomy, has been added to the Diabetes Management System under the 2016 Diabetes Program Audit Menu. It may be used to review any taxonomy, CPT Code, Diagnoses Codes, LOINC Codes, Medication, Laboratory Test, or Education Topic that is used by the 2016 Diabetes Audit.

- Select DA, the Diabetes QA Audit Menu.
- Select DM16, the 2016 Diabetes Program Audit.
- Select VTAX View/Print Any DM Audit Taxonomy.

A list of the taxonomies used in the 2016 Diabetes Audit are displayed (Figure 2-10). Note that there are six pages of taxonomies that may be displayed. The up arrow or down arrow may be used to browse the list of taxonomies.

Type S to indicate a selection will be made. Then enter the number preceding the taxonomy.
The taxonomy contents may be browsed on the screen or printed to a RPMS printer (Figure 2-10).

```

```
2.4.6 **View a SNOMED List Used by the DM Audit**

The option, View a SNOMED List Used by the DM Audit, has been added to the Diabetes Management System under the 2016 Diabetes Program Audit Menu. It may be used to review any SNOMED list that is used by the 2016 Diabetes Audit (Figure 2-12).

1. Select **DA**, the Diabetes QA Audit Menu.
2. Select **DM16** the 2016 Diabetes Program Audit
3. Select **VSML** View a SNOMED List Used by the DM AUDIT. A list of the SNOMED Lists used in the 2016 Diabetes Audit are displayed. Note that there are only five SNOMED Lists.
4. Type **S** to indicate a selection will be made.
5. Enter the number preceding the SNOMED List. The contents of the SNOMED List may be browsed on the screen or printed to a RPMS printer.

3.0 Run the 2016 Audit

The directions for creating and submitting an electronic Diabetes Audit data file are outlined in the Audit 2016 Instructions which follow or at: http://www.ihs.gov/MedicalPrograms/Diabetes/index.cfm?module=resourcesAuditResources

In RPMS, Diabetes Audits can be run for individual patients, a template of patients, patients in a Register, or a random sample of patients in a Register. Additional options exist for running the audit by Primary Care Provider, by Community, for only Indian/Alaska Native Patients, non-Indian/Alaska Native Patients, or both.

Output options include an individual audit, a cumulative audit, individual and cumulative audits, an SDPI Key Measures Report, or an Audit Export file. Even those doing manual audits may find it useful to print individual audits which most likely have some information on them, such as measurements.

3.1 Run an Individual Audit

Individual audits can be run at any time either via the Diabetes QA Audit Menu or via the Patient Management option to display the audit status. To run an individual audit using the Patient Management option:

1. At the Diabetes Management Systems menu, type PM and press Enter.

2. At the Patient Management menu, type 10 (Audit Status) and press Enter.

3. At the “Enter the Audit Date” prompt, type the ending date of the audit period desired and press Enter.

4. At the “Do you wish to print the Patient’s Name…?” prompt, do one of the following:
   - To not print the patient’s name on the audit sheet, accept the default (N) by pressing Enter.
   - To print the patient’s name, type Y and press Enter.

5. At the “Do you wish to” prompt, do one of the following:
   - To print the output, accept the default (P) by pressing Enter. A prompt asking for the device name displays; type the device’s name and press Enter.
   - To browse the output on the screen, type B and press Enter.

A sample individual audit is shown in Figure 3-1.

Figure 3-1: Individual Audit sample

3.2 Run a Cumulative Audit/Audit Report

Figure 3-2 shows a script to run a Cumulative Audit, also known as an Audit Report. The Audit Report can be either queued using the DM16 option in Visual DMS or run from the traditional RPMS menu. It is highly recommended that the 2016 Cumulative Audit be run and reviewed twice before creating a data file to submit for the Annual Diabetes Audit.

The first time, run a Cumulative Audit on all active members of the register with Type 1 and Type 2 Diabetes or on the created template of active patients with Type 1 or Type 2 Diabetes.
Review the initial Cumulative Audit carefully to be sure there are no audit elements that have no data or that have far larger or smaller numbers than would be expected. This will ensure that there is no missing data due to improperly populated taxonomies. If required, review taxonomy set up, edit taxonomies as needed, and run and review the Cumulative Audit again to make sure that problems are corrected before creating the Audit Export file.

Note that a list of taxonomies that have no members can display. It is perfectly acceptable to have taxonomies with no members, if the drugs or laboratory tests referenced are not used at a facility.
You have selected a register or template/cohort of patients. You can run the audit just for the subset of patients in the cohort or register who live in a particular community or have a particular primary care provider.

Limit the audit to a particular primary care provider? N//O

Limit the patients who live in a particular community? N//O

Select one of the following:
1 Indian/Alaskan Native (Classification 01)
2 Not Indian Alaskan/Native (Not Classification 01)
3 All (both Indian/Alaskan Natives and Non 01)

Select Beneficiary Population to include in the audit: 1// Indian/Alaskan Native (Classification 01)

Select one of the following:
1 Include Pregnant Patients
2 Exclude Pregnant Patients

Select whether to include or exclude pregnant patients in the audit: E//xclude Pregnant Patients

Okay, hold on...this may take a few minutes.

Note: When not running an official Audit, you may choose to include pregnant patients. Pregnant patients are identified as those who have had two or more pregnancy-related visits during the Audit period to a non-pharmacy clinic, or where the provider is not a CHR. The list of pregnancy-related diagnoses may be reviewed under the View/Print Taxonomy Lists.

There are 861 patients selected so far to be used in the audit.

Select one of the following:
A ALL Patients selected so far
R RANDOM Sample of the patients selected so far

Do you want to select: A//LL Patients selected so far

Select one of the following:
1 Print Individual Reports
2 Create AUDIT EXPORT file
3 Cumulative Audit Only
4 Both Individual and Cumulative Audits
5 SDPI Key Measures Report (2015 Version)
6 SDPI Key Measures Report (2016 Version)

Enter Print option: 1//3 Cumulative Audit Only

Select one of the following:
1 Include ALL Patients
2 Exclude DEMO Patients
3 Include ONLY DEMO Patients

Demo Patient Inclusion/Exclusion: E//xclude DEMO Patients

Select one of the following:
P  PRINT Output
B  BROWSE Output on Screen

Do you wish to: P// BROWSE Output on Screen

Figure 3-2: Running a Cumulative Audit (Audit Report)

If the PRINT Output option is selected, at the “Device” prompt, type the printer name. This report can be queued to run later as shown in Figure 3-3.

Device: HOME// Q <Enter> QUEUE TO PRINT ON
Device: P171 <Enter>
Start Date/Time: T02000 <Enter>
Device: P180

Figure 3-3: Queuing the report to run later

**Note:** A queued report cannot be printed to a locally connected printer, usually referred to as a Slave printer.

A sample 2016 Cumulative Audit is displayed in Figure 3-4.

### Immunizations

- **Influenza vaccine during Audit period**
  - 1,370 patients considered
  - 3,164 total patients
  - 43% compliance
- **Pneumococcal vaccine - ever**
  - 2,685 patients considered
  - 3,164 total patients
  - 85% compliance
- **Td/Tdap/DT - past 10 years**
  - 3,089 patients considered
  - 3,164 total patients
  - 98% compliance
- **Tdap - ever**
  - 3,078 patients considered
  - 3,164 total patients
  - 97% compliance

### Depression An Active Problem

- **Yes**
  - 645 patients considered
  - 3,164 total patients
  - 20% compliance
- **No**
  - 2,519 patients considered
  - 3,164 total patients
  - 80% compliance

### Lipid Evaluation

#### LDL cholesterol

- **LDL <100 mg/dl**
  - 1,528 patients considered
  - 3,164 total patients
  - 48% compliance
- **LDL 100-129 mg/dl**
  - 452 patients considered
  - 3,164 total patients
  - 14% compliance
- **LDL 130-189 mg/dl**
  - 157 patients considered
  - 3,164 total patients
  - 5% compliance
- **LDL >=190**
  - 5 patients considered
  - 3,164 total patients
  - 0% compliance
- **Not tested or no valid result**
  - 1,022 patients considered
  - 3,164 total patients
  - 32% compliance

#### HDL cholesterol

- **HDL <50 mg/dl**
  - 954 patients considered
  - 1,857 total patients
  - 51% compliance
- **HDL >=50 mg/dl**
  - 313 patients considered
  - 1,857 total patients
  - 17% compliance
- **Not tested or no valid result**
  - 590 patients considered
  - 1,857 total patients
  - 32% compliance

#### Triglycerides

- **TG <150 mg/dl**
  - 972 patients considered
  - 3,164 total patients
  - 31% compliance
- **TG 150-999 mg/dl**
  - 1,139 patients considered
  - 3,164 total patients
  - 36% compliance

Lipid Evaluation - Note these results are presented as population level CVD risk markers and should not be considered treatment targets for individual patients.

* CKD: eGFR < 60 or uACR => 30
** Known hypertension: Has hypertension listed as an active problem, or three visits with a diagnosis of hypertension ever (prior to the end of the Audit period).
*** For triglycerides: > 150 is a marker of CVD risk, not a treatment target; > 1000 is a risk marker for pancreatitis.
**** Comorbid conditions counted are: active depression, current tobacco use, severely obese (BMI 40 or higher), diagnosed hypertension, diagnosed CVD.
3.3 Create an Audit Export (Data) File

A script for running the 2016 Diabetes Audit and creating an Audit Export (Data) file for submission via the WebAudit is shown in Figure 3-5.

