Preface

The purpose of this document is to provide users with an overview of changes to the Diabetes Management System (DMS) introduced in Patch 11. In addition, instructions are provided for using DMS to conduct a 2018 Diabetes Audit, which is included in this patch.

**Note:** Resource and Patient Management System (RPMS) software, including the DMS, is subject to periodic updates based on the Indian Health Service (IHS) Standards of Care and Clinical Practice Recommendations for Type 2 Diabetes Mellitus (DM):

[https://www.ihs.gov/diabetes/clinician-resources/soc/](https://www.ihs.gov/diabetes/clinician-resources/soc/)
1.0 Introduction

1.1 DMS Changes

DMS v2.0 p11 includes several changes and additions, including tools for conducting the 2018 Diabetes Audit. A summary of the changes follows:

- New menu options have been added for the 2018 Diabetes Audit (Figure 1-1).

```
DM18  Run 2018 Diabetes Program Audit
TC18  Check Taxonomies for the 2018 DM Audit
TU18  Update/Review Taxonomies for the 2018 DM Audit
VTAX  View/Print Any DM Audit Taxonomy
EAUD  Run the 2018 Audit w/predefined set of Pts
VSML  View a SNOMED List Used by the DM AUDIT
PR18  Run 2018 PreDiabetes/Metabolic Syndrome Audit
PRTC  Check Taxonomies for the 2018 Pre-Diabetes Audit
PRTU  Update/Review Taxonomies for 2018 PreDiab Audit
```

Figure 1-1: 2018 Diabetes Audit

- New data elements have been added for capturing:
  - Hepatitis C diagnosis ever
  - Screening ever for Hepatitis C if the patient is born between 1945 and 1965
  - Retinopathy diagnosis ever

  The logic used in determining these new items can be found in the complete Audit Logic listing in Appendix A.

- Individual Audit Form/Audit Logic
  - Items on the individual audit form have been reordered to accommodate the new data elements and some labels changed for clarity.
  - Under Diabetes Therapy, “Diet & Exercise Alone” has been replaced with “None of the following.”
  - CPT codes 2019F and 2020F have been removed from the Eye Exam definition.
  - CPT codes S3000 and 67038 have been added to the Eye Exam definition.
− ICD procedure codes 08J0XZZ and 08J1XZZ have been removed from the Eye Exam definition.
− Education code DEP-SCR has been removed from the Depression Screening definition (this was an inactive education topic code).
− The Clinical Reporting System (CRS) Taxonomy BGP MOOD DISORDERS is now used to determine if the patient has a diagnosis of depression. The replaces the DM AUDIT DEPRESSION DIAGNOSIS taxonomy and aligns the DM Audit with CRS.
− CPT codes 1220F, 3725F and G0444 have been added to the Depression Screening logic.
− The dental exam logic has been updated to use the CRS taxonomy BGP DENTAL VISIT CPT CODES.
− The SNOMED list PXRM DIABETES is now used when checking for diabetes on the problem list.
− The SNOMED list PXRM ESSENTIAL HYPERTENSION is now used when checking for hypertension on the problem list.
− When looking for medications (Diabetes Therapy, ACE Inhibitor, Statin and Aspirin), logic has been added to look for EHR outside medications. These are medications the patient is taking that are prescribed outside your facility. These medications are considered active until a date discontinued is added through the EHR Outside Medications component.
− When searching for a prescription for aspirin/anti-platelet the system will only look back six months to be in line with all other medication searches.

• Cumulative Audit Report
  − A new section on Hepatitis C diagnosis and screening has been added.
  − A new section on Retinopathy has been added.
  − Tallies have been added to the Blood Sugar Control section for A1c < 8.0 and A1c > 9.0.
  − The tally for six co-morbid conditions has been removed.
  − The LDL categories have been changed to <100, 100-189, and >=190.
  − The Triglyceride categories have been changed to <150, 150-499, 500-999, and >=1000.

• Audit Export file
  − Hepatitis C diagnosis, Hepatitis C screening, and Retinopathy diagnosis have been added to the export file.
  − Items have been reordered to accommodate the above new items.

• Diabetes Patient Care Supplement (DPCS)
  − Hepatitis C Diagnosis, Hepatitis C screening, and Retinopathy diagnosis have been added to the DPCS.
• Other DMS Application Changes
  − Hepatitis C screening has been added to the Follow Up report for patients born between 1945–1965.

• New DATA QUALITY CHECK Report
  − This new report can be run from the **DM18 - Run 2018 Diabetes Audit** menu option in DMS or from the Visual DMS system. This report will list potential errors in the data extracted for your audit and should be run prior to uploading your 2018 Audit file into the WebAudit. Using this report, you can review the potential errors and correct the data as needed for any true errors. The list of errors that are checked for can be found in Appendix C.

1.2 Visual DMS Changes

• 2018 Diabetes Audit options have been added.
• The page-length issue in report outputs has been fixed.
• The Data Quality Check Report has been added.
• The Hepatitis C Screening has been added to the Follow Up report.
2.0 Prepare for the Audit

There are two important prerequisites when preparing for an electronic Diabetes Audit in RPMS:

- Ensure that patients to be audited are actively receiving care at the healthcare facility.
- Review and update taxonomies of medications and laboratory tests as needed.

2.1 Guidelines for Selecting Patients

The IHS Division of Diabetes Treatment and Prevention (Division of Diabetes) has provided the following guidelines for selecting patients for the 2018 Annual Diabetes Audit.

Include Patients who:

- Have a diagnosis of Type 1 or Type 2 diabetes.
- Are American Indian or Alaska Native.
- Have at least one visit to a primary care clinic during the audit period. Primary care clinics include:
  - General (01)
  - Diabetic (06)
  - Internal Medicine (13)
  - Pediatric (20)
  - Family Practice (28)
  - Chronic Disease (50)
  - Endocrinology (69)

Exclude Patients who:

- Received most of their primary care outside your facility during the audit period.
- Are currently on dialysis and received most of their primary care at the dialysis unit during the audit period.
- Have died before the end of the audit period.
- Are women who were pregnant during any part of the audit period.
- Have pre-diabetes (impaired fasting glucose [IFG] or impaired glucose tolerance [IGT] only).
- Have moved – permanently or temporarily (should be documented).
Unless the diabetes register is updated frequently, some of the patients identified as being in an Active status might not qualify to be included in the Annual Audit. Identify those patients and exclude them from the Annual Audit. The “INA List Possible Inactive Pts in the DM Register” report is available to assist with this process. Directions on how to run this report are in Section 2.2.2.

2.2 Use the Diabetes Register for the 2018 Diabetes Audit

The Diabetes Register may be used for the 2018 Audit by excluding patients who do not meet the audit criteria. Alternatively, a subset of the Diabetes register may be used, including only those patients who meet the audit criteria.

To help identify patients in the Diabetes Register who should not be included in for the audit, there are several reports available:

- Section 2.2.1 shows how to find patients in the Register who have a Register Diagnosis of IGT or Gestational Diabetes Mellitus (GDM).
- Section 2.2.2 shows how to use the report, “INA List Possible Inactive Pts in the DM Register,” to show patients with a status of Active who have not had a primary care visit during the audit period and therefore do not meet the audit criteria.
- Section 2.2.3 shows how to change the status of a patient on the Register. When patients who do not meet the definition of active with a diagnosis of Type 1 or Type 2 diabetes have been identified, their status can be changed by using the Edit Register Data option under Patient Management in the DMS. Either the traditional RPMS Patient Management option or the Patient Management in Visual DMS can be used.

Note: For the 2018 Annual Audit, the IHS Division of Diabetes requires review of the care provided during the calendar year ending December 31, 2017. Reports identifying patients with an active status should be run for the time period between 1/1/2017 and 12/31/2017.

2.2.1 Identify IHS Diabetes Register Patients with GDM or IGT

The IHS Diabetes Register allows entry of GDM and IGT as Register diagnoses. It has been recommended for a number of years that the IHS Diabetes Register include only patients with a diagnosis of Type 1 or Type 2 diabetes. Separate registries should be set up for patients with GDM and IGT.

The QMan search shown in Figure 2-1 will retrieve a list of patients in the register who have been given a Register Diagnosis. In this dialogue, a search is made for patients on the register with a Register Diagnosis of GDM. The same process can be used to find patients on the Register who have a Register Diagnosis of IGT.
Q-MAN OPTIONS -> SEARCH PCC Database (dialogue interface)

What is the subject of your search? LIVING PATIENTS // REGISTER <Enter> REGISTER

Which CMS REGISTER: IHS DIABETES <Enter>

Register being checked to update status of deceased patients

Select the Patient Status for this report
1. Active
2. Inactive
3. Transient
4. Unreviewed
5. Deceased

PATIENTS CMI*DEV
NUMBER

--------------------------------------------------------------------
PATIENT,DEMO I* 29693
Total: 1

Figure 2-2: QMan search results
Note: A patient whose name is marked with an asterisk (*) might have an alias.

2.2.2 Identify Possible Inactive Patients in the IHS Diabetes Register

The report, “INA List Possible Inactive Pts in the DM Register,” (Figure 2-4) can be especially useful at sites that have large numbers of patients whose Register status might not be accurate.

The report is contained in the RP Reports menu of the Diabetes Management System. Begin by selecting **RP** Reports . . .

Type **INA** to initiate the report for Possible Inactive Patients

Enter the name of the Register that is to be reviewed for inactive patients.

Select **A** for patients on the Register with a Register status of ACTIVE.

At the Clinic prompt, type [BGP PRIMARY CARE CLINICS]
This taxonomy contains the primary care clinics used by official GPRA reports. You may use just these six primary care clinics, or you may add additional clinics such as ENDOCRINOLOGY.

Enter the beginning and ending dates for searching for a visit to one or more of these primary care clinics. Note that the 2018 Annual Audit is for the time frame between January 1, 2018 and December 31, 2018. To be considered to be an active patient, there should be at least one documented visit to a primary care clinic during that time frame.

Choose the option to Browse the list. Note the number of pages in the report in the upper right hand corner of the screen.

Figure 2-3: Report option details

- The report may be printed by typing **PL** at the “Select Action” prompt.
- When prompted for **DEVICE**: enter the printer name or number where the report should be printed.

The sequence to generate this report follows:

RP Reports . . .

Select Reports Option: INA List Possible Inactive Pts in the DM Register

DEMO HOSPITAL
DEMO, DOROTHY

This report will list patients who are on the diabetes register who have not had a visit to a set of primary care clinics in a date range defined by the user.
The report provides a way to identify patients who could possibly be inactivated in the register.

Enter the Name of the Register: IHS DIABETES REGISTER
Select the Patient Status for this report

Select one of the following:

- A  ACTIVE
- I  INACTIVE
- T  TRANSIENT
- U  UNREVIEWED
- D  DECEASED
- N  NON-IHS
- L  LOST TO FOLLOW-UP
- NON  NONCOMPLIANT
- 0  All Register Patients

Which Status: A//CTIVE

Enter the list of clinics that you have determined to be primary care clinics. You can enter them 1 at a time or enter a taxonomy using the ']' notation.

Enter CLINIC: [BGP PRIMARY CARE CLINICS       BGP PRIMARY CARE CLINICS]

Members of BGP PRIMARY CARE CLINICS Taxonomy =>

Want to save this CLINIC group for future use? No//   (No)

Enter the time frame to look for visits.

Enter Beginning Visit Date:  1/1/17  (JAN 01, 2017)
Enter Ending Visit Date:  T  (OCT 13, 2017)

Select one of the following:

- P  PRINT the List
- B  BROWSE the List on the Screen

Output Type: P// BROWSE the List on the Screen

Select one of the following:

- I  Include ALL Patients
2.2.3 Update Patient Register Status

Patient Register Status may be updated using menu selection 1 under Patient Management, to Edit Register Data, or in Visual DMS, using the Patient Profile option under Patient Management.

2.2.3.1 Edit Register Data in DMS:

Use the following steps to edit Register Data in DMS:

1. Open the Patient Management menu of DMS (Figure 2-6).
Addendum to User Manual
Prepare for the Audit
January 2018

Figure 2-5: Select Edit Register Data (1)

2. At the “Select Action” prompt, type 1 and press Enter.

Figure 2-6: Register Data

3. Move the cursor to the Status field and type the new status value over the old one.

4. Press the down arrow key to move the cursor to the “Command” prompt.

5. Type Save and press Enter.

6. To record the status update, type Exit at the “Command” prompt and press Enter. The window will close.

2.2.3.2 Edit Register Status in Visual DMS

Use the following steps to edit the Register Status in Visual DMS:

1. Select the desired Patient.

2. Open the Patient Management menu. (Figure 2-7)
3. Click **Patient Profile**. The **Patient Profile** dialog (Figure 2-8) displays.
4. To change the Register Status, select the new status from the **Status** list.

