Preface

The Health Summary package integrates clinical data from DHCP ancillary packages into patient health summaries which can be viewed online or printed as reports. Version 2.7 includes several new components and features, including Patient Care Encounter (PCE) components.

This manual is intended to be used as a technical reference guide for IRM Service, ADPACs, and Clinical Coordinators.

NOTE: This manual has been revised to describe changes that have been made, through patches, to Health Summary V. 2.7 since its release in 1994.

Introduction to Health Summary

Definition of a Health Summary

A health summary is a user-customized, clinical summary report consisting of patient information *components*. Each component presents the most currently available summary data from one of the ancillary packages listed below, for a given patient, with optional limits by time, number of occurrences, and selection items. These summaries can be viewed online or printed.

Packages Providing Data

- Automated Med Info
- Exchange (AMIE)
- Allergy Tracking System
- Clinical Reminders
- Consults
- Dietetics
- Discharge Summary
- Inpatient Medications
- Lab
- Medicine
- Mental Health
- Nursing (Vital Signs)
- OE/RR (Order Entry/Results Reporting
- Outpatient Pharmacy
- Patient Care Encounter (PCE)
- Problem List
- Progress Notes
- Radiology
- Registration
- Scheduling
- Social Work
- Surgery
- VISTA Imaging

Components and Types

Components and their behavior are specified by records in the Health Summary Component file (142.1). When a “permanent” Health Summary is created, its *type*, as defined by the owner/creator, is saved in the Health Summary Type file (142).

Introduction

Printing Health Summaries

Permanent or pre-defined health summaries may be run or printed for a single patient or all patients at a given hospital location (Patient Health Summary and Hospital Location Health Summary options). If a clinic or operating room location is selected (instead of a ward) in the Hospital Location Health Summary option, the user will be prompted to enter a beginning and ending visit or surgery date. Only those patients with visits or surgeries scheduled for the specified date will have health summaries generated.

PDX Transmission of Health Summaries

Health Summaries (except components with selection items or unique local components) can be transmitted by PDX–Patient Data Exchange–which transfers patient data between VA facilities using the MailMan electronic mail utility. See PDX V. 1.5 documentation for more information.
New Features in Health Summary

Some of the more recent patches are described below. For complete descriptions of all of the changes in Health Summary since the release of version 2.7 in 1994, please refer to the patches (described briefly on following pages and in more detail in the Patch module on Forum).

New Components

CM   Reminder Maintenance
CMB  Reminder Brief
CR   Reminders Due
CRS  Reminders Summary
GAF  Global Assess Funct
MAGI MAG Imaging
NSR  NON OR Procedures
SCD  Spinal Cord Dysfunct
SII  Sel Image Impression
SNSR Selected NON OR Proc
SPN  Selected Prog Notes
SR   Surgery Rpt (OR/NON)
SVSO Vital Select Outpat.
VSD  Detailed Vitals
VSO  Vital Signs Outpat.

Renamed Components

Patches GMTS*2.7*29 and GMTS*2.7*48

Health Summary patches 29 and 48 export components for using Remote Data Views. With all the proper patches installed, you may view remote patient data through CPRS. Before you can do this, you must have Master Patient Index/Patient Demographics (MPI/PD) and several other patches installed. Once these are in place and the proper parameters have been set, you can access remote data from other VA facilities.

Currently, remote data views are limited to predefined, nationally exported Health Summary Types. Remote data may not be viewed by either the Ad Hoc Health Summary type or locally/user developed Health Summary types.

You can view remote clinical data using any Health Summary Type that has an identically named Health Summary Type installed at both the local and remote sites. However, for non-nationally exported health summary reports, the content of the report is subject to the report structure and configuration defined at the remote site.