IHS recommends that the Annual Audit include the entire Active status category of Register patients unless a template must be created to eliminate patients on the register who are not active, do not have Type 1 or Type 2 diabetes, or otherwise do not meet the inclusion and exclusion criteria outlined in the Audit 2016 Instructions and in Section 2.1.

1. At the Diabetes Management Systems menu, type **DA** and press Enter.

2. At the Diabetes QA Audit menu, type **DM16** (2016 Diabetes Program Audit) and press Enter.

4. The following sequence displays:

    DM16  Run 2016 Diabetes Program Audit
    Select 2016 Diabetes Program Audit Option: DM16  Run 2016 Diabetes Program Audit

    In order for the 2016 DM AUDIT Report to find all necessary data, several taxonomies must be established. The following taxonomies are missing or have no entries:
    LABORATORY TEST taxonomy  [BGP CREATINE KINASE TAX] contains a panel test: SQL CK M KMB 5030 and should not.
    DRUG taxonomy  [DM AUDIT AMYLIN ANALOGUES] has no entries
    DRUG taxonomy  [DM AUDIT COLESEVELAM DRUGS] has no entries
    DRUG taxonomy  [DM AUDIT INCRETIN MIMETIC] has no entries
    DRUG taxonomy  [DM AUDIT SGLT-2 INHIBITOR DRUG] has no entries
    DRUG taxonomy  [DM AUDIT SULFONYLUREA-LIKE] has no entries
    End of taxonomy check. HIT RETURN:

    ASSESSMENT OF DIABETES CARE, 2016
    PCC DIABETES AUDIT

    Enter the Official Diabetes Register: IHS DEMO HOSPITAL

    Enter the date of the audit. This date will be considered the ending date of the audit period. For most data items all data for the period one year prior to this date will be reviewed.

    Enter the Audit Date:  12/31/15  (DEC 31, 2015)

    Select one of the following:
Addendum to User Manual
Run the 2016 Audit
January 2016

P Individual Patients
S Search Template of Patients
C Members of a CMS Register

Run the audit for: P// C Members of a CMS Register

Enter the Name of the Register: IHS DEMO HOSPITAL
Do you want to select register patients with a particular status? Y// ES
Which status: A// ACTIVE

There are 873 patients in the IHS DEMO HOSPITAL REGISTER register with a status of A.

You have selected a register or template/cohort of patients.
You can run the audit just for the subset of patients in the cohort or register who live in a particular community or have a particular primary care provider.

Limit the audit to a particular primary care provider ? N// O
Limit the patients who live in a particular community ? N// O

Select one of the following:
1 Indian/Alaskan Native (Classification 01)
2 Not Indian Alaskan/Native (Not Classification 01)
3 All (both Indian/Alaskan Natives and Non 01)

Select Beneficiary Population to include in the audit: 1// Indian/Alaskan Native (Classification 01)
Select one of the following:
I Include Pregnant Patients
E Exclude Pregnant Patients

Select whether to include or exclude pregnant patients in the audit: E// Exclude Pregnant Patients
okay, hold on...this may take a few minutes..

Note: When not running an official Audit, you may choose to include pregnant patients. Pregnant patients are identified as those who have had two or more pregnancy-related visits during the Audit period to a non-pharmacy clinic, or where the provider is not a CHR. The list of pregnancy-related diagnoses may be reviewed under the View/Print Taxonomy Lists.

There are 861 patients selected so far to be used in the audit.

Select one of the following:
A ALL Patients selected so far
R RANDOM Sample of the patients selected so far

Do you want to select: A// ALL Patients selected so far

Select one of the following:
1 Print Individual Reports
2 Create AUDIT EXPORT file
3 Cumulative Audit Only
4 Both Individual and Cumulative Audits
5 SDPI Key Measures Report (2015 Version)
6  SDPI Key Measures Report (2016 Version)

Enter Print option: 1// 2  Create AUDIT EXPORT file

The file generated will be in a "^" delimited format. You can use this file to review your data in EXCEL if you so choose.

Enter the name of the FILE to be Created (3-20 characters): DKR 2016 AUDIT

The file generated will be in a "^" delimited format. You can use this file to review your data in EXCEL if you so choose.

Enter the name of the FILE to be Created (3-20 characters): DKR 2016 AUDIT

I am going to create a file called dkr 2016 audit.txt which will reside in the X:\EXPORT directory on your RPMS server.
It is the same directory that the data export globals are placed. See your site manager for assistance in finding the file after it is created. PLEASE jot down and remember the following file name: ********** dkr 2016 audit.txt **********
It may be several hours (or overnight) before your report and flat file are finished.

The records that are generated and placed in file dkr 2016 audit.txt are in a format readable by Excel. For a definition of the format please see your user manual.

Is everything ok?  Do you want to continue? Y//ES

Select one of the following:

I  Include ALL Patients
E  Exclude DEMO Patients
O  Include ONLY DEMO Patients

Demo Patient Inclusion/Exclusion: E// xclude DEMO Patients

Won't you queue this ? Y// ES

Requested Start Time: NOW//T@2000

Figure 3-5: Creating an Audit Export file

Make a note of the file name and notify the RPMS site manager that a Diabetes Audit has been run. Provide the name of the file and the directory where the file is stored. The site manager will place the file in a shared folder on the server where it can be accessed and uploaded to the WebAudit.

3.4 Run an SDPI Report

The option to create an SDPI Key Measures Report using either the 2015 or 2016 elements resides under the Diabetes Audit Menu.

1. At the Diabetes Management Systems menu, type DA and press Enter.

2. Type DM16 (2016 Diabetes Program Audit) and press Enter.
3. Select **DM16** (Run 2016 Diabetes Program Audit) and follow the prompts as shown in the script in Figure 3-6 to generate an SDPI Key Measures Report.

Select 2016 Diabetes Program Audit Option: DM16  Run 2016 Diabetes Program Audit

In order for the 2016 DM AUDIT Report to find all necessary data, several taxonomies must be established. The following taxonomies are missing or have no entries:
- LABORATORY TEST taxonomy [BGP CREATINE KINASE TAX] contains a panel test: SQL C KMB 5030 and should not.
- DRUG taxonomy [DM AUDIT AMYLIN ANALOGUES] has no entries
- DRUG taxonomy [DM AUDIT COLESEVELAM DRUGS] has no entries
- DRUG taxonomy [DM AUDIT INCRETIN MIMETIC] has no entries
- DRUG taxonomy [DM AUDIT SGLT-2 INHIBITOR DRUG] has no entries
- DRUG taxonomy [DM AUDIT SULFONYLUREA-LIKE] has no entries

End of taxonomy check. HIT RETURN:

---

Figure 3-7: SDPI Key Measures Report sample
4.0 **Upload the Export (Data) File to WebAudit**

Upload the completed data file to the WebAudit for data cleaning, report generation, and submission of data to the IHS Division of Diabetes. For further information and WebAudit frequently asked questions, visit the IHS Division of Diabetes Audit website at:

To upload the file:

1. Request and activate a WebAudit account if you do not already have one.
2. Log in to the WebAudit.
3. Select **Enter Facility Info** from the left hand menu or from the Main Menu select **Facility Administration** then **Enter Facility Information**.
4. Enter the number of patients in your diabetes registry that meet the inclusion and exclusion criteria identified in the 2016 Audit Instructions and Section 2.1.
5. Click **Save**.
6. Select **Upload Data** from the left hand menu or from the Main Menu select **Data Processing** then **Upload Data**.
7. Select an **Audit Type**. For the Annual Audit submitted to the IHS Division of Diabetes, you will select **Annual Audit**. For all other audits, select **Interim Audit**.
8. Individuals with access to multiple facilities will need to select a Facility.
9. Click **Browse** and navigate to the data file, then click **Open**.
10. When the data file has been selected, click **Upload File**.
   a. If the upload of the data file is successful, you will receive a message on the screen telling you that the file was successfully uploaded.
   b. If the upload is unsuccessful, you will receive an on-screen message telling you that the file upload attempt was unsuccessful, with a brief description of the problem.
11. Once the file has been successfully uploaded, proceed with checking the data quality and generating reports, as described in the Audit 2016 Instructions.
5.0 Import the Audit Export (Data) File to Excel

When researching particular patients or data values, it may be helpful to import the Audit Export file into Excel so that data may be sorted or filtered. The 2016 Diabetes Audit Export file is a delimited text file. This means that the file has all of the audit data elements for each patient in a single row with fields separated by a caret (^). Not only can the file be uploaded to the WebAudit, but it can also be imported into Excel for local use. The data fields are identified by headers in the first row of the file.

Appendix B: provides information about the Audit Export file field definitions.

Figure 5-1 shows an Audit Export file opened in Notepad.

To import a file into Excel:

1. Open a blank Excel worksheet.
2. Click Open and browse to the folder containing the Audit Export file.
3. Change the file type from **All Excel Files** to **All Files** in the list (Figure 5-2). This is necessary in order to see the Audit Export file name, which is not in an Excel format at this time.

4. Select the Audit Export file to be imported.

5. Click **Open**. The **Text Import Wizard** dialog, Step 1 of 3 (Figure 5-3) displays.
6. If the Text Import Wizard does not correctly identify that this is a delimited file, select Delimited.