- **A-Active** patients who receive their primary healthcare at a facility and who have had care at that facility within the last year.
- **I-Inactive** patients who have not been seen within the last two years.
- **T-Transient** patients seen at the clinic within the past year but who do not receive their primary diabetic care at a facility and only visit the clinic periodically for medications or other services.
- **U-Unreviewed** patients on the Register who have not had a chart audit and medical review.
- **D-Deceased** patients.
• **N-Non-IHS** patients who receive their diabetes care at a facility.

• **L-Lost** to follow-up patients seen at a facility within the past two years but who have not had a visit in the last year.

• **NON-Noncompliant** patients with repeated documented refusals of recommended services.

**Note:** There are no official definitions of Register Status, although recommendations for classifying Register patients can be provided by Area Diabetes Consultants or their staff. The definitions that are listed can be used as a guideline in the absence of Area-defined criteria.

5. Click **Save**.

6. Close the dialog.

### 2.3 Create a Template of Patients for the 2018 Diabetes Audit

If the IHS Diabetes Register is not current or has not been routinely used for management of patients with diabetes, it might be advantageous to use a QMan search to identify patients with diabetes who have had a visit to a primary care clinic during the audit period. The template created from this query can be used for the 2018 Annual Diabetes Audit.

Users can run the QMan search using either the general patient population (see Section 2.3.1) or the Diabetes Register (see Section 2.2.2). In either case, if clients with diabetes who are not American Indian or Alaska Native are seen at the clinic or included in the Register, another Attribute called Classification should be used. The Classification for Indian/Alaska Native patients is 01.

#### 2.3.1 Create a Template using the General Population

The QMan search in the sequence that follows shows the creation of a template looking for patients with at least one diagnosis of diabetes during the audit period and who have had at least one visit to a primary care clinic during the audit period (Figure 2-9).

```

This template will be attached to IHS' PATIENT file (#9000001)

Enter the name of the SEARCH TEMPLATE: DM AUDIT 2018
Are you adding 'DM AUDIT 2018' as a new SORT TEMPLATE? No// Y  (Yes)
DESCRIPTION:
No existing text
Edit? NO//

Next, you will be asked about creating your template in background...

Answer 'YES' to run in background.

To run in background means to pass the template creation job off to Taskman. Your
terminal will be released so additional RPMS work may be performed while the
template is being created. When finished, Taskman will send you a Mailman message
indicating that the job is ready. Then, you may use the template in future Qman
searches, PGEN, VGEN and other reports that can utilize templates.

Answer 'NO', to create the search template in foreground.

While the template is being created, data will be displayed to your screen.
When the job has finished, you will have the opportunity to go to PGEN or VGEN.
Remember ... some templates may take a very long time to finish.

Press ENTER to continue or '^^' to quit:

Want to run this task in background? No//   (No)
2.3.2 Create a Template of Register Patients for the Audit

If a Diabetes Register exists but Register diagnoses and patient status have not been maintained, it might be easier to create a template of patients on the register who have had at least one visit to a primary clinic during the audit year with a diagnosis of diabetes. The QMan search demonstrating how to create that template is shown in the following sequences (Figure 2-10).

What is the subject of your search?  LIVING PATIENTS // REGISTER REGISTER

Which CMS REGISTER:  IHS DIABETES

Register being checked to update status of deceased patients.

Select the Patient Status for this report

1  Active  
2  Inactive  
3  Transient  
4  Unreviewed  
5  Deceased  
6  Non-IHS  
7  Lost to Follow-up  
8  All Register Patients

Which Status(es):  (1-8): 1// 8

Select the Diabetes Register Diagnosis for this report

Fileman users please note =>
This template will be attached to IHS' PATIENT file (#9000001)

Enter the name of the SEARCH TEMPLATE: DM AUDIT 2018
Are you adding 'DM AUDIT 2018' as a new SORT TEMPLATE? No// Y (Yes)
DESCRIPTION:
No existing text
Edit? NO//

Next, you will be asked about creating your template in background...

Answer 'YES' to run in background.

To run in background means to pass the template creation job off to Taskman. Your terminal will be released so additional RPMS work may be performed while the template is being created. When finished, Taskman will send you a Mailman message indicating that the job is ready. Then, you may use the template in future Qman searches, PGEN, VGEN and other reports that can utilize templates.

Answer 'NO', to create the search template in foreground.

While the template is being created, data will be displayed to your screen. When the job has finished, you will have the opportunity to go to PGEN or VGEN. Remember ... some templates may take a very long time to finish.

Press ENTER to continue or '^' to quit:

Want to run this task in background? No// (No)

...HMMMM, JUST A MOMENT PLEASE...

2.3.3 Report for Patients with Diabetes who are not on the Register

The Diabetes Management System provides a report for identifying patients who have one or more diagnoses of diabetes but are not currently on the Register. It may be useful to run this report before conducting an audit to see if patients should be added to the Register.
Note that this report does not exclude non-Indian patients. Directions for running this report are shown in the following sequence. A sample report is shown in Figure 2-16.

1. At the **Diabetes Management System** menu, type **RP** and press Enter.

2. Select DXNR Patients with DM Diagnosis and not on Register (Figure 2-11).

3. At the “Enter the Name of the Register” prompt, type some portion of the register name and press Enter (Figure 2-11).

4. At the “Choose” prompt, type the number corresponding to the register name and press Enter (Figure 2-11).

```
DXNR Patients with DM Diagnosis and not on Register.

This report will list patients who are not on the diabetes register but who have had a visit with a diagnosis of diabetes in a date range specified by the user.

Enter the Name of the Register: PARKER

1  PARKER DIABETES REGISTER
2  PARKER DIALYSIS PATIENTS

CHOOSE 1-2:  1  PARKER DIABETES REGISTER
```

Figure 2-11: DXNR Patients with DM Diagnosis and not on Register

5. At the “Enter Beginning Visit Date” prompt, type the beginning date and press Enter (Figure 2-12).

6. At the “Enter Ending Visit Date” prompt, type the ending date and press Enter (Figure 2-12).

```
Enter the time frame to look for visits with a diabetes diagnosis.

Enter Beginning Visit Date:   1/1/17  (JAN 01, 2017)
Enter Ending Visit Date:      12/31/17  (DEC 31, 2017)
```

Figure 2-12: Enter the time frame to look for visits with a diabetes diagnosis

7. At the “How many diagnoses must the patient have had in that time period” prompt, type the answer as a number and press Enter (Figure 2-13).

```
How many diagnoses must the patient have had in that time period:  (1-99): 3//
```

Figure 2-13: Type number of diagnoses the patient must have in the selected time period

8. At the “Output Type” prompt, do one of the following (Figure 2-14):
   - Type **P** and press Enter to print the list.
   - Type **B** and press Enter to browse the list on the screen.

```
Select one of the following:
```

Addendum to User Manual
Prepare for the Audit
January 2018
9. At the “Demo Patient Inclusion/Exclusion” prompt, do one of the following (Figure 2-15):
   a. Type **I** and press Enter to include all patients.
   b. Type **E** and press Enter to exclude demo patients.
   c. Type **O** and press Enter to include only demo patients.

Select one of the following:
- **I**: Include ALL Patients
- **E**: Exclude DEMO Patients
- **O**: Include ONLY DEMO Patients

Demo Patient Inclusion/Exclusion: E// xclude DEMO Patients

The report (Figure 2-16) is printed or displayed:

### 2.4 Update Taxonomies

The taxonomies listed in Figure 2-17 are referenced in the 2018 RPMS Diabetes Audit. You will notice in the list below that several of the taxonomies begin with BGP rather than DM AUDIT. These taxonomies, as well as several of the DM AUDIT taxonomies, are shared between the Government Performance and Results Act (GPRA) program and the DMS. It is imperative that staff work together to review and update these taxonomies.

Even though taxonomies might have been updated for the 2017 Annual Audit, they must be reviewed and updated again before running the 2018 Annual Audit. This is due to potentially new medications being added to the pharmacy formulary or new lab tests offered. You may note that although taxonomies exist for DM AUDIT DIET EDUC TOPICS, DM AUDIT EXERCISE EDUC TOPICS, and DM AUDIT OTHER EDUC TOPICS, review of these is not required unless your facility uses locally defined topics. DMS logic for determining whether education has been administered includes review of SNOMED terminology, diagnosis codes, and education topics with prefixes of MNT or DNCN or suffixes of -MNT, -DT, or -N.

Figure 2-17: Audit 2018 user-populated taxonomies

The taxonomies can be reviewed and updated with the TU18 option under the DM18 menu of the Diabetes Audit or the corresponding Visual DMS Update Taxonomy option.

When updating lab test taxonomies, attempting to add a test panel to a laboratory test taxonomy that should only include individual tests results in the display of a warning. This warning is displayed because the audit logic cannot correctly display hemoglobin A1C, lipid breakdown, or estimated GFR according to value categories if panels are included in the taxonomy. Panel tests have no values associated with them; only the tests within the panels have values.

Some taxonomies might not have any members. For example, if providers at a facility never prescribe INVOKANA, the DM AUDIT SGLP-2 DRUG taxonomy will not have any members.

Taxonomies in the following sections must be reviewed carefully in light of software changes or changes introduced in the 2018 Diabetes Audit. Possible members of the taxonomies are listed but are by no means to be considered comprehensive.

2.4.1 Drug Taxonomies

The listing of DM Audit Drug Taxonomies in Table 2-1 is provided for populating drug taxonomies. Review the lists of drugs with the pharmacist to be sure of those that are available at your facility or may be ordered as outside medications.

While there are two separate taxonomies for GLP-1 medications, DM AUDIT GLP-1 ANALOG DRUGS and DM AUDIT INCRETIN MIMETICS, the components of those taxonomies are displayed together as GLP-1 Meds on the audit.

Combination drugs should be added to the taxonomy for each of the components of that drug.

Medications entered as outside medications via the RPMS EHR can be orderable items, but they might not be in your facility’s drug file. If the medication is not in your facility’s drug file, the outside medication will not be stored in the V Medication file in Patient Care Component (PCC). If that is the case, those medications might not be found as drugs available to add to medication taxonomies, nor will they be included in the Diabetes Audit or Diabetes Patient Care Summary.

Note that the BGP PQA STATIN MEDS taxonomy is pre-populated using the NDC numbers of Statin Drugs and does not need to be reviewed or populated on a local basis. It is not listed in the Table of drug taxonomies needing review.

</table>
2.4.2 Laboratory Test Taxonomies

Table 2-2 lists the taxonomies that must be reviewed for potential changes in laboratory testing at a facility each year. Note that the DM AUDIT ALT, DM AUDIT AST, and DM AUDIT CREATINE KINASE taxonomies are used to check for test values that would be indicative of an adverse reaction to statin therapy.

</tbody>
</table>
With the advent of reference laboratory interfaces and Point of Care result entry, there is considerable variation in test nomenclature. Diabetes Program staff are encouraged to solicit assistance from both laboratory and pharmacy staff in updating taxonomies.

When deciding which tests should be included in a taxonomy, it may be useful to review test results on a health summary for a known patient with diabetes whose Standards of Care are current. Once test names are determined, the appropriate tests can be added or deleted from taxonomies.

Figure 2-18 shows a Health Summary sample with recommended taxonomy placement noted after the lab test on the health summary.
2.4.3 LMR–List Labs or Medications Used at this Facility

A report provided in DMS displays the laboratory tests reported or the drugs prescribed at a facility during the audit period. In addition to displaying the laboratory tests or drugs, it identifies those that are already included in a taxonomy used by the audit. To run the laboratory tests version of this report:

1. At the Diabetes Management Systems menu, type RP and press Enter.
2. At the Reports menu, type LMR (List Labs/Medications Used at this Facility) and press Enter.
3. At the “Do you wish to list” prompt, type L (LAB TESTS) and press Enter.
4. Type the beginning and ending dates for the report (1/1/17 and 12/31/17 for the 2018 Annual Diabetes Audit), pressing Enter after each.
5. At the “Do you wish to” prompt, do one of the following:
   - To print the output, accept the default (P) by pressing Enter. A prompt asking for the device name displays; type the device’s name and press Enter.
   - To browse the output on the screen, type B and press Enter.

A sample report is shown in Figure 2-19.
To run the version of this report for the medications that have been prescribed:

1. At the **Diabetes Management Systems** menu, type **RP** and press Enter.

2. At the **Reports** menu, type **LMR** (List Labs/Medications Used at this Facility) and press Enter.

3. At the “Do you wish to list” prompt, type **M** (MEDICATIONS) and press Enter.

4. Type the beginning and ending dates for the report (7/1/17 and 12/31/17 for the 2018 Annual Diabetes Audit), pressing Enter after each. The audit only reviews medications prescribed during the last six months of the audit period.

5. At the “Do you wish to” prompt, do one of the following:
   - To print the output, accept the default (P) by pressing Enter. A prompt asking for the device name displays; type the device’s name and press Enter.
   - To browse the output on the screen, type **B** and press Enter.

A sample report is shown in Figure 2-20.

2.4.4 View/Print Any DM Audit Taxonomy

The View/Print Any DM Taxonomy option may be used to review any taxonomy of CPT Codes, Diagnoses Codes, LOINC Codes, Medications, Laboratory Tests, or Education Topics that are used by the 2018 Diabetes Audit.

- Select DA, the Diabetes QA Audit Menu.
- Select DM18, the 2018 Diabetes Program Audit.
- Select VTAX View/Print Any DM Audit Taxonomy.

A list of the taxonomies used in the 2018 Diabetes Audit display (Figure 2-21) Note that there are six pages of taxonomies that may display. The up arrow or down arrow may be used to browse the list of taxonomies.

Type S to indicate a selection will be made. Then type the number preceding the taxonomy.

The taxonomy contents may be browsed on the screen or printed to a RPMS printer. Figure 2-22 shows a sample of the taxonomy contents for the creatinine kinase test.

![Figure 2-21: Taxonomy list for 2018 Diabetes Audit](image-url)
2.4.5 View a SNOMED List Used by the DM Audit

The View a SNOMED List Used by the DM Audit option may be used to review any SNOMED list that is used by the 2018 Diabetes Audit.

1. Select DA, the Diabetes QA Audit Menu.

2. Select DM18, the 2018 Diabetes Program Audit.

3. Select VSML View a SNOMED List Used by the DM AUDIT. A list of the SNOMED Lists used in the 2018 Diabetes Audit is displayed in Figure 2-23. Note that there are only five SNOMED Lists.

4. Type S to indicate a selection will be made.

5. Enter the number preceding the SNOMED List. The contents of the SNOMED List may be browsed on the screen or printed to a RPMS printer.

Figure 2-23: Selecting a SNOMED List used in the 2018 Diabetes Audit
3.0 Run the 2018 Audit

The directions for creating and submitting an electronic Diabetes Audit data file are outlined in the Audit 2018 Instructions at:

https://www.ihs.gov/diabetes/audit/audit-resources/.

In RPMS, Diabetes Audits can be run for individual patients, a template of patients, patients in a Register, or a random sample of patients in a Register. Additional options exist for running the Audit by Primary Care Provider, by Community, for only Indian/Alaska Native Patients, non-Indian/Alaska Native Patients, or both.

Output options include an individual audit, a cumulative audit, individual and cumulative audits, an SDPI Key Measures Report, or an Audit Export file. Even those doing manual audits may find it useful to print individual audits which most likely have some information on them, such as measurements.

3.1 Run an Individual Audit

Individual audits can be run at any time either via the Diabetes QA Audit Menu or via the Patient Management option to display the audit status. To run an individual audit using the Patient Management option:

1. At the Diabetes Management Systems menu, type PM and press Enter.

2. At the Patient Management menu, type 10 (Audit Status) and press Enter.

3. At the “Enter the Audit Date” prompt, type the ending date of the audit period desired and press Enter.

4. At the “Do you wish to print the Patient’s Name…?” prompt, do one of the following:
   a. To not print the patient’s name on the audit sheet, accept the default (N) by pressing Enter.
   b. To print the patient’s name, type Y and press Enter.

5. At the “Do you wish to” prompt, do one of the following:
   a. To print the output, accept the default (P) by pressing Enter. A prompt asking for the device name displays; type the device’s name and press Enter.
   b. To browse the output on the screen, type B and press Enter.

A sample individual audit is shown in Figure 3-1.
**REVIEWER initials:** LAM

Select all prescribed, as of the end of the audit period:  
- 1 None of the following  
- 2 Insulin  
- 3 Sulfonylurea (glyburide, glipizide, others)  
- 4 Repaglinide (Prandin) or Nateglinide (Starlix)  
- 5 Metformin (Glucophage, others)  
- 6 Acarbose (Precose) or miglitol (Glyset)  
- 7 Pioglitazone (Actos) or rosiglitazone (Avandia)  
- 8 GLP-1 med (Byetta, Bydureon, Victoza, Tanzeum, Trulicity)  
- 9 DPP4 inhibitors (Januvia, Onglyza, Tradjenta, Nesina)  
- 10 Amylin Analog (Symlin)  
- 11 Bromocriptine (Cycloset)  
- 12 Colesevelam (Welchol)  
- 13 SGLT-2 inhibitor (Invokana, Farxiga, Jardiance)  
- **X** 6 Acarbose (Precose) or miglitol (Glyset)  
- **ACE Inhibitor/ARB Prescribed, as of the end of the audit period:** 2  
- **No**
Figure 3-1: Individual audit sample

3.2 Run a Data Quality Check Report

This report is new in DMS for Audit 2018 and can be run to identify potential errors in the data extracted for your audit export file – the same errors that would be identified by WebAudit Data Quality Check. The DMS version of the report includes patient identifiers, which the WebAudit version does not, making it easier to locate and correct the relevant data. It is highly recommended that you run this report using DMS and fix all possible errors prior to uploading any data file to the WebAudit.
When running this report, use the exact same parameters that you will be using when creating the audit export file.

Figure 3-2 shows a script on how to run the Data Quality Check Report, followed by a sample report.