Patch 29 (GMTS*2.7*29) adds the following Remote Data Views types:

REMOTE DEMO/VISITS/PCE (3M)
REMOTE MEDS/LABS/ORDERS (3M)
REMOTE TEXT REPORTS (3M)
REMOTE CLINICAL DATA (3M)
REMOTE CLINICAL DATA (1Y)
REMOTE DEMO/VISITS/PCE (1Y)
REMOTE MEDS/LABS/ORDERS (1Y)
REMOTE TEXT REPORTS (1Y)
REMOTE CLINICAL DATA (4Y)
REMOTE LABS LONG VIEW (12Y)
REMOTE LABS ALL (1Y)
REMOTE LABS ALL (3M)
REMOTE DIS SUM/SURG/PROD (12Y)
REMOTE OUTPATIENT MEDS (6M)
REMOTE ONCOLOGY VIEW

See Chapter 3, section 2 in the Health Summary User Manual for more information on using Remote Data Views.
The purpose of this patch is to allow the Health Summary components 'Progress Notes' and 'Selected Progress Notes' to display the new interdisciplinary progress notes and all of the entries associated with the interdisciplinary note. The interdisciplinary note and all of the associated entries will be marked in the progress note components as follows:

<table>
<thead>
<tr>
<th>Note Type</th>
<th>Marked as</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary Note:</td>
<td>Interdisciplinary Note</td>
</tr>
<tr>
<td>Addendum to Primary</td>
<td>Interdisciplinary Note (addendum)</td>
</tr>
<tr>
<td>Child Note</td>
<td>Interdisciplinary Note Entry</td>
</tr>
<tr>
<td>Addendum to Child</td>
<td>Interdisciplinary Note Entry (addendum)</td>
</tr>
</tbody>
</table>

Patch GMTS*2.7*47

A menu of options has been added, CPRS Reports Tab “Health Summary Types List,” that allows users to control the Health Summary Types and the order that the Health Summary Types are listed in the Health Summary Types box on the Reports Tab of CPRS. This menu option has four menu items to edit and display the users’ preferences.

Patch GMTS*2.7*49

A menu of options has been added, “CPRS Health Summary Display/Edit Site Defaults,” that allows IRM/Managers to control which Health Summary Types are on the reports tab and the order that the Health Summary Types appear in for the site. These site defaults will be used for users who do not have personal preferences set. This menu has four menu items to edit and display defaults for the site.

<td>CREATING A COMPACT DISPLAY FOR SIGN OUT SHEETS</td>
<td>The Health Summary Expert Panel Discussed this on Feb. 29, 1996. The Health Summary package was developed to provided data by patient. It wasn't set up to be a report generator. The format for a Health Summary Type and components was specified by the EP and through test sites. Health Summary was never meant to provide an avenue to input data into a chart copy. Its purpose is to display the data that exist for a patient based upon which components are included in a health summary type. This issue has been discussed before. It get to the point of what should Health Summary be? Should it also be a report generator? This issue was taken to the CARG for resolution and as far as we know, the CARG has never provided the EP with a resolution.</td>

# Health Summary Implementation & Maintenance

The Health Summary Maintenance Menu contains the following options for implementing and maintaining Health Summary.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Disable/Enable Health Summary Component</strong></td>
<td>Selectively enable or disable Health Summary Components. A disable action may be identified as either temporary or permanent. When a component is temporarily disabled, an “OUT OF ORDER MESSAGE” may be entered and displayed with the component. When permanently disabled, the component is not displayed.</td>
</tr>
<tr>
<td><strong>Create/Modify Health Summary Components</strong></td>
<td>Create/modify new Health Summary components, either by duplication and renaming of existing components or by entering all appropriate fields for a component created on-site.</td>
</tr>
<tr>
<td><strong>Edit Ad Hoc Health Summary Type</strong></td>
<td>Enter/edit a component's default parameters (Time and Occurrence limits, Selection Items, Hospital Location Displayed, ICD Text Displayed, Provider Narrative Displayed, Header names, and whether to print component headers if no data is available), or delete components of the Ad Hoc Health Summary Type.</td>
</tr>
<tr>
<td><strong>Rebuild Ad Hoc Health Summary Type</strong></td>
<td>Reloads the Ad Hoc Health Summary Type with ALL (previously defined) components, including any defined by the site, and, optionally, all DISABLED components sequenced alphabetically by name. Disabled components will not be displayed, but when they are re-enabled will automatically show up in the Ad Hoc Health Summary if they are included in the rebuild.</td>
</tr>
<tr>
<td><strong>Resequence a Health Summary Type</strong></td>