7. Click Next. The Text Import Wizard dialog, Step 2 of 3 (Figure 5-4) displays.
8. Under **Delimiters**, select **Other** and type a caret (^) in the field to the right of the **Other** choice.

9. Deselect **Tab**.

10. Click **Next**. Vertical lines will display between the columns of data.

11. Click **Finish** to complete the import to Excel.

Columns can be expanded and data sorted as desired. To save the file in Excel format:

1. Select **Save As**.

2. Save as type Excel. Save the Excel file in a secure folder as identified by the information technology staff at your facility.

**Note:** The Excel file cannot be uploaded to the WebAudit; the delimited text file must be uploaded.
6.0 Identify Patients with Errors on the Audit Export File

Since Medical Record Numbers and full Dates of Birth are no longer included in the Audit Export file or uploaded to the WebAudit, it may be somewhat challenging to identify patients whose records need review or correction.

To identify such records after data has been uploaded to the WebAudit, use the menu option in the WebAudit to do a Data Quality Check.

1. Of the several reports available to validate data uploaded, choose the option, Annual Audit Potential Data Entry Errors Details, as shown in Figure 6-1.

2. Scan through the errors. Use the link to add comments as needed or click the button to edit the record in order to gather additional data required to identify the patient.

   a. The **Yr/Mo of Birth**, **Sex**, and **Date of Diagnosis** may all be used to identify the patient either via iCARE or using the GEN Report option in the Diabetes Management System.
b. Once the patient is identified, the record may either be edited directly in the WebAudit using the View/Edit Data tool or may be corrected in RPMS and a new Audit Export file generated and uploaded.

In Figure 6-2, the first patient with a year and month of birth, 8/2001, has an invalid Date of Diagnosis which must be corrected.

Figure 6-2: Displaying Data Entry Detail Report

Two different options are shown using the GEN Report to assist in identifying the patient.

- Option 1: Identifying the patient by Date of Diagnosis
- Option 2: Identifying the patient by Register Status, Sex, and Year and Month of Birth.
6.1 Identify patients by Date of Diagnosis

1. Type **RP** at the Diabetes Management System main menu and press Enter.

2. Type **RR** and press Enter.

3. Type **GEN** and press Enter.

This report will produce a listing of Patients on a Register selected by the user. You will be asked (in three separate steps) to identify your selection criteria; what you wish displayed for each patient; and the sorting order for your list. You may save the logic used to produce the report for future use. If you design a report that is 80 characters or less in width, it can be displayed on your screen or printed. If your report is 81-132 characters wide, it must be printed - and only on a printer capable of producing 132 character lines.

   Do you want to use a PREVIOUSLY DEFINED REPORT? N// <Enter>

4. At the “Do you want to use a PREVIOUSLY DEFINED REPORT?” prompt, press Enter to accept the default (bypass the option to use a previously defined report).

REGISTER: IHS DIABETES USER: RUSSELL,DOROTHY

Figure 6-3: Report Summary of Patients displaying Date of Onset
6.2 Identify Patients by Date of Birth and Sex

This report may be run in order to identify patients who do not have a date of
diagnosis uploaded to the WebAudit. It is run much the same as the report searching
for Date of Onset, except on the Patient Selection Screen, Selection items will include
Date of Birth, Sex, and Register Status. The steps follow:

1. Type RP at the Diabetes Management System main menu and press Enter.

2. Type RR and press Enter.

3. Type GEN and press Enter.

This report will produce a listing of Patients on a Register selected by
the user. You will be asked (in three separate steps) to identify your
selection criteria; what you wish displayed for each patient; and the
sorting order for your list. You may save the logic used to produce the
report for future use. If you design a report that is 80 characters or less
in width, it can be displayed on your screen or printed. If your report is
81-132 characters wide, it must be printed - and only on a printer capable
of producing 132 character lines.

**Note:** More than one patient may have the same date of diagnosis and the additional print criteria of date of birth and sex should help identify the desired patient.
7.0 Display 2016 Diabetes Audit Logic

The revised logic for the 2016 Diabetes Audit is provided under the menu option DAL in the DA Diabetes QA Audit menu as shown in Figure 7-1.

1. At the Diabetes Management Systems menu, type DA and press Enter.

2. At the Diabetes QA Audit menu, type DAL (Display Audit Logic) and press Enter.

3. At the “Select DMS AUDIT ITEM DESCRIPTIONS AUDIT YEAR” prompt, type 2016 for the audit year and press Enter to display the item list (Figure 7-1).

4. At the “Select Action” prompt, type S and press Enter to enable selection of an audit logic item for review.

5. At the next “Select Action” prompt, type the number of the logic item to be displayed and press Enter.

6. Once the audit logic for a selected item is displayed, it may be printed by typing PL at the Select Action prompt of the logic item display.

7. Enter the desired printer for the output at the DEVICE prompt.

Appendix A: provides a complete listing of the logic for all audit items.
8.0 Audit Resources

Complete Diabetes Audit 2016 information can be found on the IHS Division of Diabetes website (Figure 8-1):
http://www.ihs.gov/MedicalPrograms/Diabetes/index.cfm?module=resourcesAudit

Figure 8-1: IHS Diabetes Care and Outcomes Audit website

IHS Standards of Care and Clinical Practice Recommendations: Type 2 Diabetes are at:
http://www.ihs.gov/MedicalPrograms/Diabetes/index.cfm?module=soc
9.0 **Diabetes Patient Care Summary**

The Diabetes Patient Care Summary or Supplement displays as the last page of a Health Summary or can be displayed or printed as a standalone document either from RPMS or EHR. The Diabetes Patient Care Summary uses the same taxonomies and most of the logic used for the Diabetes Audit. Results display based on the last data available rather than a specified audit period.

Except for ACE Inhibitor/ARB drugs, Statin drugs, and Aspirin/Anti-platelet/Anticoagulant drugs, no other drugs are displayed on the Diabetes Patient Care Summary. Medication information may be readily accessed via other EHR and RPMS options. The word, “Maybe” as seen in the sample Diabetes Patient Care Summary (Figure 9-1) is an indication that a visit to a Dental Clinic or a provider type of Dentist was documented. No specific Dental Code, CPT code, or exam code was documented. The word, “Maybe”, may also be displayed for Eye Exam and Foot Exams when a visit to a specific clinic or provider type was found, but not the specific code for the Diabetic exam. Missing or inaccurate data might be a warning that taxonomies should be reviewed and updated. To display the Diabetes Care Summary:

1. At the Diabetes Management Systems menu, type **DA** and press Enter.

2. At the Diabetes QA Audit menu, type **DPCS** (Display a Patient’s DIABETES CARE SUMMARY) and press Enter. The Diabetes Care Summary (Figure 9-1) displays.

10.0 Visual DMS – 2016

10.1 Installation

In order to use Visual DMS for Diabetes Management System v2.0 p9, you must have the correct client installed. The process of installing the client has been modified so that the person installing the software may select a default directory where temporary files for displaying health summaries, audits, and other reports may be stored. This will prevent errors that some users have experienced in the past where the default directory was not a shared directory.

Selection of a default directory requires identification of a shared directory where users of the Visual DMS software will have read and write capability but which also meets the facility requirements for storing protected health information.

The steps for installing Visual DMS follow.
1. Find the folder where the Visual DMS files, bdm_0200.09.msi and bdm_0200.09.exe are located (Figure 10-1).

![Figure 10-1: Visual DMS files](image)

2. Double-click the bdm_0200.09.exe file to launch the Windows Installer (Figure 10-2).
3. Select **Everyone**.

4. Click **Next** and follow the prompts for a usual Windows installation process.

During the installation process, a prompt will appear on the screen (Figure 10-3) to identify a directory where temporary files for Visual DMS reports like health summaries, audit reports, SDPI reports, etc., will be stored.

A shared directory should be identified where the user will have both read and write capabilities but which will meet HIPAA standards for storing patient health information.

5. If this is the first time Visual DMS has been installed, the following steps must be completed to ensure that users have access to the application:

   a. For each user of Visual DMS, assign option BDMGRPC as a secondary menu option with a synonym of **BDMG**.
b. For each user of Visual DMS, assign BMXRPC as a secondary menu option with a synonym of BMX.

c. Identify the server for the RPMS application for the Diabetes Management System.

**Note:** The version of the Visual DMS client must match the patch version of the Diabetes Management System in order to function correctly.

d. Select a port that has been configured in BMX and assign that port when setting up the connection. Be sure that the BMX Monitors are running or Visual DMS will not launch.

e. Test the connection and if it is OK, save the connection.

f. Double click the Visual DMS desktop icon to display the correct p9.0 of the Visual DMS client. Figure 10-4.

![Visual Diabetes 2.0 patch 9](image)

Figure 10-4: Visual DMS v2.0 p9

g. A logon dialog similar to Figure 10-5 is displayed.
h. Log on using established RPMS/EHR user Access and Verify Codes. After logging on to Visual DMS, the user may be prompted to select a facility and Register.

i. Click the **About** toolbar option to display the client version currently installed on the workstation. In order to successfully use p9 which includes the 2016 Diabetes Audit, the version should be 2.0.9.4 (Figure 10-6).