```plaintext
Diabetes Management System ...
DA Diabetes QA Audit Menu ...
DM18 2018 Diabetes Program Audit ...
DM17 Run 2017 Diabetes Program Audit

Select 2018 Diabetes Program Audit Option: DM18 Run 2018 Diabetes Program Audit

In order for the 2018 DM AUDIT Report to find all necessary data, several taxonomies must be established. The following taxonomies are missing or have no entries:
- DRUG taxonomy [DM AUDIT AMYLIN ANALOGUES] has no entries
- DRUG taxonomy [DM AUDIT COLESEVELAM DRUGS] has no entries
- DRUG taxonomy [DM AUDIT INCRETIN MIMETIC] has no entries
- DRUG taxonomy [DM AUDIT SGLT-2 INHIBITOR DRUG] has no entries
- DRUG taxonomy [DM AUDIT SULFONYLUREA-LIKE] has no entries

End of taxonomy check. HIT RETURN:

ASSESSMENT OF DIABETES CARE, 2018

PCC DIABETES AUDIT

Enter the Official Diabetes Register: IHS DIABETES

Enter the date of the audit. This date will be considered the ending date of the audit period. For most data items all data for the period one year prior to this date will be reviewed.

Enter the Audit Date: 12/31/17 (DEC 31, 2017)

Select one of the following:
- P Individual Patients
- S Search Template of Patients
- C Members of a CMS Register

Run the audit for: P//C Members of a CMS Register

Enter the Name of the Register: IHS DIABETES

Do you want to select register patients with a particular status? Y//ES
Which status: A//ACTIVE

There are 873 patients in the IHS DIABETES register with a status of A.

You have selected a register or template/cohort of patients.
You can run the audit just for the subset of patients in the cohort or register who live in a particular community or have a particular primary care provider.