</tbody>
</table>
| **Create/Modify Health Summary**  | **Type**  
Create a new or modify an existing health summary type. New types created by this option automatically define the type’s owner as the creator, unless the creator holds the GMTSMGR security key. If the creator has this key, the GMTSMGR holder may designate anyone as the owner. |
| **Edit Health Summary Site**  | **Parameters**  
Edit four Health Summary parameters to local specifications:  
1) PROMPT FOR ACTION PROFILE: editing this parameter to YES allows users to be prompted for printing a patient’s Outpatient Pharmacy Action Profile in tandem with a health summary.  
2) INCLUDE BAR CODE ON ACTION PROFILES: editing this parameter to YES allows bar codes to be printed with Action Profiles.  
3) INCLUDE COMMENTS ON LABS: editing this parameter to YES causes comments to be printed in the Chemistry and Hematology, the Lab Test Selected, and the Lab Cumulative components.  
4) SPOOL DEVICE: specify spool device name to which Health Summary output can be directed during a PDX request. |
Set Up Site Parameters

Use the Edit Health Summary Site Parameters option in the Health Summary Maintenance Menu [GMTS IRM/ADPAC MAINT MENU] to review and set up the site parameters. These parameters allow users to:

- Print an Outpatient Pharmacy Action Profile in tandem with a Health Summary.
- Print bar codes when Action Profiles are printed.
- Present Lab comments at display indicating comments are available for the Lab Chemistry and Hematology, the Lab Cumulative Selected, and the Lab Tests Selected components, or present the !! symbol to indicate comments are available for the Chemistry and Hematology and Lab Tests Selected components.
- Specify a spool device where PDX requests will be stored.

See example on next page.
Example

Select Health Summary Maintenance Menu Option: 7  Edit Health Summary Site Parameters

Select HEALTH SUMMARY PARAMETERS: ?

ANSWER WITH HEALTH SUMMARY PARAMETERS NAME:

HOSPITAL

YOU MAY ENTER A NEW HEALTH SUMMARY PARAMETERS, IF YOU WISH
NAME MUST BE HOSPITAL

Select HEALTH SUMMARY PARAMETERS: HOSPITAL

PROMPT FOR ACTION PROFILE: YES// ??

If this parameter is set to Y or YES, the user will be prompted to include the Outpatient Pharmacy Action Profile when printing Health Summaries by location (both interactive and batch mode) and by patient.

CHOOSE FROM:

Y  yes
N  no

PROMPT FOR ACTION PROFILE: YES// Y  YES

INCLUDE BAR CODES ON ACTION PROFILES: ?

Enter YES to include bar codes when Action Profiles are printed by Health Summary

Choose from:

Y  yes
N  no

INCLUDE BAR CODES ON ACTION PROFILES: YES// <RET>  YES

INCLUDE COMMENTS FOR LABS: YES// ??

If this parameter is set to Y or YES, the Chemistry & Hematology, the Lab Tests Selected, and the Lab Cumulative Selected components will present comments for results. For the Chemistry & Hematology and the Lab Tests Selected components, the comments will be displayed immediately following the results. For the Lab Cumulative Selected components, a lower-case letter will be displayed to the left of the date for entries with comments. Comments will be displayed after all the results are displayed, with the comments linked by the lower-case letter. Up to 26 comments can be included.

If blank, N or NO, the Chemistry & Hematology and the Lab Tests components will present the symbol "!!" next to tests which include comments, and a footnote referring the user to the Lab Interim Report.

CHOOSE FROM:

Y  yes
N  no

INCLUDE COMMENTS FOR LABS: YES// <RET>  YES

SPOOL DEVICE: SPOOL// ??

This is the SPOOL DEVICE to which Health Summary output can be directed during a PDX request for one or more Health Summary components.

Choose from:

SPOOL  SPOOL TO VMS  DSAB:[MUMPS,DEVNGR]

SPOOL DEVICE : SPOOL

Select HEALTH SUMMARY PARAMETERS: <RET>
Ad Hoc Health Summaries

Temporary (ad hoc) health summaries can be created “on-the-fly” and run for individual patients, as follows:

1. First, select a combination of components from a menu of all available components.
2. Next, (if applicable) specify time limits, occurrence limits, hospital location, ICD text display, provider narrative display, and selection items for any of the components, or accept site-defined defaults.
3. Then, select a patient and run the resulting health summary.

Both pre-defined and ad hoc health summaries may be run interactively on your terminal, or directed to any printer. Pre-defined health summary types can also be queued to run nightly for all patients at any specified location(s). Either interactive or batch-mode print-by-location health summaries may also be printed “in tandem” with the Outpatient Pharmacy Action Profile (including bar codes) for each of the patients at the selected location.