**Figure 10-6: Version 2.09.4 of Visual DMS**

**Note:** Full instructions are provided in the installation guide for the Diabetes Management System v2.0, released in 2006. ([https://www.ihs.gov/RPMS/PackageDocs/BDM/bdm_020i.pdf](https://www.ihs.gov/RPMS/PackageDocs/BDM/bdm_020i.pdf)).
10.2 Changes

The following changes have been implemented with Visual DMS in DMS p9. Only these changes are reviewed in this manual. Refer to the *Visual DMS User Manual* (bdm_0200) for full documentation on how to use this application.

- The **SDPI Key Measures Report (2016)** has been added to the Diabetes 2016 QA Audit as an output option (Section 10.2.1).
- The **View/Print any DM Audit Taxonomy** report has been added to the 2016 Diabetes Program Audit Menu (Section 10.2.2).
- The **View a SNOMED List used by the DM Audit** report has been added to the 2016 Diabetes Program Audit Menu (Section 10.2.3).

10.2.1 Visual DMS – SDPI Key Measures Report 2016

The **SDPI Key Measures Report (2016)** has been added to the Diabetes Management System as an Output option under the 2016 Diabetes Program Audit. To run this report:

1. Expand the **Diabetes QA Audit** tree (Figure 10-7).

![Figure 10-7: Diabetes QA Audit tree](image)

2. Expand the **2016 Diabetes Program Audit** tree (Figure 10-8).

![Figure 10-8: 2016 Diabetes Program Audit tree](image)
3. Select **2016 Diabetes Program Audit**. A dialog (Figure 10-9) is displayed that identifies taxonomies missing members or laboratory test taxonomies that may be improperly populated with panel tests. In some cases, this is an informational window only as specific drugs might not be available or prescribed at a given facility.

![Figure 10-9: Sample of a Taxonomy check display](image)

4. Click **OK** to access the **DM Audit** dialog (Figure 10-10).

![Figure 10-10: DM Audit dialog](image)
5. At the **Register Name** field, select **Register to Audit** from the list.

6. At the **Audit Date** field, select a date from the calendar associated with the field. All data in the year preceding this date will be reviewed. For the 2016 Annual Audit, select **December 31, 2015**. The default is the current date. A date in the future can be used as the Audit date to identify patients who might have specific care needs before the official Annual Audit date.

7. At the **Type of Audit** field, select the type of audit from the list:
   - **P-Individual Patients**.
   - **S-Search Template of Patients**. If used, the next active field becomes **Search Template**. Select a **Search Template** from the list (Figure 10-11).
   - **C-Members of a CMS Register**. If used, the next active field becomes **Register**. Select a **Register** from the list (Figure 10-12).

8. The **SDPI Key Measures Report** can be further narrowed down by selecting a community or a Primary Care Provider. If additional sorting criteria are desired, at the **Select a Community** field, select **Yes** or **No**. This can limit the audit to patients who live in a particular community. If **Yes** is chosen:
   - The **Select Community** button becomes active. Click **Select Community** to display the **Community** search/select dialog (Figure 10-13) and search for and select a community (only one community can be used).

**Note:** The SDPI Key Measures Report is typically run for the entire Register or a Search Template of patients.
b. At the **Begin String** field, type the beginning string of the name of the community (at least 3 characters).

c. At the **End String** field, type the ending string of the name of the community (optional).

d. Click **Search** to initiate the search for the community name.

e. The retrieved records display in the **Communities** list, showing the names of the communities and their associated states. Select one to be used for the report.

9. To run the **SDPI Key Measures Report by Primary Care Provider**, at the **Select a PCP** field, select **Yes**. If **Yes** is chosen:

   a. The **Provider** search/select dialog (Figure 10-14) is displayed.
b. At the **Begin String** field, type the beginning string of the last name of the provider (at least 3 characters).

c. At the **End String** field, type the ending string of the last name of the provider (optional).

d. Click **Search** to initial the search for the provider.

e. The **Provider** list contains the retrieved records, showing the names of the providers.

f. Select a provider name to be used as the primary provider. This name will appear in the lower left corner of the DM Audit window.

10. To run the **SDPI Key Measures Report** for a random sample of patients, select **Yes** at the **Random Sample?** field. When prompted, enter the number of patients to use as a random sample.
11. At the **Patient Status** field, select the patient status to be used on the **SDPI Key Measures Report**. Typically only patients with an active status would be used for this report.

12. At the **Type of Report** field, select the type of report for the audit:
   - 1-Print Individual Reports
   - 2-Create Audit Export File
   - 3-Cumulative Audit Only
   - 4-Both Individual and Cumulative Audit
   - 5-SDPI Key Measures Report 2015
   - 6-SDPI Key Measures Report 2016

13. At the **Demo Patients** field, select **E-Exclude DEMO Patients**.

14. At the **Patient Type** field, select **1-Indian/Alaska Native**.

Figure 10-15 shows the typical selections made on the **DM Audit** dialog to run the **SDPI Key Measures Report 2016**.

15. Click **Queue** to run the report.
16. Once the report has been queued to run, click **Report Status** on the toolbar of the main window to review the progress of the report.

17. To view the report, select the COMPLETED report name and it will display in a Microsoft Word document (it can be saved or printed). When review of the report is complete, close the Word document.

Figure 10-16 shows a sample SDPI Key Measures Report.

10.2.2 View/Print Any DM Taxonomy

The option, View/Print Any DM Taxonomy, has been added to Visual DMS under the 2016 Diabetes Program Audit list. It may be used to review any taxonomy, CPT Code, Diagnoses Codes, LOINC Codes, Medication, or Laboratory Test that is used by the 2016 Diabetes Audit.

1. Expand the Diabetes QA Audit tree (Figure 10-17).

   ![Diabetes QA Audit tree](image)

   Figure 10-17: Diabetes QA Audit tree

2. Expand the 2016 Diabetes Program Audit tree (Figure 10-18).
3. Select **View/Print Any DM Taxonomy**. The **Taxonomies** dialog (Figure 10-19) is displayed.

![Figure 10-19: Sample of Selected Taxonomy to Display](image)

4. Select an item from the **Taxonomies** field.

5. Click **Print**. The taxonomy and its contents will display in a Microsoft Word document (Figure 10-20) that may be saved or printed.

![Listing of the BGP HGBA1C LOINC CODES taxonomy](image)

**10.2.3 View a SNOMED List used by the DM Audit**

Any Diagnosis Codes used in the 2016 Diabetes Audit that may be referenced by SNOMED Codes may be displayed using this option.

1. Expand the **Diabetes QA Audit** tree (Figure 10-21).
2. Expand the **2016 Diabetes Program Audit** tree (Figure 10-22).

3. Select **View a SNOMED List Used by the DM Audit**. The **SNOMED Lists** dialog (Figure 10-23) is displayed.

4. Select an item from the **SNOMED Lists** field.

5. Click **Print**. The SNOMED List will display in a Microsoft Word document that may be saved or printed.
Appendix A: 2016 Diabetes Audit Logic

Note: Audit Logic utilizes a number of taxonomies for Diagnosis codes, CPT codes, LOINC codes, SNOMED codes, and Medications that are used by other national RPMS programs. The contents of those taxonomies may be reviewed by using the report option, VTAX View/Print Any DM Audit Taxonomy, found in the Reports menu of the Diabetes Management System. The contents of site-populated taxonomies may be viewed or printed using the menu option TU16 Update/Review Taxonomies for 2016 DM Audit under the DM16 menu option of the Diabetes Audit menu.

DM AUDIT LOGIC DESCRIPTIONS

AUDIT DATE
This is the ending date of the audit period. The user supplies this date. It is used as the ending date to calculate the time range when looking for values. For example, if the audit date is December 31, 2015 then data is examined during the year prior to this audit date (January 1, 2015 through December 31, 2015).

FACILITY NAME
This is the name of the facility at which the audit is being run. It is the division or facility to which the user logged in. (The DUZ(2) variable is used.)

REVIEWER INITIALS
Initials of the person running the audit. A maximum of 3 initials may be used. This information is taken from the File 200 (New Person) entry for the user.

STATE OF RESIDENCE
This is the state in which the patient resides at the time the audit was done. This is captured from the mailing address.

CHART NUMBER
Health record number of the patient at the facility at which the audit is run.
Note: This data item is not exported to the Web Audit.

DATE OF BIRTH
The patient’s Date of Birth. Obtained from data entered through patient registration.

For the Web Audit export, only the month and year are exported. The age of the patient is also exported.

SEX
The gender of the patient. Obtained from data entered through patient registration.

PRIMARY CARE PROVIDER
The name of the primary care (designated) provider documented in RPMS.
Diabetes Management System (BDM) Version 2.0 Patch 9

Addendum to User Manual 2016 Diabetes Audit Logic
January 2016

95

Taken from field .14 of the patient file.

Note: This item is not included in the Audit Export (Data) File.

DATE OF DIABETES DIAGNOSIS
The diabetes onset date. This date is used in the calculation of the duration of diabetes. Three different dates are displayed to the user:

- The date of onset from the Diabetes Register.
- The earliest date of onset from all diabetes related problems on the problem list. The problem list is scanned for all problems in the ICD diagnosis code ranges defined in the SURVEILLANCE DIABETES taxonomy.
- The first recorded diagnosis (POV) of diabetes in PCC. ICD codes: Taxonomy SURVEILLANCE DIABETES.