Limit the audit to a particular primary care provider? N//O
Limit the patients who live in a particular community? N//O
```
Select one of the following:

1. Indian/Alaskan Native (Classification 01)
2. Not Indian Alaskan/Native (Not Classification 01)
3. All (both Indian/Alaskan Natives and Non 01)

Select Beneficiary Population to include in the audit: 1/ Indian/Alaskan Native (Classification 01)

Select one of the following:

I. Include Pregnant Patients
E. Exclude Pregnant Patients

Select whether to include or exclude pregnant patients in the audit: E/ Exclude Pregnant Patients

Okay, hold on...this may take a few minutes...

Note: When not running an official Audit, you may choose to include pregnant patients. Pregnant patients are identified as those who have had two or more pregnancy-related visits during the Audit period to a non-pharmacy clinic, or where the provider is not a CHR. The list of pregnancy-related diagnoses may be reviewed under the View/Print Taxonomy Lists.

There are 1227 patients selected so far to be used in the audit.

Select one of the following:

A. ALL Patients selected so far
R. RANDOM Sample of the patients selected so far

Do you want to select: A/ ALL Patients selected so far

Select one of the following:

1. Print Individual Reports
2. Create AUDIT EXPORT file
3. Cumulative Audit Only
4. Both Individual and Cumulative Audits

6. SDPI Key Measures Report (2016 Version)
7. Data Quality Check Report

Enter Print option: 1/ 7 Data Quality Check Report

Select one of the following:

I. Include ALL Patients
E. Exclude DEMO Patients
O. Include ONLY DEMO Patients

Demo Patient Inclusion/Exclusion: E/ Exclude DEMO Patients

Select one of the following:

P. PRINT Output
B. BROWSE Output on Screen

Do you wish to: P/ BROWSE Output on Screen

Figure 3-2: Running a Data Quality Check Report
If the PRINT Output option is selected, at the “Device” prompt, type the printer name. This report can be queued to run later as shown in Figure 3-3.

Device: HOME// Q <Enter> QUEUE TO PRINT ON
Device: P171 <Enter>
Start Date/Time: T@2000 <Enter>
Device: P180

Figure 3-3: Device prompt

Note: A queued report cannot be printed to a locally connected printer, usually referred to as a Slave printer.

A sample 2018 Data Quality Check Report is displayed in Figure 3-4.
3.3 Run a Cumulative Audit/Audit Report

Figure 3-5 shows a script for running a Cumulative Audit, also known as an Audit Report. The Audit Report can be either queued using the DM18 option in Visual DMS or run from the traditional RPMS menu. It is highly recommended that the 2018 Cumulative Audit be run and reviewed twice before creating a data file to submit for the Annual Diabetes Audit.

The first time, run a Cumulative Audit on all active members of the register with Type 1 or Type 2 Diabetes or on the created template of eligible patients with Type 1 or Type 2 Diabetes.
Review the initial Cumulative Audit carefully to be sure there are no Audit elements that have no data or that have far larger or smaller numbers than would be expected. This will ensure that there is no missing data due to improperly populated taxonomies. If required, review taxonomy set up, edit taxonomies as needed, and run and review the Cumulative Audit again to make sure that problems are corrected before creating the Audit Export file.

**Note:** A list of taxonomies that have no members can display. It is possible to have taxonomies with no members, if the drugs or laboratory tests referenced are not used at a facility.

</tbody>
</table>

Number of diabetes meds currently prescribed

| One med | 170 | 959 | 18% |
| Two meds | 142 | 959 | 15% |
| Three meds | 87 | 959 | 9% |
| Four or more meds | 10 | 959 | 1% |

ACE Inhibitor or ARB Prescribed

| In patients with known hypertension [3] | 392 | 711 | 55% |
| In patients age 18+ with CKD [1] | 174 | 242 | 72% |

Aspirin or Other Antiplatelet/Anticoagulant Therapy Prescribed

| In patients with diagnosed CVD | 218 | 389 | 56% |

Statin Prescribed

| Yes* | 217 | 921 | 24% |
| Allergy, intolerance, or contraindication | 38 | 959 | 4% |

| In patients with diagnosed CVD: | |
| Yes* | 129 | 365 | 35% |
| Allergy, intolerance, or contraindication | 24 | 389 | 6% |

| In patients aged 40-75: | |
| Yes* | 177 | 653 | 27% |
| Allergy, intolerance, or contraindication | 26 | 679 | 4% |

| In patients with diagnosed CVD and/or aged 40-75: | |
| Yes* | 207 | 765 | 27% |
| Allergy, intolerance, or contraindication | 32 | 797 | 4% |

*Excludes patients with an allergy, intolerance, or contraindication.

Exams

| Foot exam - comprehensive | 218 | 959 | 23% |
| Eye exam - dilated or retinal imaging | 303 | 959 | 32% |
| Dental exam | 239 | 959 | 25% |

Diabetes-Related Education

| Nutrition - by any provider (RD and/or other) | 283 | 959 | 30% |
| Nutrition - by RD | 153 | 959 | 16% |
| Physical activity | 199 | 959 | 21% |
| Other | 433 | 959 | 45% |
| Any of above topics | 466 | 959 | 49% |

</tbody>
</table>

### Kidney Evaluation

- **eGFR to assess kidney function**
  - (In age 18 and above)
  - eGFR >= 60 ml/min: 332 / 927 = 36%
  - eGFR 30-59 ml/min: 108 / 927 = 12%
  - eGFR 15-29 ml/min: 23 / 927 = 2%
  - eGFR < 15 ml/min: 34 / 927 = 4%
  - eGFR not tested or no valid result: 430 / 927 = 46%

- **Urine Albumin:Creatinine Ratio (UACR) to assess kidney damage**
  - Yes: 237 / 959 = 25%
  - No: 722 / 959 = 75%

- **In patients with UACR:**
  - Urine albumin excretion - Normal <30 mg/g: 124 / 237 = 52%
  - Urine albumin excretion - Increased:
    - 30-300 mg/g: 88 / 237 = 37%
    - >300 mg/g: 25 / 237 = 11%

- **In patients age 18 and above, eGFR and UACR done**
  - 230 / 927 = 25%

### Tuberculosis Status

- **TB Test done ever (skin or blood)**
  - 496 / 959 = 52%
- **If test done, skin test**
  - 492 / 496 = 99%
- **If test done, blood test**
  - 4 / 496 = 1%
- **If TB test done, positive result**
  - 59 / 496 = 12%
- **If positive TB test, treatment completed**
  - 5 / 59 = 8%
- **If negative TB test, test done after DM diagnosis**
  - 306 / 436 = 70%
IHS DIABETES CARE AND OUTCOMES AUDIT REPORT - RPMS AUDIT

AUDIT REPORT FOR 2018 (Audit Period 01/01/2017 to 12/31/2017)
for DEMO HOSPITAL
959 patients were audited

# of Patients Considered Percent
(Numerator) (Denominator)

Combined Outcome Measure
Patients age >= 40 meeting ALL of the following criteria: A1C <8.0, Statin prescribed*, and mean BP <140/<90
*Excludes patients with a statin allergy, intolerance, or contraindication

[1] CKD: eGFR <60 or UACR =>30
[2] Comorbid conditions counted are: active depression, current tobacco use, severely obese (BMI 40 or higher), diagnosed hypertension, diagnosed CVD, CKD (eGFR<60 or uACR=>30), hepatitis C, and retinopathy.
[3] Known hypertension: Has hypertension listed as an active problem, or three visits with a diagnosis of hypertension ever (prior to the end of the Audit period).
[4] For triglycerides: >150 is a marker of CVD risk, not a treatment target; >1000 is a risk marker for pancreatitis.

3.4 Create an Audit Export (Data) File

A script for running the 2018 Diabetes Audit and creating an Audit Export (Data) file for submission via the WebAudit is shown in Figure 3-8.

IHS recommends that the Annual Audit include all eligible Register patients; however, there may be patients on the register who do not have Type 1 or Type 2 diabetes or otherwise do not meet the inclusion and exclusion criteria outlined in the Audit 2018 Instructions and in Section 2.1.

1. At the Diabetes Management Systems menu, Type DA and press Enter.

2. At the Diabetes QA Audit menu, Type DM18 (2018 Diabetes Program Audit) and press Enter.

3. Select DM18, the option to Run 2018 Diabetes Program Audit.

The following sequence displays:

DM18 Run 2018 Diabetes Program Audit
Select 2018 Diabetes Program Audit Option: DM18  Run 2018 Diabetes Program Audit

In order for the 2018 DM AUDIT Report to find all necessary data, several taxonomies must be established. The following taxonomies are missing or have no entries:

- DRUG taxonomy [DM AUDIT AMYLIN ANALOGUES] has no entries
- DRUG taxonomy [DM AUDIT COLESEVELAM DRUGS] has no entries
- DRUG taxonomy [DM AUDIT INCRETIN MIMETIC] has no entries
- DRUG taxonomy [DM AUDIT SGLT-2 INHIBITOR DRUG] has no entries
- DRUG taxonomy [DM AUDIT SULFONYLUREA-LIKE] has no entries

End of taxonomy check. HIT RETURN:

ASSESSMENT OF DIABETES CARE, 2018

PCC DIABETES AUDIT

Enter the Official Diabetes Register: IHS DEMO HOSPITAL

Enter the date of the audit. This date will be considered the ending date of the audit period. For most data items all data for the period one year prior to this date will be reviewed.

Enter the Audit Date: 12/31/17  (DEC 31, 2017)

Select one of the following:

P  Individual Patients
S  Search Template of Patients
C  Members of a CMS Register

Run the audit for: P// C  Members of a CMS Register

Enter the Name of the Register: IHS DEMO HOSPITAL

Do you want to select register patients with a particular status? Y// ES

Which status: A// ACTIVE

There are 873 patients in the IHS DEMO HOSPITAL REGISTER register with a status of A.

You have selected a register or template/cohort of patients. You can run the audit just for the subset of patients in the cohort or register who live in a particular community or have a particular primary care provider.

Limit the audit to a particular primary care provider ? N// O

Limit the patients who live in a particular community ? N// O

Select one of the following:

1  Indian/Alaskan Native (Classification 01)
2  Not Indian Alaskan/Native (Not Classification 01)
3  All (both Indian/Alaskan Natives and Non 01)

Select Beneficiary Population to include in the audit: 1// Indian/Alaskan Native (Classification 01)

Select one of the following:

I  Include Pregnant Patients
E  Exclude Pregnant Patients
Select whether to include or exclude pregnant patients in the audit: E/= xclude Pregnant Patients
okay, hold on...this may take a few minutes..

Note: When not running an official Audit, you may choose to include pregnant patients. Pregnant patients are identified as those who have had two or more pregnancy-related visits during the Audit period to a non-pharmacy clinic, or where the provider is not a CHR. The list of pregnancy-related diagnoses may be reviewed under the View/Print Taxonomy Lists.

There are 861 patients selected so far to be used in the audit.

Select one of the following:
A = ALL Patients selected so far
R = RANDOM Sample of the patients selected so far

Do you want to select: A/= LL Patients selected so far

Select one of the following:
1 = Print Individual Reports
2 = Create AUDIT EXPORT file
3 = Cumulative Audit Only
4 = Both Individual and Cumulative Audits
5 = SDPI Key Measures Report (2016 Version)
6 = SDPI Key Measures Report (2018 Version)

Enter Print option: 1/= 2  Create AUDIT EXPORT file

The file generated will be in a “^” delimited format. You can use this file to review your data in EXCEL if you so choose.

Enter the name of the FILE to be Created (3-20 characters): DKR 2018 AUDIT

The file generated will be in a “^” delimited format. You can use this file to review your data in EXCEL if you so choose.

Enter the name of the FILE to be Created (3-20 characters): DKR 2018 AUDIT

I am going to create a file called dkr 2018 audit.txt which will reside in the X:\EXPORT directory on your RPMS server.
It is the same directory that the data export globals are placed. See your site manager for assistance in finding the file after it is created. PLEASE jot down and remember the following file name:
********** dkr 2018 audit.txt **********
It may be several hours (or overnight) before your report and flat file are finished.

The records that are generated and placed in file dkr 2018 audit.txt are in a format readable by Excel. For a definition of the format please see your user manual.

Is everything ok?  Do you want to continue? Y/=ES

Select one of the following:
I = Include ALL Patients
E = Exclude DEMO Patients
O = Include ONLY DEMO Patients
Run the 2018 Audit

Figure 3-8: Creating an Audit Export file

Make a note of the file name and notify the RPMS site manager that a Diabetes Audit has been run. Provide the name of the file and the directory where the file is stored. The site manager will place the file in a shared folder on the server where it can be accessed and uploaded to the WebAudit.

3.5 Run an SDPI Report

The option to create an SDPI Key Measures Report using either the 2015 or 2016 elements resides under the Diabetes Audit Menu.

1. At the Diabetes Management Systems menu, type DA and press Enter.

2. Type DM18 (2018 Diabetes Program Audit) and press Enter.

3. Select DM18 (Run 2018 Diabetes Program Audit) and follow the prompts as shown in the script in Figure 3-9 to generate an SDPI Key Measures Report.
Members of a CMS Register

Run the audit for: P// C Members of a CMS Register

Enter the Name of the Register: IHS DEMO HOSPITAL
Do you want to select register patients with a particular status? Y// ES
Which status: A// ACTIVE

There are 873 patients in the IHS DEMO HOSPITAL REGISTER register with a status of A.

You have selected a register or template/cohort of patients. You can run the audit just for the subset of patients in the cohort or register who live in a particular community or have a particular primary care provider.

Limit the audit to a particular primary care provider? N// O
Limit the patients who live in a particular community? N// O

Select one of the following:
1 Indian/Alaskan Native (Classification 01)
2 Not Indian Alaskan/Native (Not Classification 01)
3 All (both Indian/Alaskan Natives and Non 01)

Select Beneficiary Population to include in the audit: 1// Indian/Alaskan Native (Classification 01)

Select one of the following:
I Include Pregnant Patients
E Exclude Pregnant Patients

Select whether to include or exclude pregnant patients in the audit: E// Exclude Pregnant Patients

okay, hold on...this may take a few minutes..

Note: When not running an official Audit, you may choose to include pregnant patients. **Figure 3-10: Sample SDPI Key Measures Report**

---

Diabetes Management System (BDM)  
Version 2.0 Patch 11
4.0 **Upload the Export (Data) File to WebAudit**

Upload the audit data file to the WebAudit for data cleaning, report generation, and submission of data to the IHS Division of Diabetes. For further information and resources, visit the IHS Division of Diabetes Audit website at [https://www.ihs.gov/diabetes/audit/](https://www.ihs.gov/diabetes/audit/).

Use the following steps to upload the file:

1. Request and activate a WebAudit account if you do not already have one.

2. Log in to WebAudit.

3. Select **Enter Facility Info** from the menu on the left or, from the main menu, select **Facility Administration**, then **Enter Facility Information**.

4. Enter the number of patients in the diabetes registry that meet the inclusion and exclusion criteria found in the 2018 Audit Instructions and Section 2.1.

5. Click **Save**.

6. Select **Upload Data** from the menu on the left or, from the main menu, select **Data Processing**, then **Upload Data**.

7. Select an Audit Type. For the Annual Audit submitted to the IHS Division of Diabetes, select **Annual Audit**. For all other audits, select **Interim Audit**.

8. Individuals with access to multiple facilities will need to select a Facility.

9. Click **Browse** and navigate to the data file, then click **Open**.

10. When the data file is selected, click **Upload File**.
    
    a. If the upload of the data file is successful, you will receive a message on the screen telling you that the file was successfully uploaded.

    b. If the upload is unsuccessful, you will receive an on-screen message telling you that the file upload attempt was unsuccessful, with a brief description of the problem.

11. Once the file has been successfully uploaded, proceed with checking the data quality and generating reports, as described in the Audit 2018 Instructions, which can be found on the Audit website: [https://www.ihs.gov/diabetes/audit/audit-resources/](https://www.ihs.gov/diabetes/audit/audit-resources/).
5.0 Import the Audit Export (Data) File to Excel

When researching patients or data values, it may be helpful to import the Audit Export file into Excel to sort or filter data. The 2018 Diabetes Audit Export file is a delimited text file. This means that the file has all of the audit data elements for each patient in a single row with fields separated by a caret (^). Not only can the file be uploaded to the WebAudit, but it can also be imported into Excel for local use. The data fields are identified by headers in the first row of the file.

Appendix B provides details about the Audit Export file format and field definitions.

Figure 5-1 shows an Audit Export file opened in Notepad.

To import a file into Excel:

1. Open Excel and select a blank workbook.
2. Click File, then Open, browse to the folder containing the Audit Export file.
3. Change the file type from **All Excel Files** to **All Files** in the list (Figure 5-2). This is necessary to see and select the Audit Export file, which is not in Excel format.

4. Select the Audit Export file to import.

5. Click **Open**. The **Text Import Wizard – Step 1 of 3** dialog (Figure 5-3) displays.
6. If the Text Import Wizard does not correctly identify that this is a delimited file, select the **Delimited** option button.

7. Click **Next**. The **Text Import Wizard – Step 2 of 3** dialog (Figure 5-4) displays.
8. Under Delimiters, select the Other check box and type a caret (^) in the field to the right of the check box.

9. Deselect the Tab check box.

10. Click Next. Vertical lines will display between the columns of data.

11. Click Finish to complete the import to Excel. Expand columns and sort data as desired.

12. To save the file in Excel format, select Save As.

13. Save as an Excel file. Save the Excel file in a secure folder as identified by the Information Technology (IT) staff at your facility.

**Note:** The Excel file cannot be uploaded to the WebAudit; the original delimited text file must be uploaded.
6.0 Identify Patients with Potential Errors in the Audit Export File

The new DMS Data Quality Check report can be run to identify potential data errors prior to uploading data to the WebAudit (see Section 3.2). This DMS report includes patient identifiers, which the WebAudit version does not. If you do need to identify patients from the WebAudit version of the Data Quality Check, you can use the instructions below.

1. In the WebAudit, use the Data Quality Check tool to run the Annual Audit Potential Data Entry Errors Details report, as shown in Figure 6-1.

![Figure 6-1: Sample of WebAudit Annual Audit Potential Data Entry Error Details Report](image-url)
2. Scan through the errors. Use the link to add comments as needed or click the button to edit the record in order to gather additional data required to identify the patient.

   a. The Yr/Mo of Birth, Sex, and Date of Diagnosis may all be used to identify the patient either via iCare or using the GEN Report option in the Diabetes Management System.

   b. Once the patient is identified, either edit the record directly in the WebAudit using the View/Edit Data tool or correct the data in RPMS, then generate and upload a new Audit Export file.

In Figure 6-2, the first patient with a WebAudit ID of 1008 has an unlikely value recorded for year of birth, which should be investigated and corrected if necessary.

![Figure 6-2: Sample of WebAudit Annual Audit Potential Data Entry Error Details Listing](image-url)
Two ways for using the GEN Report to identify patients are described below:

- Option 1: Identifying the patient by Date of Diagnosis
- Option 2: Identifying the patient by Register Status, Sex, and Year and Month of Birth

### 6.1 Identify patients by Date of Diagnosis

1. Type **RP** at the Diabetes Management System main menu and press Enter.
2. Type **RR** and press Enter.
3. Type **GEN** and press Enter.
4. At the “Do you want to use a PREVIOUSLY DEFINED REPORT?” prompt (Figure 6-3), press Enter to accept the default (bypass the option to use a previously defined report).

This report will produce a listing of Patients on a Register selected by the user. You will be asked (in three separate steps) to identify your selection criteria; what you wish displayed for each patient; and the sorting order for your list. You may save the logic used to produce the report for future use. If you design a report that is 80 characters or less in width, it can be displayed on your screen or printed. If your report is 81-132 characters wide, it must be printed - and only on a printer capable of producing 132 character lines.

5. At the “Select Patients based on which of the above” prompt, type 33 (Date of Onset) and press Enter (Figure 6-4).
6. At the “Enter beginning Date of Onset for Search” prompt, type the date of diagnosis of the patient and press Enter (Figure 6-5).