CPRS Interface

Health Summary V. 2.7 interfaces with the Computerized Patient Record System (CPRS) to provide Order Entry users with an integrated view of both orders (from CPRS) and results (from Health Summary). This interface, in turn, enhances Health Summary by allowing Health Summary users:

- Multiple Patient Selection.
  You can select multiple patients from ward, clinic, treating specialty, attending physicians, personal or team lists. Health Summary uses enhanced patient look-up routines in CPRS for reporting results.

Relationship to Integrated Billing’s Encounter Form Utilities

The Integrated Billing package (Encounter Form Utilities) includes a Print Manager that allows sites to define reports that should print along with encounter forms for a specific clinic or division and for specified appointments. One of the options, “Define Available Health Summary,” allows a health summary to be made available for use by the print manager. See the IB Encounter Form Utilities User Manual for further information.
Nightly Batch Processing

The Health Summary package allows coordinators to schedule batch processing of health summaries for patients in a particular ward, or to schedule batch processing of health summaries a specified number of days before patients are scheduled for clinic visits or operating rooms. The benefits of batch processing are:

1) It enables the clinic to have the most currently available clinical information when the patient arrives for the appointment, and

2) Processing of the prints takes place during non-peak computer hours.

To use this feature the IRM Service must first use the option Schedule/Unschedule Options on the the TaskMan menu, and schedule the GMTS TASK STARTUP option to initiate nightly batch printing. (See page 31 in the Health Summary Installation Guide.) Each time this option runs, it uses the parameters set up by the Health Summary Coordinator in the Set up Batch Print Locations option. For Version 2.7 of Health Summary, this option has been updated to recognize non-workdays. For clinics and operating rooms, if it is set up to print two days in advance, Tuesday’s clinics will print on Friday rather than on Sunday. If Tuesday happens to be a holiday, the Wednesday clinics will print on Friday.

Health Summary Components Headers and Abbreviations

Use the Information Menu option (available in all three Health Summary user menus) to get an online listing of the information contained in each health summary component or health summary type.

Customized Health Summary Types

A user with access to the Coordinator’s or Enhanced menu can create a customized health summary type. Use the Create/Modify Health Summary Type menu option located on the Health Summary Enhanced Menu or the Build Health Summary Type submenu of the Health Summary Coordinator’s menu. Select the desired components, and (depending on the data required by the selected components) apply time limits or maximum occurrence limits to components which are date-sensitive. You may also apply ICD text, provider narrative, selection items, and header names for components that allow these to be specified.

Users who do not have access to the enhanced or coordinator's menus can request a customized health summary type from their IRMS or Health Summary coordinator. The
form entitled “Request for Health Summary Type,” located in Appendix A of the *Health Summary User Manual*, is a convenient way to submit such requests.

**Customizing the Ad Hoc Health Summary Type**

You can also customize the Ad Hoc Health Summary Type with the Edit Ad Hoc Health Summary Type option on the Maintenance Menu. This option lets you modify time and/or occurrence limits, hospital location displayed, ICD text displayed, provider narrative displayed, header names, or assign selection items (tests like WBC, Glucose) to the *selected* health summary components (Lab Cumulative Selected, Lab Cumulative Selected 1-4, Lab Tests Selected, Measurement Selected, Vital Signs Selected, and Radiology Impression Selected, etc.). Consult with your clinical coordinator and/or users about which selection items they would like to have on their Health Summaries.

You may select individual components and edit their default parameters, or use the ^LOOP feature at the Select COMPONENT: prompt to loop through all of the components, editing the default values as you go.

**NOTE:** When selecting components from the Ad Hoc Health Summary menu, entering “ALL” allows all components to be selected. If the first three characters of a HEADER NAME for a component are designated as “All,” however, then only the defined component will be selected. Avoid conflicts and loss of functionality by not using “all” at the front of new header names.

**Edit Ad Hoc Health Summary Type Example**

**NOTE:** Bold-faced text indicates user entries.

ICD TEXT DISPLAYED: ??
This field controls how ICD text is displayed in components where ICD Text applies (e.g., PCE Outpatient Encounters, PCE Outpatient Diagnosis and Problem List All). The applicable component display/print can be customized to include ICD Text in the following format: code and long description, code and short description, code only, long description only or nothing. This control is independent of whether provider narrative is displayed -- either or both may be specified.