Cumulative Audit: When calculating the duration of diabetes, the earliest of the date of onset from the diabetes register or the problem list date of onset is used. Duration of diabetes is calculated from that date to the date of the audit. If neither the date of onset in the register nor the date of onset in the problem list is recorded, the duration of diabetes is not calculated. The first diagnosis date from POV is not used.

Audit Export (Data) File: The earliest date found from the Diabetes register or the problem list is exported. Format: MM/DD/YYYY

DM TYPE
The computer audit uses the following logic in determining the type of diabetes: (once a 'hit' is made, no further processing done)
1. If the diagnosis documented in the Diabetes Register is NIDDM the type is assumed to be Type 2.
2. If the diagnosis documented in the Diabetes Register is "TYPE II" the type is assumed to be Type 2.
3. If the diagnosis documented in the Diabetes Register contains a '2' the type is assumed to be Type 2.
4. If the diagnosis documented in the Diabetes Register contains IDDM the type is assumed to be type 1.
5. If the diagnosis documented in the Diabetes Register is ?Type I? the type is assumed to be Type 1.
6. If the diagnosis documented in the Diabetes Register contains a '1' the type is assumed to be Type 1.
7. If no diagnosis is documented in the Diabetes Register, or it does not contain any of the above strings the problem list is then scanned. If any diabetes diagnosis on the problem list [SURVEILLANCE DIABETES] taxonomy is also in the DM AUDIT TYPE II DXS taxonomy then the type is assumed to be type 2.
8. If any diabetes diagnosis on the problem list is also in the DM AUDIT TYPE I DXS taxonomy then the type is assumed to be Type 1.
9. If no diagnosis exists on the problem list or in the diabetes register, then the last PCC purpose of visit related to diabetes is reviewed. If the diagnosis is contained in the DM AUDIT TYPE II DXS taxonomy the type is assumed to be Type II, if it is contained in the DM AUDIT TYPE I DXS taxonomy it is assumed to be Type 1.
10. If type is not determined by any of the above, type is assumed to be Type 2 for the Audit (Data) Export File and Cumulative Audit. For the Individual Audit and Diabetes Health Summary, "Not Documented" is displayed.

TOBACCO - SCREENED DURING AUDIT PERIOD
If any of the following items is documented during the audit period then a value of 1 - Yes is assigned. Otherwise, a value of 2 - No is assigned.
- Health Factor in the TOBACCO (SMOKING) Category.
- Health Factor in the TOBACCO (SMOKELESS - CHEWING/DIP) Category.
- The PCC Problem list and purpose of visits are scanned for any diagnosis contained in the BGP TOBACCO DXS taxonomy.
- Any visit with Dental ADA code 1320 documented.
- Any visit with the following CPT codes documented: BGP TOBACCO SCREEN CPTS taxonomy.

**TOBACCO USE**

The last documented of the following items is found:

1. Health Factors in the categories TOBACCO (SMOKING) and TOBACCO (SMOKELESS - CHEWING/DIP) that relate to the patient's tobacco use status. As of the DM Audit 2016 these are the health factors available:
   (the ones with one asterisk (*) indicate a current user, those with two asterisks (**) are non-tobacco users, the others are put in the "Not Documented" category):
   *CURRENT SMOKELESS TOBACCO (SMOKELESS - CHEWING/DIP)
   **PREVIOUS (FORMER) SMOKELESS TOBACCO (SMOKELESS - CHEWING/DIP)
   *CESSATION-SMOKELESS TOBACCO (SMOKELESS - CHEWING/DIP)
   SMOKELESS TOBACCO, STATUS UNKNOWN TOBACCO (SMOKELESS - CHEWING/DIP)
   **NEVER USED SMOKELESS TOBACCO TOBACCO (SMOKELESS - CHEWING/DIP)
   **NON-TOBACCO USER TOBACCO (SMOKING)
   *CURRENT SMOKER, STATUS UNKNOWN TOBACCO (SMOKING)
   **PREVIOUS (FORMER) SMOKER TOBACCO (SMOKING)
   *CESSATION-SMOKER TOBACCO (SMOKING)
   *CURRENT SMOKER, EVERY DAY TOBACCO (SMOKING)
   *CURRENT SMOKER, SOME DAY TOBACCO (SMOKING)
   **NEVER SMOKED TOBACCO (SMOKING)
   SMOKING STATUS UNKNOWN TOBACCO (SMOKING)
   *HEAVY TOBACCO SMOKER TOBACCO (SMOKING)
   *LIGHT TOBACCO SMOKER TOBACCO (SMOKING)

If a factor is found in each of these categories, the one that indicates a tobacco user is used. If one is found in just one category it is used. For example, patient has LIGHT TOBACCO SMOKER and NEVER USED SMOKELESS TOBACCO documented - the LIGHT TOBACCO USER is used. If the patient has NEVER SMOKED and CURRENT SMOKELESS documented, CURRENT SMOKELESS is used.

2. Diagnoses contained in the BGP TOBACCO DXS taxonomy. Both the V POVs and Problem List are checked. The latest documented diagnosis that is contained in the taxonomy is used. Diagnoses that indicate a tobacco user: diagnoses codes in the BGP TOBACCO USER DXS taxonomy, all others are considered non-tobacco user.

3. Dental ADA code 1320 - TOBACCO USE INTERVENTION TO PREVENT DISEASE. If this code is documented the patient is considered a tobacco user.

4. A CPT code documented that is in the BGP TOBACCO SCREEN CPTS taxonomy. If the code found is in the BGP TOBACCO USER CPTS taxonomy the patient is considered a tobacco user, all others are considered a non-tobacco user.

If the patient is a user then "1 - Current user" is assigned.
If the patient is not tobacco user then "2 - Not a current user" is assigned.
Otherwise "3 - Not documented" is assigned.

**TOBACCO REFERRED FOR CESSATION COUNSELING**

If the tobacco use status is "1 - Current user" then counseling documented in the past year is searched for.
Counseling is defined as any of the following:
1. A health factor containing the word CESSATION documented in the past year. (CESSATION-SMOKELESS, CESSATION-SMOKER) Taxonomy used: DM AUDIT CESSATION HLTH FACTOR.
2. A visit to clinic 94 - TOBACCO CESSATION CLINIC
3. A patient education topic that meets the following criteria:
   a. Begins with TO- (e.g. TO-Q)
   b. Ends in -TO (e.g. CAD-TO)
   c. Begins with any Tobacco User diagnosis (taxonomy is BGP TOBACCO USER DXS) (e.g. 305.1-L)
   d. Begins with any Tobacco User CPT code (e.g. 99407-L)
   e. Begins with a SNOMED code from the TOBACCO CESSATION PATIENT ED SNOMED code list. To see a list of these codes use option VSML View a SNOMED List Used by the DM AUDIT which can be found on the DM16 menu.
4. Any of the following CPT codes documented. These indicate tobacco use counseling: CPT code D1320, 99406, 99407, G0375 (old code), G0376 (old code), 4000F, 4001F, G8402 or G8453.
5. Dental ADA code 1320.
The latest documented of the above 5 data elements is displayed along with the date.
If no counseling is found then the system will look for a smoking aid prescribed:
Any prescription for a medication in the site-populated BGP CMS SMOKING CESSATION MEDS taxonomy that does not have a comment of RETURNED TO STOCK.
A prescription for any medication with name containing "NICOTINE PATCH", "NICOTINE POLACRILEX", "NICOTINE INHALER", or "NICOTINE NASALSPRAY" that does not have a comment of RETURNED TO STOCK.
If any the above is found, then a value of 1 - Yes is assigned. Otherwise, a value of 2 - No is assigned.

HEIGHT
The last recorded height value taken on or before the ending date of the audit.
Total height in inches is displayed for the Individual Audit and Diabetes Health Summary.
AUDIT Export (Data) File: The last recorded height prior to the audit date is passed to the export record - either in feet and inches or just inches. The inches are rounded to 2 decimal digits. For example, 1.25 inches.

WEIGHT
The last recorded Weight value taken during the audit period.
AUDIT Export (Data) File: The last recorded weight during the audit period is passed to the export file. The weight is truncated to the nearest whole pound.

BMI
BMI is calculated in the following way:
BMI = (weight/height*height) x 703.
weight=the last weight (in lbs) in the one year prior to the audit date
height=the last height (in inches) recorded any time before the audit date
Cumulative Audit: BMI is used and percentages of patients in the specified BMI categories are calculated. If the patient did not have a height or weight recorded as described above they fall into the "Height or weight missing" category.

Note: This item is not included in the Audit Export (Data) File.

HYPERTENSION DOCUMENTED
If hypertension is on the problem list or the patient has had at least 3 visits with a diagnosis of hypertension ever, then it is assumed that they have hypertension and a value of 1 - Yes is assigned. Otherwise, a value of 2 - No is assigned. Taxonomy used: SURVEILLANCE HYPERTENSION. SNOMED List: HYPERTENSION DIAGNOSES. To see a list of these codes use option VSML View a SNOMED List Used by the DM AUDIT which can be found on the DM16 menu.

**BLOOD PRESSURES (LAST 2 or 3)**
The most recent recorded blood pressure values (up to three on different days) on non-ER clinic visits in the year prior to the audit date are obtained. If more than one blood pressure is recorded on any one day, the latest one is used.