```
Date of Onset Selection.
Enter beginning Date of Onset for Search: 02/26/2004 <Enter>
```

Figure 6-5: Enter beginning date of onset

7. At the “Enter ending Date of Onset for Search” prompt, type the date of patient’s diagnosis (the original date entered will display as a default date) and press Enter (Figure 6-6).

```
Enter ending Date of Onset for Search: Feb 26, 2004 <Enter>
```

Figure 6-6: Enter ending date of onset

8. At the “Would you like to select additional PATIENT criteria?” prompt, press Enter to select the default (No – Figure 6-7).

```
CMS REGISTER PATIENT Selection Criteria:
Date of Onset: FEB 26, 2004-FEB 26, 2004
Would you like to select additional PATIENT criteria? NO <Enter>
```

Figure 6-7: Prompt for additional patient criteria

9. At the “Select print item(s)” prompt, type 1,2,3,5,39 and press Enter to print the corresponding items (Patient Name, Patient Chart, Patient Sex, Patient Date of Birth, and Patient Date of Onset – Figure 6-8).

```
Select one of the following:
T      Total Count Only
S      Sub-counts and Total Count
D      Detailed Patient Listing
F      Delimited Export File

Choose Type of Report: D/D Detailed Patient Listing
At the “Choose Type of Report” prompt, press Enter to select the default (D Detailed Patient Listing).

Note: More than one patient may have the same date of diagnosis and the additional print criteria of date of birth and sex should help identify the correct patient.

6.2 Identify Patients by Age and Sex

This report may be run to identify patients who do not have a date of diagnosis uploaded to the WebAudit. It is run much the same as the report searching for Date of Onset, except on the Patient Selection Screen, Selection items will include Date of Birth, Sex, and Register Status.

1. Type RP at the Diabetes Management System menu and press Enter.

2. Type RR and press Enter.

3. Type GEN and press Enter.

4. At the “Do you want to use a PREVIOUSLY DEFINED REPORT?” prompt, press Enter to accept the default (bypass the option to use a previously defined report – Figure 6-15).

This report will produce a listing of Patients on a Register selected by the user. You will be asked (in three separate steps) to identify your selection criteria; what you wish displayed for each patient; and the sorting order for your list. You may save the logic used to produce the report for future use. If you design a report that is 80 characters or less in width, it can be displayed on your screen or printed. If your report is 81-132 characters wide, it must be printed - and only on a printer capable of producing 132 character lines.

7.0 Display 2018 Diabetes Audit Logic

The revised logic for the 2018 Diabetes Audit is provided under the DAL menu option in the DA Diabetes QA Audit menu, as shown in Figure 7-1.

1. At the Diabetes Management Systems menu, type DA and press Enter.

2. At the Diabetes QA Audit menu, type DAL (Display Audit Logic) and press Enter.

3. At the “Select DMS AUDIT ITEM DESCRIPTIONS AUDIT YEAR” prompt, type 2018 for the audit year and press Enter to display the item list.

4. At the “Select Action” prompt, type S and press Enter to enable selection of an audit logic item for review.

5. At the next “Select Action” prompt, type the number of the logic item to be displayed and press Enter.

6. Once the audit logic for a selected item displays, print it by typing PL at the “Select Action” prompt of the logic item display.

7. Enter the desired printer for the output at the DEVICE prompt.

Figure 7-1: 2018 Audit Logic display
Appendix A of this document provides a complete listing of the logic for all audit items.
8.0 Audit Resources

- The complete DMS v2.0 User Manual (bdm_020u.pdf) can be found on the RPMS website: https://www.ihs.gov/RPMS/PackageDocs/BDM/bdm_020u.pdf.

- Complete Diabetes Audit 2018 information can be found on the IHS Division of Diabetes website: https://www.ihs.gov/diabetes/audit/.

- IHS Standards of Care and Clinical Practice Recommendations: Type 2 Diabetes can be found on the IHS Division of Diabetes website: https://www.ihs.gov/diabetes/clinician-resources/soc/.
9.0 Diabetes Patient Care Summary

The Diabetes Patient Care Summary or Supplement displays as the last page of a Health Summary or can be displayed or printed as a stand-alone document either from RPMS or EHR. The Diabetes Patient Care Summary uses the same taxonomies and most of the same logic used for the Diabetes Audit. The displayed results are based on the most recent data available rather than a specified audit period.

Except for ACE Inhibitor/ARB drugs, statin drugs, and aspirin/anti-platelet/anti-coagulant drugs, no other drugs are displayed on the Diabetes Patient Care Summary. Medication information may be readily accessed via other EHR and RPMS options. The word “Maybe” as seen in the sample Diabetes Patient Care Summary is a sign that a visit to a Dental Clinic or a provider type of Dentist was documented. No specific Dental Code, CPT code, or exam code was documented. The word “Maybe” may also display for Eye Exams and Foot Exams when a visit to a specific clinic or provider type was found, but not the specific code for the diabetic exam. Missing or inaccurate data might be a warning that taxonomies should be reviewed and updated.

Use the following steps to display the Diabetes Care Summary:

1. At the Diabetes Management Systems menu, type DA and press Enter.

2. At the Diabetes QA Audit menu, type DPCS (Display a Patient’s DIABETES CARE SUMMARY) and press Enter. The Diabetes Care Summary displays (Figure 9-1).

Figure 9-1: Sample Diabetes Patient Care Summary
Appendix A: 2018 Diabetes Audit Logic

Notes: Audit Logic uses several taxonomies for diagnosis codes, CPT codes, LOINC codes, SNOMED codes, and medications that are used by other national RPMS programs. The contents of those taxonomies may be reviewed by using the VTAX (View/Print Any DM Audit Taxonomy) report option, found in the Diabetes Management System Reports menu.

View or print the contents of site-populated taxonomies by using the TU18 (Update/Review Taxonomies for 2018 DM Audit) menu option under the DM18 menu option of the Diabetes Audit menu.

View contents of SNOMED lists by using the VSML (View a SNOMED List Used by the DM AUDIT) menu option.

DM AUDIT LOGIC DESCRIPTIONS

AUDIT DATE
This date, supplied by the user, determines the time period for which data are reviewed for the Audit. For most Audit elements, data are reviewed for the 12 months prior to the Audit date, known as the Audit period.

For example, if the Audit date is December 31, 2017, data are reviewed for the year prior to this date (January 1–December 31, 2017).

FACILITY NAME
This is the name of the facility at which the Audit is being run. It is the division or facility to which the user logged in. (The DUZ(2) variable is used.)

REVIEWER INITIALS
Initials of the person running the Audit. A maximum of 3 initials may be used. This information is taken from the New Person (file 200) entry for the user.

STATE OF RESIDENCE
This is the state in which the patient resides at the time the Audit is conducted. This is captured from the mailing address.

CHART NUMBER
Health record number of the patient at the facility at which the Audit is run.

Note: This item is not included in the Audit Export (Data) File and cannot be uploaded to the WebAudit.
DATE OF BIRTH
The patient's Date of Birth. Obtained from data entered through patient registration.

Only the month and year of birth are included in the Audit Export (Data) File and can be uploaded to the WebAudit, along with the age of the patient as of the Audit date.

SEX
The gender of the patient. Obtained from data entered through patient registration.

PRIMARY CARE PROVIDER
The name of the primary care (designated) provider documented in RPMS. Taken from field Primary Care Provider (#.14) of the patient file.

Note: This item is not included in the Audit Export (Data) File and cannot be uploaded into the WebAudit.

DATE OF DIABETES DIAGNOSIS
The diabetes onset date. This date is used in the calculation of the duration of diabetes. Users can chose from three different dates:

- The date of onset from the Diabetes Register.
- The earliest date of onset from all diabetes related problems on the problem list. The problem list is scanned for all problems in the ICD diagnosis code ranges defined in the SURVEILLANCE DIABETES taxonomy or SNOMED code defined in PXRM DIABETES SNOMED subset.
- The first recorded diagnosis (POV) of diabetes in PCC. ICD codes: SURVEILLANCE DIABETES taxonomy.

Cumulative Audit: When calculating the duration of diabetes, the earliest of the date of onset from the diabetes register or the problem list date of onset is used. Duration of diabetes is calculated from that date to the Audit date. If neither the date of onset in the register nor the date of onset in the problem list is recorded, the duration of diabetes is not calculated. The first diagnosis date from POV is not used.

Audit Export (Data) File: The earliest date found from the Diabetes register or the problem list is exported. Format: MM/DD/YYYY

DM TYPE
The following logic is used to determine diabetes type. Once a 'hit' is made, no further processing is done.
1. If the diagnosis documented in the Diabetes Register is NIDDM the type is assumed to be Type 2.
2. If the diagnosis documented in the Diabetes Register is "TYPE II" the type is assumed to be Type 2.
3. If the diagnosis documented in the Diabetes Register contains a '2' the type is assumed to be Type 2.
4. If the diagnosis documented in the Diabetes Register contains IDDM the type is assumed to be Type 1.
5. If the diagnosis documented in the Diabetes Register is "Type I" the type is assumed to be Type 1.
6. If the diagnosis documented in the Diabetes Register contains a '1'
the type is assumed to be Type 1.
7. If no diagnosis is documented in the Diabetes Register, or it does not
contain any of the above strings the problem list is then scanned. If any
diabetes diagnosis on the problem list [SURVEILLANCE DIABETES taxonomy]
is also in the DM AUDIT TYPE II DXS taxonomy then the type is assumed to
be Type 2.
8. If any diabetes diagnosis on the problem list is also in the DM AUDIT
TYPE I DXS taxonomy then the type is assumed to be Type 1.
9. If no diagnosis exists on the problem list or in the diabetes
register, then the last PCC purpose of visit related to diabetes is
reviewed. If the diagnosis is contained in the DM AUDIT TYPE II DXS
taxonomy the type is assumed to be Type II, if it is contained in the DM
AUDIT TYPE I DXS taxonomy it is assumed to be Type I.
10. If type is not determined by any of the above, type is assumed to be
Type 2 for the Audit (Data) Export File and Cumulative Audit. For the
Individual Audit and Diabetes Health Summary, "Not Documented" is
displayed.

TOBACCO - SCREENED DURING AUDIT PERIOD
If any of the following items is documented during the Audit period then
a value of 1 - Yes is assigned. Otherwise, a value of 2 - No is assigned.
- Health Factor in the TOBACCO (SMOKING) Category.
- Health Factor in the TOBACCO (SMOKELESS - CHEWING/DIP) Category.
- The PCC Problem list and purpose of visits are scanned for any diagnosis
  contained in the BGP TOBACCO DXS taxonomy.
- Any visit with Dental ADA code 1320 documented.
- Any visit with the following CPT codes documented:
  BGP TOBACCO SCREEN CPTS taxonomy.

TOBACCO USE STATUS
The last documented of the following items is found:
1. Health Factors in the categories TOBACCO (SMOKING) and TOBACCO
   (SMOKELESS - CHEWING/DIP) that relate to the patient’s tobacco use
status. As of the DM Audit 2018 these are the health factors available:
   (the ones with one asterisk (*) indicate a current user, those with two
   asterisks (**) are non-tobacco users, the others are put in the "Not
   Documented" category).
   *CURRENT SMOKELESS TOBACCO (SMOKELESS - CHEWING/D
   **PREVIOUS (FORMER) SMOKELESS TOBACCO (SMOKELESS - CHEWING/D
   *CESSATION-SMOKELESS TOBACCO (SMOKELESS - CHEWING/D
   SMOKELESS TOBACCO, STATUS UNKNOWN TOBACCO (SMOKELESS - CHEWING/D
   **NEVER USED SMOKELESS TOBACCO TOBACCO (SMOKELESS - CHEWING/D
   **NON-TOBACCO USER TOBACCO (SMOKING)
   *CURRENT SMOKER, STATUS UNKNOWN TOBACCO (SMOKING)
   **PREVIOUS (FORMER) SMOKER TOBACCO (SMOKING)
   *CESSATION-SMOKER TOBACCO (SMOKING)
   *CURRENT SMOKER, EVERY DAY TOBACCO (SMOKING)
   *CURRENT SMOKER, SOME DAY TOBACCO (SMOKING)
   **NEVER SMOKED TOBACCO (SMOKING)
   SMOKING STATUS UNKNOWN TOBACCO (SMOKING)
   *HEAVY TOBACCO SMOKER TOBACCO (SMOKING)
   *LIGHT TOBACCO SMOKER TOBACCO (SMOKING)

If a factor is found in each of these categories, the one that indicates
a tobacco user is used. If one is found in just one category it is used.
For example, patient has LIGHT TOBACCO SMOKER and NEVER USED SMOKELESS
TOBACCO documented - the LIGHT TOBACCO USER is used. If the patient has
NEVER SMOKED and CURRENT SMOKELESS documented, CURRENT SMOKELESS is used.