Choose from:
- **L** long text
- **S** short text
- **C** code only
- **T** text only
- **N** none

**ICD TEXT DISPLAYED:** S short text

**PROVIDER NARRATIVE DISPLAYED:** ??

This field controls whether provider narrative is displayed or not. It applies to components where provider narrative is applicable (e.g., PCE Outpatient Encounters, PCE Outpatient Diagnosis, Problem List All). This control is independent of whether or not ICD text is displayed -- either or both may be specified. If not specified, provider narrative will be displayed by default.

Files and Globals List
The Health Summary Overall Menu [GMTS MANAGER] contains four menus:

1. Health Summary Menu [GMTS USER]
2. Health Summary Enhanced Menu [GMTS ENHANCED USER]
3. Health Summary Coordinator’s Menu [GMTS COORDINATOR]
4. Health Summary Maintenance Menu [GMTS IRM/ADPAC MAINT MENU]

Assign these menus as follows:

1. Give the Health Summary Menu [GMTS USER] menu to users who only need to print or display health summaries.

2. Give the Health Summary Enhanced Menu [GMTS ENHANCED USER] menu to users who need to create, modify, or delete their own health summary types, in addition to printing health summaries.

3. Give the Health Summary Coordinator’s Menu [GMTS COORDINATOR] menu to users who need to print or display health summaries, and who will also need to create, modify, or delete health summary types, and set up nightly batch printing at specified locations.

4. Give the Health Summary Maintenance Menu [GMTS IRM/ADPAC MAINT MENU] to IRM staff or the Clinical Coordinator for any implementation and maintenance issues in Health Summary. This menu contains options to disable/enable health summary components for selection/display, create/modify new health summary components, edit and rebuild the Ad Hoc Health Summary Type, resequence the components in a health summary type, create/modify a health summary type, delete a health summary type, and edit health summary site parameters.

5. If an IRM staff member or the Clinical Coordinator needs access to all menus, give the Health Summary Overall Menu [GMTS MANAGER] to those users rather than assigning each menu option separately.
Menus and Options

Health Summary Overall Menu [GMTS MANAGER]

   5 Resequence Allowable Entities for HS List [GMTS GUI SITE RESEQUENCE]

Function
Health Summary exports a function called GMTS COMPONENT NAME. It is used for writing the HEADER NAME, DEFAULT HEADER NAME, or COMPONENT NAME in Health Summary reports.
Cross-References

The number-space for Health Summary files is 142*. Use the VA FileMan DATA DICTIONARY UTILITIES, option #8 (DILIST, List File Attributes), to print a list of these files. Depending on the FileMan template used to print the list, this option will print out all or part of the data dictionary for the GMTS files. If you choose the “Standard” format, you can see cross-reference information for a specified file(s):
Archiving
The Health Summary package does not provide archiving functionality because data is only stored for the Health Summary Type (#142), Health Summary Component (#142.1), and Health Summary Parameters (#142.99) files.

The Health Summary package does not duplicate storage of VISTA ancillary package data. Data is extracted as needed from the ancillary packages, is temporarily stored in ^TMP(<namespace>$J$, or ^UTILITY($J$, and is deleted after the component has been printed or displayed.

Purging
The Delete Health Summary Type option [GMTS TYPE DELETE] is available on both the Coordinator’s and the Enhanced menus. The owner of a health summary type may delete it.

Privacy Act laws specifically state that patient information in VISTA which is retrievable by patient identifier is part of the patient medical record. Printed Health Summary information is patient information that is retrievable by patient identifier, and is considered part of the patient record. However, since the information on the Health Summary can be found elsewhere in the patient record, administrators in a Medical Center can choose whether or not to file hard copies of health summaries in the medical record. If you choose to file copies in the medical record, be aware that information in a health summary is only a summary and may not be complete in many cases.
Callable Routines

Health Summary does not provide any publicly supported entry points. Included below is a list of entry points that are used by the Health Summary package. Use of these entry points by other packages requires a private Data Base Integration Agreement (DBIA) with Health Summary.