If two or three blood pressures are available, then the mean is calculated and percentages of patients in the specified blood pressure categories are calculated

AUDIT Export file: The blood pressure values obtained above are passed on to the export record, mean blood pressure is not.

**FOOT EXAM (COMPREHENSIVE)**
The logic used in determining if a comprehensive foot exam has been done is as follows:
1. A documented DIABETIC FOOT EXAM, COMPLETE (CODE 28) is searched for in the year prior to the audit date. This is recorded in V Exam. If found, no other processing is done, an exam is assumed to have been done.
2. CPT codes 2028F and G9226 in V CPT [Taxonomy: DM AUDIT CPT FOOT EXAM]
3. A visit on which a podiatrist (provider class codes 33=PODIATRIST, 84=PEDIORTHIST or 25=CONTRACT PODIATRIST) that is not a DNKA visit is searched for in the year prior to the audit date. If found, it is assumed the exam was done and no further processing is done.
4. A visit to clinic 65=PODIATRY or B7=Diabetic Foot clinic that is not a DNKA is searched for in the year prior to the audit date. If found, no other processing is done.

If any of the above is found, a value of 1 - Yes is assigned. If none of the above are found the value is 2 - No.

**EYE EXAM (dilated or retinal imaging)**
The logic used in determining if a diabetic eye exam has been done is as follows:
1. The system looks for the last documented Diabetic Eye Exam in the year prior to the audit date. Diabetic Eye Exam is defined as:
   a. EXAM 03 - Diabetic Eye Exam
   c. ICD Procedure in [DM AUDIT EYE EXAM PROCS] taxonomy.
2. If one of the above is found, the value 1 - Yes is assigned and no further processing is done.
3. If none of the above is found, then all PCC Visits in the year prior to the end of the audit are scanned for a non-DNKA, non-Refraction visit to an Optometrist or Ophthalmologist (24, 79, 08) or an Optometry or Ophthalmology Clinic (17, 18, 64 or A2). If found, then the value 1 - Yes is assigned and an indication of what was found is displayed. Refraction is defined as a POV on the visit of: [DM AUDIT REFRACTION DXS]. DNKA is defined as any visit with a primary purpose of visit with a provider narrative containing the following phrases: DNKA, DID NOT KEEP APPOINTMENT, DID NOT KEEP APPT.

6. If none of the above are found, the value 2 - No is assigned.

DENTAL EXAM

The logic used in determining if a dental exam has been done is as follows:
1. A documented DENTAL EXAM (CODE 30) is searched for in the year prior to the audit date. If found, the value 1 - Yes is assigned and no other processing is done.
2. A visit to clinic 56 - DENTAL clinic that is not a DNKA is searched for in the year prior to the audit date. If found, and there is any ADA code other than 9991, then it is assumed the exam was done, the value 1 - Yes is assigned and no other processing is done.
3. A visit on which a dentist (provider class code 52 -DENTIST) that is not a DNKA visit is searched for in the year prior to the audit date. If found, and there is any ADA code other than 9991, then it is assumed the exam was done, the value 1 - Yes is assigned and no further processing is done.
4. A Visit on which a CPT code from the DM AUDIT DENTAL EXAM CPTS taxonomy was recorded.

If none of the above are found, the value 2 - No is assigned.

NUTRITION INSTRUCTION

The values in the audit are:
1 RD
2 Other
3 Both RD & Other
4 None

All visits in the year prior to the audit date are examined. Chart review visits are skipped (Chart review is defined as service category of C or clinic code of 52).
- If the primary provider on any visit is a DIETITIAN or NUTRITIONIST (codes 29, 07 or 34) then RD is assigned.
- If the visit does not have one of the above providers but has a Diagnosis of [BGP DIETARY SURVEILLANCE DXS] then Other is assigned.
- If the visit has a CPT documented of 97802, 97803, or 97804 then RD is assigned.
- If the visit contains any of the following education topics
  Topic in the DM AUDIT DIET EDUC TOPICS taxonomy or any
  Topic ending in -N
  Topic ending in -DT
  Topic ending in -MNT
  Topic beginning with MNT-
  Topic beginning with DNCN-
  The V PAT ED entry is examined and if the provider documented in that entry is a Dietitian or Nutritionist the RD is assigned if the provider is blank or not a dietitian/nutritionist then Other is assigned.

At this point:
- if RD is assigned and Other is not then the value assigned is 1 - RD.
- if RD and Other is assigned then the value assigned is 3 - RD & Other.
- if Other is assigned and RD is not then the value assigned is 2 - Other.
Processing stops if a value is assigned. If none of the above is documented, the value 4 - None is assigned.

**PHYSICAL ACTIVITY INSTRUCTION**

All visits in the year prior to the audit date are examined. If there is a visit on which a patient education topic in the DM AUDIT EXERCISE EDUC TOPICS taxonomy, or any topic ending in "-EX" is documented then a 1 - Yes value is assigned. No further processing is done.

All visits in the year prior to the audit date are examined for a POV of V65.41 (there are no ICD10 codes) and if one is found a 1 - Yes is assigned.

If none of the above is documented, the value is 2 - No

**DM EDUCATION (OTHER)**

All education topics documented in the year prior to the audit date are examined. If any topic meets the following criteria then the value assigned is 1 - Yes:
- topic does not end in -EX, -N, -DT or -MNT
- topic does not begin with MNT-
- topic is a member of the DM AUDIT EDUC TOPICS taxonomy OR the topic begins with one of the following:
  - DM- (e.g. DM-L)
  - DMC- (e.g. DMC-L)
  - an ICD Diagnosis code that is a member of the SURVEILLANCE DIABETES taxonomy (e.g. 250.00-L, E10.51-L)
  - a Diabetes SNOMED code (e.g. 46635009-L)

If none of the above is documented, the value is 2 - No

**DEPRESSION AN ACTIVE PROBLEM**

The patient's problem lists in both PCC and the Behavioral Health module are reviewed for any problem with a code that is contained in the DM AUDIT DEPRESSIVE DISORDERS taxonomy; or for the following Behavioral Health problem codes: 14, 15.

If no problem is found on the problem list then the PCC and BH systems are reviewed for at least 2 diagnoses (POV's) of the codes listed above in the year prior to the audit date.

If either a problem is found on the problem list or 2 POV's are found then the value assigned is 1 - Yes. If not, then a value of 2 - No is assigned.

**DEPRESSION SCREENING**

This item is only reviewed if depression was not found on the problem list and the patient is not currently being seen for depression. (See item DEPRESSION AS AN ACTIVE PROBLEM)

The PCC and Behavioral health databases are reviewed for any of the following documented in the past year:
- V Exam 36 or Behavioral Health Module Depression Screening.
- Diagnosis - V POV V79.0 (NOTE: there are no ICD10 codes used).
- Education Topics - V EDUCATION or Behavioral Health Module DEP-SCR.
- V Measurement PHQ2, PHQ9, PHQT.
- Behavioral Health Module Diagnosis (POV) of 14.1.
- Diagnosis in DM AUDIT DEPRESSIVE DISORDERS taxonomy in V POV.
- Diagnosis in DM AUDIT DEPRESSIVE DISORDERS taxonomy in BH.
- Problem Code of 14 or 15 in BH.
If any of the above is found then a value of 1 - Yes is assigned. If not, then a value of 2 - No is assigned.

**DM THERAPY**

All Visits in the 6 months prior to the audit date are reviewed. If any medication in the taxonomy specified is found, then an 'X' is placed by the therapy name and a value of 1 - Yes is entered in the Audit Export file. If no medications are found then the Diet & Exercise Alone item is marked with an 'X' and a value of 1 - Yes is entered in the Audit Export file for this item while a value of 2 - No is entered for all other therapy items.

**ACE INHIBITOR OR ARB**

1. If any drug in the DM AUDIT ACE INHIBITORS taxonomy or any drug with a VA Drug Class of CV800 or CV805 has been prescribed in the 6 months prior to the audit date a 1 - Yes is assigned.
2. If no drugs are found, a 2 - No is assigned.

**ASPIRIN/ANTIPLATELET/ANTICOAGULANT THERAPY**

All medications in the past year are reviewed. If any of them are in the DM AUDIT ASPIRIN DRUGS or DM AUDIT ANTIPLT/ANTICOAG RX taxonomies then a value of 1 - Yes is assigned, no further processing is done.

The Non-VA meds component in the pharmacy patient file is reviewed for any drug in the above mentioned taxonomies or an orderable item whose first 7 characters is "ASPIRIN" and whose 8th character is not a "/". If one is found then a value of 1 - Yes is assigned and no further processing is done.

If no relevant drugs are found then a 2 - No is assigned.

**STATIN**

Definition:
Any V Medication for any drug in the DM AUDIT STATIN DRUGS or BGP PQA STATIN MEDS taxonomy.

Medications are looked for in the past 6 months. Allergies documented are looked for any time before the end of the audit period.