2. Diagnoses contained in the BGP TOBACCO DXS taxonomy. Both the V POVs and Problem List are checked. The latest documented diagnosis that is contained in the taxonomy is used. Diagnoses that indicate a tobacco user: diagnoses codes in the BGP TOBACCO USER DXS taxonomy, all others are considered non-tobacco user.

3. Dental ADA code 1320 - TOBACCO USE INTERVENTION TO PREVENT DISEASE. If this code is documented the patient is considered a tobacco user.

4. A CPT code documented that is in the BGP TOBACCO SCREEN CPTS taxonomy. If the code found is in the BGP TOBACCO USER CPTS taxonomy the patient is considered a tobacco user, all others are considered a non-tobacco user.

If the patient is a user then "1 - Current user" is assigned.
If the patient is not a tobacco user then "2 - Not a current user" is assigned.
Otherwise "3 - Not documented" is assigned.

TOBACCO CESSATION COUNSELING
If the tobacco use status is "1 - Current user" then counseling documented in the past year is searched for.
Counseling is defined as any of the following:

1. A health factor containing the word CESSATION documented in the past year. (CESSATION-SMOKELESS, CESSATION-SMOKER) Taxonomy used: DM AUDIT CESSATION HLTH FACTOR.
2. A visit to clinic 94 - TOBACCO CESSATION CLINIC
3. A patient education topic that meets the following criteria:
   a. Begins with TO- (e.g. TO-Q)
   b. Ends in -TO (e.g. CAD-TO)
   c. Begins with any Tobacco User diagnosis (taxonomy is BGP TOBACCO USER DXS) (e.g. 305.1-L)
   d. Begins with any Tobacco User CPT code (e.g. 99407-L)
   e. Begins with a SNOMED code from the PXRM BGP TOBACCO TOPICS, PXRM BGP TOBACCO SMOKER, PXRM BGP TOBACCO SMOKELESS or PXRM BGP QUIT TOBACCO SNOMED code lists. To see a list of these codes use option VSML View a SNOMED List Used by the DM AUDIT which can be found on the DM18 menu.
4. Any of the following CPT codes documented. These indicate tobacco use counseling: CPT code D1320, 99406, 99407, G0375 (old code), G0376 (old
5. Dental ADA code 1320.

The latest documented of the above 5 data elements is displayed along with the date.

If no counseling is found then the system will look for a smoking aid prescribed:
Any prescription for a medication in the site-populated BGP CMS SMOKING CESSATION MEDS taxonomy that does not have a comment of RETURNED TO STOCK. A prescription for any medication with name containing "NICOTINE PATCH", "NICOTINE POLACRILEX", "NICOTINE INHALER", or "NICOTINE NASAL SPRAY" that does not have a comment of RETURNED TO STOCK.

If any the above is found, then a value of 1 - Yes is assigned.
Otherwise, a value of 2 - No is assigned.

ELECTRONIC NICOTINE (ENDS)-SCREENED DURING AUDIT PERIOD
The last documented health factor in the category ELECTRONIC NICOTINE DELIV SYSTEM (ENDS) during the Audit period is found.

Screened for electronic nicotine delivery system (ENDS) use during Audit
period:
If a health factor is found a value of 1 - Yes is assigned.
If no health factors have been recorded during the Audit period a value of
2 - No is assigned.

ENDS USE STATUS
The last documented health factor in the category ELECTRONIC NICOTINE
DELIV SYSTEM (ENDS) is found.
Use status is assigned as follows:
CURRENT ENDS USER: 1 - Current User
CESSATION ENDS USER: 1 - Current User
PREVIOUS ENDS USER: 2 - Not a current user
NEVER USED ENDS USER: 2 - Not a current user
No health factor recorded: 3 - Not documented

HEIGHT
The last recorded height value taken on or before the Audit date.
Total height in inches is displayed for the Individual Audit and Diabetes
Health Summary.

AUDIT Export (Data) File: The last recorded height prior to the Audit
date is exported - either in feet and inches or just
inches. The inches are rounded to 2 decimal digits. For example, 1.25
inches.

WEIGHT
The last recorded Weight value documented during the Audit period.

AUDIT Export (Data) File: The last recorded weight during the Audit
period is exported, truncated to the nearest whole pound.

BMI
BMI is calculated as:
BMI = (weight/height*height) x 703.
weight=the last weight (in lbs) documented during the Audit period.
height=the last height (in inches) recorded any time before the Audit
date.
Cumulative Audit: The number and percent of patients in each BMI category
are calculated. If the patient did not have a height or weight recorded
as described above, they are put into the "Height or weight missing"
category.
Note: This item is not included in the Audit Export (Data) File.

HYPERTENSION DOCUMENTED
If hypertension is on the problem list or the patient has had at least 3
visits with a diagnosis of hypertension ever, then it is assumed that
they have hypertension and a value of 1 - Yes is assigned. Otherwise, a
value of 2 - No is assigned.

Taxonomy used: SURVEILLANCE HYPERTENSION.
SNOMED List: PXRM ESSENTIAL HYPERTENSION. To see a list of these codes
use option "VSML- View a SNOMED List Used by the DM AUDIT" which can be found on the Diabetes Audit menu.

BLOOD PRESSURES (LAST 1, 2 or 3)
The most recent recorded blood pressure values (up to three on different days) on non-ER clinic visits during the Audit period are obtained. If more than one blood pressure is recorded on any one day, the latest one is used.

Cumulative Audit: If two or three blood pressures are available, then the mean is calculated and used to determine the blood pressure category. If only one blood pressure is available, it used to determine the category.

AUDIT Export (Data) File: The blood pressure values obtained above are exported, but mean blood pressure is not.

FOOT EXAM - COMPLETE
The logic used in determining if a comprehensive or complete foot exam has been done is as follows:

1. A documented DIABETIC FOOT EXAM, COMPLETE (CODE 28) is searched for in the year prior to the Audit date. This is recorded in V Exam. If found, no other processing is done, an exam is assumed to have been done.
2. CPT codes 2028F and G9226 in V CPT [Taxonomy: BGP CPT FOOT EXAM]
3. A visit on which a podiatrist (provider class codes 33=PODIATRIST, 84=PEDORTHIST or 25=CONTRACT PODIATRIST) that is not a DNKA visit is searched for in the year prior to the Audit date. If found, it is assumed the exam was done and no further processing is done.
4. A visit to clinic 65=PODIATRY or B7=Diabetic Foot clinic that is not a DNKA is searched for in the year prior to the Audit date. If found, no other processing is done.

If any of the above is found, a value of 1 - Yes is assigned. If none of the above are found the value is 2 - No.

EYE EXAM (dilated or retinal imaging)
The logic used in determining if a diabetic eye exam has been done is as follows:
1. The system looks for the last documented Diabetic Eye Exam in the year prior to the Audit date. Diabetic Eye Exam is defined as:
   a. EXAM 03 - Diabetic Eye Exam
   b. CPT in the DM AUDIT EYE EXAM CPTS taxonomy.
2. If one of the above is found, the value 1 - Yes is assigned and no further processing is done.
3. If none of the above is found, then all PCC Visits in the year prior to the Audit date are scanned for a non-DNKA, non-Refraction visit to an Optometrist or Ophthalmologist (24, 79, 08) or an Optometry or Ophthalmology Clinic (17, 18, or A2). If found, then the value 1 - Yes is assigned and an indication of what was found is displayed. Refraction is defined as a POV on the visit of: [DM AUDIT REFRACTION DXS]. DNKA is defined as any visit with a primary purpose of visit with a provider narrative containing the following phrases: DNKA, DID NOT KEEP APPOINTMENT, DID NOT KEEP APPT.
4. If none of the above are found, the value 2 - No is assigned.
DENTAL EXAM

The logic used in determining if a dental exam has been done is as follows:
1. A documented DENTAL EXAM (CODE 30) is searched for in the year prior to the Audit date. If found, the value 1 - Yes is assigned and no other processing is done.
2. A visit to clinic 56 - DENTAL clinic that is not a DNKA is searched for in the year prior to the Audit date. If found, and there is any ADA code other than 9991, then it is assumed the exam was done, the value 1 - Yes is assigned and no other processing is done.
3. A visit on which a dentist (provider class code 52 - DENTIST) that is not a DNKA visit is searched for in the year prior to the Audit date. If found, and there is any ADA code other than 9991, then it is assumed the exam was done, the value 1 - Yes is assigned and no further processing is done.
4. A visit on which a CPT code from the BGP DENTAL VISIT CPT CODES taxonomy was recorded. If found, then it is assumed the exam was done, and the value 1 - Yes is assigned.

If none of the above are found, the value 2 - No is assigned.

DEPRESSION AN ACTIVE PROBLEM

The patient's problem lists in both PCC and the Behavioral Health module are reviewed for any problem with a code that is contained in the BGP MOOD DISORDERS taxonomy; or for the following Behavioral Health problem codes: 14, 15.

If no problem is found on the problem list then the PCC and BH systems are reviewed for at least 2 diagnoses (POV's) of the codes listed above in the year prior to the Audit date.

If either a problem is found on the problem list or 2 POV's are found then the value assigned is 1 - Yes. If not, then a value of 2 - No is assigned.

DEPRESSION SCREENING

This item is only reviewed if depression was not found on the problem list and the patient is not currently being seen for depression. (See item DEPRESSION AS AN ACTIVE PROBLEM)

The PCC and Behavioral health databases are reviewed for any of the following documented in the past year:

Exam 36 or Behavioral Health Module Depression Screening.

Diagnosis - V POV V79.0 (NOTE: there are no ICD10 codes used).

Measurements PHQ2, PHQ9, PHQT.

Behavioral Health Module Diagnosis (POV) of 14.1.

Diagnosis in the BGP MOOD DISORDERS taxonomy used as a Purpose of Visit.

Diagnosis in the BGP MOOD DISORDERS taxonomy used as a Purpose of visit in the Behavioral Health system.

Problem Code of 14 or 15 used as a Purpose of Visit in the Behavioral Health system.
Health system.
CPT codes 1220F, 3725F or G0444 in PCC or Behavioral Health.
If any of the above is found then a value of 1 - Yes is assigned. If not, then a value of 2 - No is assigned.

NUTRITION INSTRUCTION
The values for the Audit are:
1 RD
2 Other
3 Both RD & Other
4 None

All visits in the year prior to the Audit date are examined. Chart review visits are skipped (service category of C or clinic code of 52).
- If the primary provider on any visit is a DIETITIAN or NUTRITIONIST (codes 29, 07 or 34) then RD is assigned.
- If the visit does not have one of the above providers but has a Diagnosis of [BGP DIETARY SURVEILLANCE DXS] then Other is assigned.
- If the visit has a CPT documented of 97802, 97803, or 97804 then RD is assigned.
- If the visit contains any of the following education topics
  Topic in the DM AUDIT DIET EDUC TOPICS taxonomy or any
    Topic ending in -N
    Topic ending in -DT
    Topic ending in -MNT
    Topic beginning with MNT-
    Topic beginning with DNCN-
The V PAT ED entry is examined and if the provider documented in that entry is a Dietitian or Nutritionist the RD is assigned if the provider is blank or not a dietitian/nutritionist then Other is assigned.

At this point:
- if RD is assigned and Other is not then the value assigned is 1 - RD.
- if RD and Other is assigned then the value assigned is 3 - Both RD & Other.
- if Other is assigned and RD is not then the value assigned is 2 - Other.

Processing stops if a value is assigned.
If none of the above is documented, the value 4 - None is assigned.

PHYSICAL ACTIVITY INSTRUCTION
All visits in the year prior to the Audit date are examined. If there is a visit on which a patient education topic in the DM AUDIT EXERCISE EDUC TOPICS taxonomy, or any topic ending in "-EX" is documented then a 1 - Yes value is assigned. No further processing is done.

All visits in the year prior to the Audit date are examined for a POV of V65.41 (there are no ICD10 codes) and if one is found a 1 - Yes is assigned.