Routine: GMTS: *Health Summary Main Routine*

<table>
<thead>
<tr>
<th>Entry Point</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENCWA</td>
<td>Entry point for printing without going through Health Summary print options and a pre-defined health summary type. Receives: DFN as valid patient internal entry number GMTSPRM = “CD, CN,CW,ADR”. These are valid component abbreviations from the “C” cross reference of File 142.1. Does not support components that require selection items. GMTSTITL=“Text of Title” GMTSPX1 - Optional internal FM date for range ending date GMTSPX2 - Optional internal FM date for range beginning date NOTE: Optional date range variables are both required if a date range is desired. Returns: Health Summary report for a patient and the specific components defined in GMTSPRM.</td>

External Relations

Non-destructive, read-only component routines have been written to present VISTA ancillary package data.

Database Integration Agreements

The Health Summary package interacts with, and extracts data from many other VISTA software packages. Permission for Health Summary to use data from the other packages is obtained by completing a written integration agreement with each of the other packages. Complete integration agreements are under the DBA menu on Forum.
Internal Relations

All Health Summary options are independently invokable.

**Other Kernel Print Options**

Besides using the Kernel Installation & Distribution (KIDS) options to get lists of routines, files, etc., you can also use other Kernel options to print online technical information.

**Routines**

The namespace for the Health Summary package is GMTS. Use the Kernel option, List Routines [XUPRROU], to print a list of any or all of the Health summary routines. This option is found on the Routine Tools [XUPR-ROUTINE-TOOLS] menu on the Programmer Options [XUPROG] menu, which is a sub-menu of the Systems Manager Menu [EVE] option.

**Example:**

<table>
<thead>
<tr>
<th>Select Systems Manager Menu Option:</th>
<th>programmer Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Select Programmer Options Option:</td>
<td>routine Tools</td>
</tr>
<tr>
<td>Select Routine Tools Option:</td>
<td>list Routines</td>
</tr>
<tr>
<td>Routine Print</td>
<td></td>
</tr>
<tr>
<td>Want to start each routine on a new page: No/ &lt;RET&gt;</td>
<td></td>
</tr>
<tr>
<td>routine(s) ? &gt; GMTS*</td>
<td></td>
</tr>
</tbody>
</table>

The first line of each routine contains a brief description of the general function of the routine. Use the Kernel option, First Line Routine Print [XU FIRST LINE PRINT], to print a list of just the first line of each Health Summary subset routine.

**Example:**

<table>
<thead>
<tr>
<th>Select Systems Manager Menu Option:</th>
<th>programmer Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Select Programmer Options Option:</td>
<td>routine Tools</td>
</tr>
<tr>
<td>Select Routine Tools Option:</td>
<td>First Line Routine Print</td>
</tr>
<tr>
<td>PRINTS FIRST LINES</td>
<td></td>
</tr>
<tr>
<td>routine(s) ? &gt; GMTS*</td>
<td></td>
</tr>
</tbody>
</table>
Globals

The globals used in the Health Summary package are:

^GMT(142,
^GMT(142.1
^GMT(142.98,
^GMT(142.99,

Use the Kernel option, List Global [XUPRGL], to print a list of any of these globals. This option is found on the Programmer Options menu [XUPROG], which is a sub-menu of the Systems Manager Menu [EVE] option.

Example:

Select Systems Manager Menu Option: programmer Options
Select Programmer Options Option: LIST Global
Global ^GMT*

Inquire To Option File

The Kernel Inquire option [XUINQUIRE] provides the following information about a specified option(s):
- Option name.
- Menu text.
- Option description.
- Type of option.
- Lock (if any).

In addition, all items on the menu are listed for each menu option.

XINDEX

XINDEX is a routine that produces a report called the VA Cross-Referencer. This report is a technical and cross-reference listing of one routine or a group of routines. XINDEX provides a summary of errors and warnings for routines that do not comply with VA programming standards and conventions, a list of local and global variables and what routines they are referenced in, and a list of internal and external routine calls.

XINDEX is invoked from programmer mode: D ^XINDEX.
When selecting routines, select GMTS* and exclude the routines GMTSI* (the inits), GMTSON* and GMTSO0* (the onits).
Data Dictionaries/ Files

The number-spaces for Health Summary files are 142-. Use the VA FileMan DATA DICTIONARY UTILITIES, option #8 (DILIST, List File Attributes), to print a list of these files. Depending on the FileMan template used to print the list, this option will print out all or part of the data dictionary for the GMTS files.