Statin Allergy defined as:
Adverse drug reaction documented statin allergy defined as any of the following: 1) ALT and/or AST > 3x the Upper Limit of Normal (ULN) (i.e. Reference High) on 2 or more consecutive visits during the Audit Period; 2) Creatine Kinase (CK) levels > 10x ULN or CK > 10,000 IU/L during the Report Period; 3) Myopathy/Myalgia, defined as any of the following during the Report Period: POV ICD-9: 359.0-359.9, 729.1, 710.5, 074.1; ICD-10: G71.14, G71.19, G72.0, G72.2, G72.89, G72.9, M35.8, M60.80-M60.9, M79.1; 4) any of the following occurring anytime through the end of the Report Period: A) POV ICD-9: 995.0-995.3 AND E942.9; B) "Statin" or "Statins" entry in ART (Patient Allergies File); or C) "Statin" or "Statins" contained within Problem List or in Provider Narrative field for any POV ICD-9: 995.0-995.3, V14.8; ICD-10: Z88.8.

Test Definitions:

ALT: Site-populated taxonomy DM AUDIT ALT TAX or the BGP ALT LOINC taxonomy.

AST: Site-populated taxonomy DM AUDIT AST TAX or the BGP AST LOINC taxonomy.

Creatine Kinase: Site-populated taxonomy BGP CREATINE KINASE TAX or the BGP CREATINE KINASE LOINC taxonomy.

Statin Intolerance/Contraindication defined as:

Contraindications to Statins defined as any of the following: 1) Pregnancy (see definition below); 2) Breastfeeding, defined as POV ICD-9: V24.1; ICD-10: Z39.1 or breastfeeding patient education codes BF-BC, BF-BP, BF-CS, BF-EQ, BF-FU, BF-HC, BF-ON, BF-M, BF-MK, or BF-N during the Report Period; 3) Acute Alcoholic Hepatitis, defined as POV ICD-9: 571.1; ICD-10: K70.10, K70.11 during the Report Period; or 4) NMI (not medically indicated) refusal for any statin at least once during the Report Period.

Pregnancy definition: At least two visits during the Audit Period with POV or Problem diagnosis ICD-9: 640.*, 641.*, 642.*, 643.*, 644.*, 645.*, 646.*, 647.*, 648.*, 649.*, 651.*, 652.*, 653.*, 654.*, 655.*, 656.*, 657.*, 658.*, 659.*, 660.*, 661.*, 662.*, 663.*, 664.*, 665.*, 666.*, 667.*, 668.*, 669.*, 671.*, 673.*, 674.*, 675.*, 676.*, 678.*, 679.*, V22.0-V23.9, V28.81, V28.82, V28.89, V72.42, V89.01-V89.09; ICD-10: (see logic manual for codes), where the primary provider is not a CHR (Provider code 53). Pharmacy-only visits (clinic code 39) will not count toward these two visits. If the patient has more than two pregnancy-related visits during the Report Period, CRS will use the first two visits in the Report Period. The patient must not have a documented miscarriage or abortion occurring after the second pregnancy-related visit. Miscarriage definition: 1) POV ICD-9: 630, 631, 632, 633*, 634*; ICD-10: 003.9; 2) CPT 59812, 59820, 59821, 59830. Abortion definition: 1) POV ICD-9: 635*, 636*, 637*; ICD-10: 000.*-003.89, 004.*, 233.2; 2) CPT 59100, 59120, 59130, 59136, 59150, 59151, 59850, 59851, 59852, 59855, 59856, 59857, S2260-S2267; 3) Procedure ICD-9: 69.01, 69.51, 74.91, 96.49; ICD-10: 0WHR73Z, 0WHR7YZ, 10A0***, 3E1K78Z, 3E1K88Z.

**TB TEST DONE**

The type of TB Test done is determined in the following way:

1. If the patient has a TB health factor recorded, TB on the problem list or any diagnoses of TB documented in the PCC then the test type is assigned as 1 - Skin Test (PPD), no further processing is done.
2. All recorded PPD entries and TB lab tests using the DM AUDIT TB LAB TESTS TAX prior to the audit date are gathered. If at least one is found the latest one is used, if it is a Skin test then 1 - Skin test (PPD) is assigned, if it is a lab test then 2 - Blood Test is assigned.
3. If there are none found then the value is **3 - UNKNOWN/NOT OFFERED**.

**TB TEST RESULT**

If a TB test was done, the test result is determined in the following way:

1. If the patient has a TB health factor recorded, TB on the problem list or any diagnoses of TB documented in the PCC then the test result is assigned as **1 - Positive**, no further processing is done. Taxonomy Used is **DM AUDIT TUBERCULOSIS DXS** taxonomy.

2. All recorded PPD entries and TB lab tests using the **DM AUDIT TB LAB TESTS TAX** prior to the audit date are gathered. If at least one is found the latest one is used, if it is a Skin test and the reading or result is Positive (reading >9) then it is assigned as **1 - Positive**, if reading or result of last PPD is negative, then the values is **2 - Negative**, if the test type is a blood test then the value of the test is examined, if it is Positive then **1 - Positive** is recorded, if it is negative then **2 - Negative** is assigned. If the results are null the value **3 - Unknown/Not offered** is assigned.

3. If there are none found then the value assigned is **3 - Unknown/not offered**.

**TB RESULT POSITIVE, INH TX COMPLETE**

If the value of the TB Test result is **POSITIVE** then the last TB health factor is looked at for determining TB Treatment status. The last recorded TB Health factor is displayed. The TB Health factors are: **TB - TX COMPLETE** **TB - TX INCOMPLETE** **TB - TX UNKNOWN** **TB - TX UNTREATED**, **TB - IN PROGRESS**. The following value is assigned based on the last recorded health factor:

- **TX COMPLETE**: 1 - Yes
- **TX INCOMPLETE**: 2 - No
- **TX UNTREATED**: 2 - No
- **TX IN PROGRESS**: 2 - No
- **TX UNKNOWN**: 3 - Unknown

**TB RESULT NEGATIVE, TEST DATE**

If the value of TB test result is **NEGATIVE** then the date of the last TB test is displayed.

**CVD**

CVD diagnosis (using **DM AUDIT CVD DIAGNOSES** taxonomy) is searched for on the patient’s problem list. If a diagnosis is found, a **1 - Yes** is assigned.

If no problem is found on the problem list, then the V POV file is searched for the following, if found, a **1 - Yes** is assigned along with the visit date on which the item was found:

- One diagnosis ever of any diagnosis in the BGP CABG DXS taxonomy. The codes are:
  - 295.1 (ICD-10) Presence of aortocoronary bypass graft
  - V45.81 (ICD-9) AORTOCORONARY BYPASS

- One diagnosis ever of any code in the BGP PCI DXS taxonomy. Codes are:
  - V45.82 (ICD-9) STATUS-POST PTCA
  - 295.5 (ICD-10) Presence of coronary angioplasty implant and graft
  - 298.61 (ICD-10) Coronary angioplasty status

- Two diagnoses ever of any code in the **DM AUDIT CVD DIAGNOSES** taxonomy.

- One procedure ever documented of any code in the BGP PCI CM PROCS taxonomy.

- One procedure ever documented of any code in the BGP CABG PROCS taxonomy.
- One CPT procedure ever documented of any code in the BGP PCI CM CPTS taxonomy.

- One CPT procedure ever documented of any code in the BGP CABG CPTS taxonomy.

If none of the above are found, a value of 2 - No is assigned.

**INFLUENZA VACCINE DURING AUDIT PERIOD**
The patient's data is scanned for an influenza vaccine in the 12 months prior to the audit date. Influenza vaccine is defined as:
- Immunization CVX codes: See BGP FLU IZ CVX CODES taxonomy
- CPT codes: BGP CPT FLU
- Diagnosis codes: BGP FLU IZ DXS (there are no ICD10 codes)

If any of the above is found, a value of 1 - Yes is assigned.

If no documented immunization is found, a documented refusal in the past 12 months is searched for. If one is found, then a value of 3 - Refused is assigned.

If neither of the above are found, a value of 2 - No is assigned.

**PNEUMOCOCCAL VACCINE EVER**
Data is scanned for pneumococcal vaccine any time prior to the audit date. A pneumococcal vaccine is defined as:
- Immunization CVX codes: 33, 100, 109, 133, 152
- Diagnoses: V03.82 (there are no ICD10 codes)
- CPT codes: BGP PNEUMO IZ CPTS taxonomy (90669, 90670, 90732, G0009, G8115, G9279)

If any of the above is found, a value of 1 - Yes is assigned.

If none is found, the refusal file is checked for a documented refusal of this vaccination. Refusals documented in both the PCC and the Immunization register are reviewed. If one is found, then a value of 3 - Refused is assigned.

If neither of the above is found, a value of 2 - No is assigned.

**Td or Tdap IN PAST 10 YEARS**
Immunizations are scanned for any tetanus vaccine in the 10 years prior to the audit date. Logic used to find a TD vaccine:

CPT Codes: APCH TD CPT

LOW VALUE: 90698 HIGH VALUE: 90698
LOW VALUE: 90700 HIGH VALUE: 90701
LOW VALUE: 90702 HIGH VALUE: 90702
LOW VALUE: 90703 HIGH VALUE: 90703
LOW VALUE: 90714 HIGH VALUE: 90714
LOW VALUE: 90715 HIGH VALUE: 90715
LOW VALUE: 90718 HIGH VALUE: 90718
LOW VALUE: 90720 HIGH VALUE: 90723

If any of the above is found, a value of 1 - Yes is assigned.