If none of the above is documented, the value is 2 - No
All education topics documented in the year prior to the Audit date are examined. If any topic meets the following criteria then the value assigned is 1 - Yes:
- topic does not end in -EX, -N, -DT or -MNT
- topic does not begin with MNT-
- topic is a member of the DM AUDIT EDUC TOPICS taxonomy OR the topic begins with one of the following:
  - DM- (e.g. DM-L)
  - DMC- (e.g. DMC-L)
  - an ICD Diagnosis code that is a member of the SURVEILLANCE DIABETES taxonomy (e.g. 250.00-L, E10.51-L)
  - a Diabetes SNOMED code (e.g. 46635009-L)

If none of the above is documented, the value is 2 - No

**DIABETES THERAPY**

For each of the categories of medications listed below, the following logic is used to determine if the patient is currently taking the medication:

1. Looks for any PCC V Medication entry for any drug in the taxonomy of drugs being searched for where the visit date of the V Medication is in the 6 months prior to the Audit date. (Looking to see if the patient had at least 1 fill in the past 6 months.)

2. If no V Medication is found the Prescription file (file 52) is searched for any drug in the taxonomy of drugs being searched for. The prescription number must begin with an X (an X indicates that the prescription was e-prescribed). If the prescription begins with an X the following calculation is done:
   - days supply times (# of refills +1) (this is the total number of days the prescription covers)
   - # of days calculated above + issue date (this is the last date the prescription covers)
   - If the date calculated above is greater than the Audit date minus 180 days it is assumed the patient was taking that medication in the 6 months prior to the end of the Audit date

3. If no medications are found in searches 1 and 2 above the system will look for any EHR Outside Medication that fits into one of medication categories. EHR Outside Medications are found in the V Medication file and have a value in the EHR Outside Medication field and no discontinued date. The system will go back 10 years to find one of these medicatons. It is assumed that a medication entered as an EHR Outside Medication is active until it is discontinued.

If any medication in the taxonomy specified is found, then an 'X' is placed by the therapy name and a value of 1 - Yes is entered in the Audit Export file. If no medications are found then the None of the following item is marked with an 'X' and a value of 1 - Yes is entered in the Audit Export file for this item while a value of 2 - No is entered for all other therapy items.

<table>

SGLT-2 inhibitors                        DM AUDIT SGLT-2 INHIBITOR DRUG

ACE INHIBITOR OR ARB
The taxonomy used to find ACE Inhibitors is DM AUDIT ACE INHIBITOR.

If any drug in the above listed taxonomy is found using the logic
detailed below a value of 1 - Yes is assigned, no further processing is
done.

1. Searches for any PCC V Medication entry for any drug in the taxonomy
   of drugs being searched for where the visit date of the V Medication is in
   the 6 months prior to the Audit date.  (DM Audit is looking to see if the
   patient had at least 1 fill in the past 6 months.)

2. If no V Medication is found the Prescription file (file 52) is
   searched for any drug in the taxonomy of drugs being searched for.  The
   prescription number must begin with an X (an X indicates that the
   prescription was e-prescribed). If the prescription begins with an X the
   following calculation is done:
   - days supply times (# of refills +1)  (this is the total number of
days the prescription covers)
   - # of days calculated above + issue date (this is the last date
   the presciption covers)
   - If the date calculated above is greater than the Audit date
     minus 180 days it is assumed the patient was taking that medication
     in the 6 months prior to the end of the Audit date

3. If no medications are found in searches 1 and 2 above the system will
   look for any EHR Outside Medication that fits into one of medication
   groups.  EHR Outside Medications are found in the V Medication file and
   have a value in the EHR Outside Medication field and no discontinued
date. The system will go back 10 years to find one of these medicatons.
   It is assumed that a medication entered as an EHR Outside Medication is
   active until it is discontinued.

4. The Non-VA meds component in the pharmacy patient file is reviewed for
   any drug in the above mentioned taxonomies or an orderable item whose
   first 7 characters is "ASPIRIN" and whose 8th character is not a "/".

If no relevant drugs are found then a 2 - No is assigned.

ASPIRIN/ OTHER ANTIPLATELET/ANTICOAGULANT THERAPY
Two taxonomies are used to find Aspirin and Other
Antiplatelet/Anticoagulant therapy:  DM AUDIT ASPIRIN DRUGS or DM AUDIT
ANTIPLT/ANTICOAG

If any drug in the above listed taxonomies is found using the logic
detailed below a value of 1 - Yes is assigned, no further processing is
done.

1. Searches for any PCC V Medication entry for any drug in the taxonomy
   of drugs being searched for where the visit date of the V Medication is in
   the 6 months prior to the Audit date.  (DM Audit is looking to see if the
patient had at least 1 fill in the past 6 months.)

2. If no V Medication is found the Prescription file (file 52) is searched for any drug in the taxonomy of drugs being searched for. The prescription number must begin with an X (an X indicates that the prescription was e-prescribed). If the prescription begins with an X the following calculation is done:
   - days supply times (# of refills +1) (this is the total number of days the prescription covers)
   - # of days calculated above + issue date (this is the last date the prescription covers)
   - If the date calculated above is greater than the Audit date minus 180 days it is assumed the patient was taking that medication in the 6 months prior to the end of the Audit date

3. If no medications are found in searches 1 and 2 above the system will look for any EHR Outside Medication that fits into one of medication groups. EHR Outside Medications are found in the V Medication file and have a value in the EHR Outside Medication field and no discontinued date. The system will go back 10 years to find one of these medications. It is assumed that a medication entered as an EHR Outside Medication is active until it is discontinued.

4. The Non-VA meds component in the pharmacy patient file is reviewed for any drug in the above mentioned taxonomies or an orderable item whose first 7 characters is "ASPIRIN" and whose 8th character is not a "/".

If no relevant drugs are found then a 2 - No is assigned.

STATIN THERAPY
One taxonomy is used to find Statin therapy: BGP PQA STATIN MEDS

If any drug in the above listed taxonomy is found using the logic detailed below a value of 1 - Yes is assigned, no further processing is done.

1. Searches for any PCC V Medication entry for any drug in the taxonomy of drugs being searched for where the visit date of the V Medication is in the 6 months prior to the Audit date. (DM Audit is looking to see if the patient had at least 1 fill in the past 6 months.)

2. If no V Medication is found the Prescription file (file 52) is searched for any drug in the taxonomy of drugs being searched for. The prescription number must begin with an X (an X indicates that the prescription was e-prescribed). If the prescription begins with an X the following calculation is done:
   - days supply times (# of refills +1) (this is the total number of days the prescription covers)
   - # of days calculated above + issue date (this is the last date the prescription covers)
   - If the date calculated above is greater than the Audit date minus 180 days it is assumed the patient was taking that medication in the 6 months prior to the end of the Audit date

3. If no medications are found in searches 1 and 2 above the system will look for any EHR Outside Medication that fits into one of medication groups. EHR Outside Medications are found in the V Medication file and have a value in the EHR Outside Medication field and no discontinued date. The system will go back 10 years to find one of these medications. It is assumed that a medication entered as an EHR Outside Medication is
active until it is discontinued.

Statin Allergy defined as:
Adverse drug reaction/documented statin allergy defined as any of the following: 1) ALT and/or AST > 3x the Upper Limit of Normal (ULN) (i.e. Reference High) on 2 or more consecutive visits during the Audit Period; 2) Creatine Kinase (CK) levels > 10x ULN or CK > 10,000 IU/L during the Report Period; 3) Myopathy/Myalgia, defined as any of the following during the Report Period: POV ICD-9: 359.0-359.9, 729.1, 710.5, 074.1; ICD-10: G71.14, G71.19, G72.0, G72.2, G72.89, G72.9, M35.8, M60.80-M60.9, M79.1; 4) any of the following occurring anytime through the end of the Report Period: A) POV ICD-9: 995.0-995.3 AND E942.9; B) "Statin" or "Statins" entry in ART (Patient Allergies File); or C) "Statin" or "Statins" contained within Problem List or in Provider Narrative field for any POV ICD-9: 995.0-995.3, V14.8; ICD-10: Z88.8.

Test Definitions:
ALT: Site-populated taxonomy DM AUDIT ALT TAX or the BGP ALT LOINC taxonomy.
AST: Site-populated taxonomy DM AUDIT AST TAX or the BGP AST LOINC taxonomy.
Creatine Kinase: Site-populated taxonomy BGP CREATINE KINASE TAX or the BGP CREATINE KINASE LOINC taxonomy.

Statin Intolerance/Contraindication defined as:
Contraindications to Statins defined as any of the following: 1) Pregnancy (see definition below); 2) Breastfeeding, defined as POV ICD-9: V24.1; ICD-10: Z39.1 or breastfeeding patient education codes BF-BC, BF-BP, BF-CS, BF-EQ, BF-FU, BF-HC, BF-ON, BF-M, BF-MK, or BF-N during the Report Period; 3) Acute Alcoholic Hepatitis, defined as POV ICD-9: 571.1; ICD-10: K70.10, K70.11 during the Report Period; or 4) NMI (not medically indicated) refusal for any statin at least once during the Report Period.

CVD
CVD diagnosis (using DM AUDIT CVD DIAGNOSES taxonomy) is searched for on the patient's problem list. If a diagnosis is found, a 1 - Yes is assigned.
If no problem is found on the problem list, then the V POV file is searched for the following, if found, a 1 - Yes is assigned along with the visit date on which the item was found:

- One diagnosis ever of any code in the BGP CABG DXS taxonomy. The codes are:
  - Z95.1 (ICD-10) Presence of aortocoronary bypass graft
  - V45.81 (ICD-9) AORTOCORONARY BYPASS

- One diagnosis ever of any code in the BGP PCI DXS taxonomy. Codes are:
  - V45.82 (ICD-9) STATUS-POST PTCA
  - Z95.5 (ICD-10) Presence of coronary angioplasty implant and graft
  - Z98.61 (ICD-10) Coronary angioplasty status

- Two diagnoses ever of any code in the DM AUDIT CVD DIAGNOSES taxonomy.

- One procedure ever documented of any code in the BGP PCI CM PROCS taxonomy.

- One procedure ever documented of any code in the BGP CABG PROCS taxonomy.

- One CPT procedure ever documented of any code in the BGP PCI CM CPTS taxonomy.

- One CPT procedure ever documented of any code in the BGP CABG CPTS taxonomy.

If none of the above are found, a value of 2 - No is assigned.

**TB TEST DONE**

The type of TB Test done is determined in the following way:

1. If the patient has a TB health factor recorded, TB on the problem list or any diagnosis of TB documented in the PCC then the test type is assigned as 1 - Skin Test (PPD), no further processing is done.

2. All recorded PPD entries and TB lab tests using the DM AUDIT TB LAB TESTS TAX prior to the Audit date are gathered. If at least one is found the latest one is used, if it is a Skin test then 1 - Skin test (PPD) is assigned, if it is a lab test then 2 - Blood Test is assigned.

3. If no TB test is found then the value is 3 - UNKNOWN/NOT OFFERED.

**TB TEST RESULT**

If a TB test was done, the test result is determined in the following way:

1. If the patient has a TB health factor recorded, TB on the problem list or any diagnoses of TB documented in the PCC then the test result is assigned as 1 - Positive, no further processing is done. Taxonomy Used is DM AUDIT TUBERCULOSIS DXS.

2. All recorded PPD entries and TB lab tests using the DM AUDIT TB LAB TESTS TAX prior to the Audit date are gathered. If at least one is found the latest one is used, if it is a Skin test and the reading or result is Positive (reading >9) then it is assigned as 1 - Positive, if reading or result of last PPD is negative, then the values is 2 - Negative, if the test type is a blood test then the value of the test is examined, if it is Positive then 1 - Positive is recorded, if it is negative then 2 - Negative is assigned. If the results are null the value 3 - Unknown/Not offered is assigned.

3. If no result is found then the value assigned is 3 - Unknown/not
TB RESULT POSITIVE, ISONIAZID TX COMPLETE
If the value of the TB Test result is POSITIVE then the last TB health factor is looked at for determining TB Treatment status. The last recorded TB Health factor is displayed. The TB Health factors are: TB - TX COMPLETE, TB - TX INCOMPLETE, TB - TX UNKNOWN, TB - TX UNTREATED, TB - IN PROGRESS.

The value assigned is based on the last recorded health factor:
- TX COMPLETE: 1 - Yes
- TX INCOMPLETE: 2 - No
- TX UNTREATED: 2 - No
- TX IN PROGRESS: 2 - No
- TX UNKNOWN: 3 - Unknown

TB RESULT NEGATIVE, TEST DATE
If the value of TB test result is NEGATIVE then the date of the last TB test is displayed.

HEPATITIS C - HCV Diagnosis Ever
The Purpose of Visits are scanned for any diagnosis ever contained in the BGP HEPATITIS C DXS taxonomy. If one is found the value of 1 - Yes is assigned, if no diagnosis is found the Problem List is scanned for a diagnosis contained in the BGP HEPATITIS C DXS taxonomy or a SNOMED contained in the PXRM HEPATITIS C snomed list. If that is found on the problem list a value of 1 - Yes is assigned, if not found a value of 2 - No is assigned.