If none is found, the refusal file is checked for a documented refusal of this vaccination. Refusals documented in both the PCC and the Immunization register are reviewed. If one is found, then a value of 3 - Refused is assigned.
If neither of the above is found, a value of 2 - No is assigned.

Tdap EVER
Immunizations are scanned for a Tdap vaccine ever. Tdap codes are:
CVX code 115
CPT code 90715

If either of the above is found, a value of 1 - Yes is assigned.
If none is found, the refusal file is checked for a documented refusal of this vaccination. Refusals documented in both the PCC and the Immunization register are reviewed. If one is found, then a value of 3 - Refused is assigned.
If neither of the above is found, a value of 2 - No is assigned.

HEPATITIS B 3-DOSE SERIES EVER
Data is scanned for hepatitis B vaccine any time prior to the audit date.
HEP B definition:
CVX codes 8, 42, 43, 44, 45, 51, 102, 104, 110, 132, 146
CPT codes contained in the BGP HEPATITIS CPTS taxonomy: 90636, 90723, 90731, 90740, 90743, G0010, Q3021, Q3023
Vaccinations must be given at least 20 days apart. If three are found, a value of 1 - Yes is assigned.
If less than three vaccinations found, the system will look for an Immune Contraindication in the Immunization contraindications file. If it is found, a value of 4 - Immune is assigned.
The system then looks for evidence of disease: Problem List or V POV of [BGP HEP EVIDENCE] Taxonomy. If it is found, a value of 4 - Immune is assigned.
If three vaccinations are not found and immunity or evidence of disease is not found, the system searches for a refusal documented in the past year.
Refusal definitions: Immunization Package refusal or PCC refusal of the above listed CVX or CPT codes.
If none of the above are found, a value of 2 - No is assigned.

A1C
All lab tests in the V LAB file in the year prior to the audit date are found using the DM AUDIT HGB A1C TAX taxonomy and the BGP HGBA1C LOINC CODES taxonomies. Only tests that have a result are used, if the result of the V LAB is blank, contains "CANC" or contains "COMMENT" the V Lab is skipped.
Individual Audit: The date and result of test are displayed.
Cumulative Audit:
If the result contains a ">" it goes into the 11.0 or higher category.
If the result contains a "<" it goes into the <7.0 category.
At this point everything is stripped from the result value except for numbers and ".". If after stripping, what is left is something other than a number then it is put in the "Not tested or no valid result" category.
If what is left is a numerical value, it is put in the appropriate category below:
HbA1c <7.0
HbA1c 7.0-7.9
HbA1c 8.0-8.9
HbA1c 9.0-9.9
HbA1c 10.0-10.9
HbA1c 11.0 or higher
Not tested or no valid result

Audit Export (Data) File: When exported, all characters that are not a number or a "." are stripped from the result value, so if the value is <7.0 what is exported is 7.0.

SERUM CREATININE
The last lab test with a result in the year prior to the audit date that is a member of the DM AUDIT CREATININE TAX taxonomy or the BGP CREATININE LOINC CODES taxonomy is found in V LAB. All tests with a result containing "CANC" are skipped.
Specimen types are not examined so if the same creatinine test is used for serum creatinine as for urine creatinine, the audit is unable to distinguish between these values.

Result reporting:
For the individual audit, the actual value that is in V LAB is displayed.
For the cumulative audit: This item is not reported.
For the Audit Export (Data) File: All characters other than numbers and "."s are stripped from the result value and that value is truncated to a total of 4 characters with two decimal digits.

ESTIMATED GFR
For patients that are 18 or older, the last lab test in the year prior to the audit date that is a member of the BGP GPRA ESTIMATED GFR TAX or the BGP ESTIMATED GFR LOINC taxonomy is found.

For the individual audit, the actual value that is in V LAB is displayed.
If there is no estimated GFR found in V LAB but there is a creatinine value found the Estimated
For the cumulative audit:
If the first character of the value is ">" it goes into >=60 ml/min.
Otherwise, all characters other than numbers and "." are stripped from the result value. The resulting value is placed in the following categories:
>=60
30-59
15-29
<15
Not tested or no valid result
Audit Export (Data) File: All characters other than numbers or "." are stripped from the result value and that value is truncated to a total of 4 characters with 1 decimal digit.

TOTAL CHOLESTEROL
The last lab test with a result in the year prior to the audit date that is a member of the DM AUDIT CHOLESTEROL TAX taxonomy or the BGP TOTAL CHOLESTEROL LOINC taxonomy is found in V LAB.
Cumulative Audit: This result is not used.
Audit Export (Data) File: All characters other than numbers and "." are stripped from the result value and that value is then rounded to the closest whole number and truncated to a total of 3 characters with 0 decimal digits.
HDL CHOLESTEROL
The last lab test with a result in the year prior to the audit date that is a member of the DM AUDIT HDL TAX taxonomy or the BGP HDL LOINC CODES taxonomy is found in V LAB.

Cumulative Audit:
The result of the test is examined and is put into the following categories by gender. If the result is blank OR the first digit of the result is not a number, then it is put in the "Not tested or no valid result" category. For example, if the value is "cancelled", it will fall into "Not tested or no valid result".

In females
HDL <50 mg/dl
HDL >=50 mg/dl
Not tested or no valid result
In males
HDL <40 mg/dl
HDL >=40 mg/dl
Not tested or no valid result

Audit Export (Data) File:
All characters that are not numbers or "." are stripped from the result value and that value is then rounded to the closest whole number and truncated to a total of 3 characters with 0 decimal digits.

LDL CHOLESTEROL
The last lab test with a result in the year prior to the audit date that is a member of the DM AUDIT LDL CHOLESTEROL TAX taxonomy or the BGP LDL LOINC CODES taxonomy is found in V LAB. Tests with a result containing "CANC" are ignored.

Cumulative Audit:
The result of the test is examined and is put into the following categories. If the first digit of the result is not a number, then it is put in the "Not tested or no valid result" category. For example, if the value is "UNK", it will fall into "Not tested or no valid result".

LDL <100 mg/dl
LDL 100-129 mg/dl
LDL 130-189 mg/dl
LDL >=190
Not tested or no valid result

Audit Export (Data) File: All characters that are not numbers or "." are stripped from the result value and that value is then rounded to the closest whole number and truncated to a total of 3 characters with 0 decimal digits.

TRIGLYCERIDES
The last lab test with a result in the year prior to the audit date that is a member of the DM AUDIT TRIGLYCERIDE TAX taxonomy or the BGP TRIGLYCERIDE LOINC CODES taxonomy is found in V LAB. Only tests with a result are used, tests with a result containing "CANC" or "COMMENT" are also skipped.

Cumulative Audit:
The result of the test is examined and is put into the following categories. If the result is blank OR the first digit of the result is not a number then it is put in the "Not tested or no valid result" category. For example, if the value is "cancelled", it will fall into "Not tested or no valid result".
| TG <150 mg/dl |
| TG 150-999 mg/dl |
| TG >=1000 mg/dl |
| Not tested or no valid result |

**Audit Export:** All characters other than numbers and "." are stripped from the result value and that value is then rounded to the closest whole number and truncated to a total of 3 characters with 0 decimal digits.

**UACR**
The system looks for a test contained in the DM AUDIT QUANT UACR lab taxonomy or DM AUDIT A/C RATIO LOINC taxonomy, if found and the test has a valid numeric result then the patient is assigned a value of 1 - Yes for UACR Done. The result of the test is assigned to UACR value.

If the test found does not have a valid numeric result then the system will look for a urine microalbumin test on the same visit date. If found, the result of that test is evaluated. If the result contains a '<' symbol or the words "less than," the patient is assigned a 1 - Yes that a UACR was done and a value of 5 is assigned to UACR value. If the result contains a '>' symbol or contains the words "greater than" the patient is assigned a 1 - Yes that a test was done and a value of 999 is assigned to UACR value.

If neither of the above is found, then a value of 2 - No is assigned for UACR done and UACR value is left blank.

**COMBINED OUTCOMES MEASURE**
Assessed only for patients 40 years of age and older. The combined outcome measure displays a 1 - Yes on the audit if the patient had all of the following during the audit period: A1c < 8.0, statin prescribed, and mean BP <140/<90. Otherwise a value of 2 - No is assigned.

Note: This item is not included in the Audit Export (Data) File.

**e-GFR and UACR**
Assessed only for patients 18 years of age and older. For those who had both an e-GFR and a UACR test during the audit period, a value of 1 - Yes is assigned. Otherwise a value of 2 - No is assigned.

Note: This item is not included in the Audit Export (Data) File.

**COMORBIDITY**
Comorbidity is determined by how many of the following problems or conditions each of the patients has:

- Active depression
- Current tobacco use
- Severely obese (BMI 40 or higher)
- Diagnosed hypertension
- Diagnosed CVD
- CKD: eGFR<60 or UACR=>30 mg/g
Appendix B: Audit Export (Data) File Definition

The 2016 Audit Export (Data) file is a text file, using (^) as the delimiter. If a data point is missing, a space should appear between the delimiters (e.g., ^ ^).

In the Audit Export file:
- Line 1 is the variable name line, and contains the Audit variables in the order that they appear in Table B-1.
- Lines 2 through x will contain the data, with each line representing a single record.

Table B-1 lists the current variable names and a brief description of each. Table B-2 lists those variables that have been altered in the 2016 Audit Export file. There are currently 73 fields in each Audit record.