HEPATITIS C - BORN 1945-1965 SCREENED EVER
If the patient has a diagnosis of Hepatitis C this item is skipped. If the patient is not born between 1945 and 1965, a value of 3 - Not born 1945-1965 is assigned.

Hepatitis C Screening (Ab Test) is determined by the following: CPT 86803; BGP HEP C TEST LOINC CODES taxonomy; site-populated lab test taxonomy BGP HEP C TEST TAX.

The V LAB file is scanned for any test contained in the lab test and LOINC taxonomies. The V CPT file is scanned for CPT 86803.

If a lab test or CPT code is found a value of 1 - Yes is assigned. If a lab test or CPT code is not found a value of 2 - No is assigned.

RETINOPATHY (DIAGNOSED EVER)
If retinopathy is on the problem list or the patient has had at least 1 visits with a diagnosis of retinopathy ever, then it is assumed that they have been diagnosed with retinopathy and a value of 1 - Yes is assigned. Otherwise, a value of 2 - No is assigned.

Taxonomy used: DM AUDIT RETINOPATHY DIAGNOSES
SNOMED List: DIABETIC RETINOPATHY

INFLUENZA VACCINE DURING AUDIT PERIOD
The patient's data is scanned for an influenza vaccine in the 12 months offered.
prior to the Audit date. Influenza vaccine is determined by:
- Immunization CVX codes: See BGP FLU IZ CVX CODES taxonomy
- CPT codes: BGP CPT FLU
- Diagnosis codes: BGP FLU IZ DXS (there are no ICD10 codes)

If any of the above is found, a value of 1 - Yes is assigned.

If no documented immunization is found, a search is done for a
documented refusal in the Audit period. If one is found, then a value of 3
- Refused is assigned.

If neither of the above are found, a value of 2 - No is assigned.

PNEUMOCOCCAL VACCINE EVER
Data is scanned for pneumococcal vaccine any time prior to the Audit
date. A pneumococcal vaccine is determined by:
- Immunization CVX codes: 33, 100, 109, 133, 152
- Diagnoses: V03.82 (there are no ICD10 codes)
- CPT codes: BGP PNEUMO IZ CPTS taxonomy (90669, 90670, 90732, G0009, G8115, G9279)

If any of the above is found, a value of 1 - Yes is assigned.

If none is found, the refusal file is checked for a documented refusal of
this vaccination. Refusals documented in both the PCC and the
Immunization register are reviewed. If one is found, then a value of 3 -
Refused is assigned.

If neither of the above is found, a value of 2 - No is assigned.

Td or Tdap IN PAST 10 YEARS
Immunizations are scanned for any tetanus vaccine in the 10 years prior
to the Audit date. Logic used to find a TD vaccine:
Immunization CVX codes : 1, 9, 20, 22, 28, 35, 50, 106, 107, 110, 112,
113, 115, 120, 130, 132, 138, 139
CPT Codes: APCH TD CPT
LOW VALUE: 90698 HIGH VALUE: 90698
LOW VALUE: 90700 HIGH VALUE: 90701
LOW VALUE: 90702 HIGH VALUE: 90702
LOW VALUE: 90703 HIGH VALUE: 90703
LOW VALUE: 90714 HIGH VALUE: 90714
LOW VALUE: 90715 HIGH VALUE: 90715
LOW VALUE: 90718 HIGH VALUE: 90718
LOW VALUE: 90720 HIGH VALUE: 90723

If any of the above is found, a value of 1 - Yes is assigned.

If none is found, the refusal file is checked for a documented refusal of
this vaccination. Refusals documented in both the PCC and the
Immunization register are reviewed. If one is found, then a value of 3 -
Refused is assigned.

If neither of the above is found, a value of 2 - No is assigned.

Tdap EVER
Immunizations are scanned for a Tdap vaccine ever. A Tdap vaccine is
determined by:
CVX code 115
CPT code 90715

If either of the above is found, a value of 1 - Yes is assigned.

If none is found, the refusal file is checked for a documented refusal of this vaccination. Refusals documented in both the PCC and the Immunization register are reviewed. If one is found, then a value of 3 - Refused is assigned.

If neither of the above is found, a value of 2 - No is assigned.

HEPATITIS B 3-DOSE SERIES EVER
Data is scanned for hepatitis B vaccine any time prior to the Audit date. HEP B vaccination is determined by:
CVX codes 8, 42, 43, 44, 45, 51, 102, 104, 110, 132, 146
CPT codes contained in the BGP HEPATITIS CPTS taxonomy: 90636, 90723, 90731, 90740, 90743, G0010, Q3021, Q3023

Vaccinations must be given at least 20 days apart. If three are found, a value of 1 - Yes is assigned.

If less than three vaccines found, the system will look for an Immune Contraindication in the Immunization contraindications file. If it is found, a value of 4 - Immune is assigned.
The system then looks for evidence of disease: Problem List or V POV of [BGP HEP EVIDENCE] Taxonomy. If it is found, a value of 4 - Immune is assigned.

If three vaccinations are not found and immunity or evidence of disease is not found, the system searches for a refusal documented in the past year. If one is found, then a value of 3 - Refused is assigned.
Refusal definitions: Immunization Package refusal or PCC refusal of the above listed CVX or CPT codes.

If none of the above are found, a value of 2 - No is assigned.

A1C
All lab tests in the V LAB file in the year prior to the Audit date are found using the DM AUDIT HGB A1C TAX taxonomy and the BGP HGBA1C LOINC CODES taxonomies. Only tests that have a result are used, if the result of the V LAB is blank, contains "CANC" or contains "COMMENT" the V Lab is skipped.

Individual Audit: The date and result of test are displayed.
Cumulative Audit:
If the result contains a ">" it goes into the 11.0 or higher category.
If the result contains a "<" it goes into the <7.0 category.
At this point everything is stripped from the result value except for numbers and ".". If after stripping, what is left is something other than a number then it is put in the "Not tested or no valid result" category.
If what is left is a numerical value, it is put in the appropriate category(ies) below:
HbA1c <7.0
HbA1c 7.0-7.9
HbA1c 8.0-8.9
HbA1c 9.0-9.9
HbA1c 10.0-10.9
HbA1c 11.0 or higher
Not tested or no valid result
HbA1c <8.0
HbA1c >9.0

Audit Export (Data) File: When exported, all characters that are not a number or a "." are stripped from the result value, so if the value is <7.0 what is exported is 7.0.

TOTAL CHOLESTEROL
The last lab test with a result in the year prior to the Audit date that is a member of the DM AUDIT CHOLESTEROL TAX taxonomy or the BGP TOTAL CHOLESTEROL LOINC taxonomy is found in V LAB.

Cumulative Audit: This result is not used.

Audit Export (Data) File: All characters other than numbers and "." are stripped from the result value and that value is then rounded to the closest whole number and truncated to a total of 3 characters with 0 decimal digits.

HDL CHOLESTEROL
The last lab test with a result in the year prior to the Audit date that is a member of the DM AUDIT HDL TAX taxonomy or the BGP HDL LOINC CODES taxonomy is found in V LAB.

Cumulative Audit:
The result of the test is examined and is put into the following categories by gender. If the result is blank OR the first digit of the result is not a number, then it is put in the "Not tested or no valid result" category. For example, if the value is "cancelled", it will fall into "Not tested or no valid result".

In females
HDL <50 mg/dl
HDL >=50 mg/dl
Not tested or no valid result
In males
HDL <40 mg/dl
HDL >=40 mg/dl
Not tested or no valid result

Audit Export (Data) File:
All characters that are not numbers or "." are stripped from the result value and that value is then rounded to the closest whole number and truncated to a total of 3 characters with 0 decimal digits.

LDL CHOLESTEROL
The last lab test with a result in the year prior to the Audit date that is a member of the DM AUDIT LDL CHOLESTEROL TAX taxonomy or the BGP LDL LOINC CODES taxonomy is found in V LAB. Tests with a result containing "CANC" are ignored.

Cumulative Audit:
The result of the test is examined and is put into the following categories. If the first digit of the result is not a number, then it is put in the "Not tested or no valid result" category. For example, if the value is "UNK", 
it will fall into "Not tested or no valid result".

LDL <100 mg/dl
LDL 100-189 mg/dl
LDL >=190
Not tested or no valid result

Audit Export (Data) File: All characters that are not numbers or "." are stripped from the result value and that value is then rounded to the closest whole number and truncated to a total of 3 characters with 0 decimal digits.

TRIGLYCERIDES
The last lab test with a result in the year prior to the Audit date that is a member of the DM AUDIT TRIGLYCERIDE TAX taxonomy or the BGP TRIGLYCERIDE LOINC CODES taxonomy is found in V LAB. Only tests with a result are used, tests with a result containing "CANC" or "COMMENT" are also skipped.

Cumulative Audit:
The result of the test is examined and is put into the following categories. If the result is blank OR the first digit of the result is not a number then it is put in the "Not tested or no valid result" category. For example, if the value is "cancelled", it will fall into "Not tested or no valid result".

TG <150 mg/dl
TG 150-499 mg/dl
TG 500-999 mg/dl
TG >=1000 mg/dl
Not tested or no valid result

Audit Export: All characters other than numbers and "." are stripped from the result value and that value is then rounded to the closest whole number and truncated to a total of 3 characters with 0 decimal digits.

SERUM CREATININE
The last lab test with a result in the year prior to the Audit date that is a member of the DM AUDIT CREATININE TAX taxonomy or the BGP CREATININE LOINC CODES taxonomy is found in V LAB. All tests with a result containing "CANC" are skipped.

Specimen types are not examined so if the same creatinine test is used for serum creatinine as for urine creatinine, the Audit is unable to distinguish between these values.

Result reporting:
For the individual Audit, the actual value that is in V LAB is displayed. For the cumulative Audit: This item is not reported. For the Audit Export (Data) File: All characters other than numbers and "." s are stripped from the result value and that value is truncated to a total of 4 characters with two decimal digits.

eGFR (ESTIMATED GFR)
For patients that are 18 or older, the last lab test in the year prior to the Audit date that is a member of the BGP GPRA ESTIMATED GFR TAX or the BGP ESTIMATED GFR LOINC taxonomy is found.

For the individual Audit, the actual value that is in V LAB is displayed.
If there is no estimated GFR found in V LAB but there is a creatinine value found the Estimated GFR is calculated using the Modified Diet in Renal Disease (MDRD) formula for eGFR.

For the cumulative Audit:
If the first character of the value is ">" it goes into >=60 ml/min. Otherwise, all characters other than numbers and "," are stripped from the result value. The resulting value is placed in the following categories:
- >=60
- 30-59
- 15-29
- <15
- Not tested or no valid result

Audit Export (Data) File: All characters other than numbers or "," are stripped from the result value and that value is truncated to a total of 4 characters with 1 decimal digit.

QUANTITATIVE URINE ALBUMIN CREATININE RATIO (UACR)
The system looks for a test contained in the DM AUDIT QUANT UACR lab taxonomy or DM AUDIT A/C RATIO LOINC taxonomy, if found and the test has a valid numeric result then the patient is assigned a value of 1 - Yes for UACR Done. The result of the test is assigned to UACR value.

If the test found does not have a valid numeric result then the system will look for a urine microalbumin test on the same visit date. If found, the result of that test is evaluated. If the result contains a < symbol or the words "less than," a value of 5 is assigned to UACR value. If the result contains a '>' symbol or contains the words "greater than" a value of 999 is assigned to UACR value.

COMBINED OUTCOMES MEASURE
Assessed only for patients 40 years of age and older. The combined outcome measure displays a 1 - Yes on the Audit if the patient had all of the following during the Audit period: A1c < 8.0, statin prescribed, and mean BP <140/<90. Otherwise a value of 2 - No is assigned.

Note: This item is not included in the Audit Export (Data) File.

e-GFR and UACR
Assessed only for patients 18 years of age and older. For those who had both an e-GFR and a UACR test during the Audit period, a value of 1 - Yes is assigned. Otherwise a value of 2 - No is assigned.

Note: This item is not included in the Audit Export (Data) File.

COMORBIDITY
Comorbidity count is determined by how many of the following problems or conditions each of the patients has:
- Active depression
- Current tobacco use
- Severely obese (BMI 40 or higher)
- Diagnosed hypertension
- Diagnosed CVD
- CKD: eGFR<60 or UACR=>30 mg/g
- Hepatitis C
- Retinopathy

Figure A-1: DM Audit logic descriptions
Appendix B: Audit Export (Data) File Definition

IHS Diabetes Care and Outcomes Audit for 2018
Audit Data Export File Format

General Description:
Delimited text file, using a caret (^) as the delimiter. If a data value is missing, a space should appear between the delimiters (e.g., ^ ^).

Line 1 is the variable name line and contains the audit variables in the order that they appear below.

Lines 2–x will contain the data, with each line representing a single record.

Table B-1: Variable List