List File Attributes

The FileMan List File Attributes option [DILIST] lets you generate documentation about files and file structure. If you choose the “Standard” format, you can see the following Data Dictionary information for a specified file(s):
- File name and description.
- Identifiers.
- Cross-references.
- Files pointed to by the file specified.
- Files that point to the file specified.
- Input templates.
- Print templates.
- Sort templates.

Example:

>DP^DI
VA FileMan 21.0
Select OPTION: DATA DICTIONARY UTILITIES
Select DATA DICTIONARY UTILITY OPTION: LIST FILE ATTRIBUTES
START WITH WHAT FILE: 8925 (1 entry)
GO TO WHAT FILE: 8925// 8926*
Select LISTING FORMAT: STANDARD// [Enter]
DEVICE: PRINTER

In addition, the following applicable data is supplied for each field in the file: field name, number, title, global location, description, help prompt, cross-reference(s), input transform, date last edited, and notes.

The “Global Map” format of this option generates an output that lists all cross-references for the file selected, global location of each field in the file, input templates, print templates, and sort templates.
?, ??, and ??? Online Help

? Enter one question mark to see helpful information about the components of the health summary type used in the health summary and the options available.

specified appointments. One of the options, “Define Available Health Summary,” allows a Health Summary to be made available for use by the print manager. See the IB Encounter Form Utilities User Manual for further information.

**Lock**

Restricts edit access for a given health summary type to the holders of any valid security key. For example, the GMTSMGR key is required to edit summary types that are locked by the GMTSMGR lock.

**Non-destructive**

Health Summary components are non-destructive, meaning that the Health Summary package does not edit the data from the DHCP package where it extracts its information.

**Occurrence Limits**

The number of past occurrences that will be reported on a health summary (e.g., the last five occurrences).

**Owner**

The creator of a health summary type. Owners and holders of the GMTSMGR security key have sole access to modify their health summary type(s).

**Provider Narrative Displayed**

For some components, when this flag is enabled and a provider enters narrative text, the text will be displayed.

**Summary Order**

The order in which components appear in a health summary, as defined by the creator of a Summary Type.

**Summary Type**

The structure or template containing defined components and the unique characteristics with occurrence and time limits, and selection items. Used to print health summaries for patients.

**Time Limits**

The time period of reference included on a health summary for a particular component (e.g., 2D, 1M, 1Y for two days, one month and one year).

**VISTA**

The name for the VHA program responsible for installing an integrated computer system in all VHA medical facilities.
Appendix A—Defining New Components

We encourage sites to submit E3Rs for new components (or enhancements to existing components) that they believe will be useful on a national basis. The Health Summary Expert Panel (EP) will evaluate these requests. If the EP approves the request, these new components will be provided as patches or in a future version of the Health Summary package, depending on the priority that is given to the request.

Sites have the option to create new components for Health Summary to provide for their site-specific needs. This may be an enhancement to one of the components that Health Summary provides, it can be a totally new one that accesses DHCP data that Health Summary currently doesn’t provide a component for, or it can be one to access non-DHCP supported (Class III software) packages.

NOTE: Please be aware that locally created components are not supported by National VISTA Service (NVS) or Systems Design and Development (SD&D).

A Health Summary basket has been set up on SHOP,ALL where sites can put their locally developed component routines, in order to share this information with the rest of the DHCP community. We encourage you to take a look at what has already been done, as this may save you some time.

To access SHOP,ALL from FORUM:
1. Enter SHOP,ALL at your menu prompt and you’ll be “logged” on to SHOP,ALL.
2. Enter SURROGATE NAME: SHOP,ALL.
3. Select Mailman Option: Read Mail.
4. Enter the Health Summary mail basket.

We would also like you to add any components you have created locally to SHOP,ALL.
**Format for Adding Components to SHOP,ALL**

If you have components you would like to share, please use the following instructions/format:

1. Start the subject of the message with:

   HS Vx.x -- brief subject/component name, where x.x will be the version

2. Include a description, sample of the report, and the routines to produce the report. The routine should be under the name-space assigned to your station; e.g., Madison=ALW, Cincinnati=AFR. Send to: SHOP,ALL@ISC-CHICAGO.VA.GOV

3. The message will go to the IN Basket at SHOP,ALL. The SHOP,ALL administrators will read the IN basket daily and save the message to a basket called Health Summary.

**Hints for Developing local site components:**

Before writing your own components, review some of the existing routines that have been written. Some good examples are the Patient Care Encounter, the Discharge Summary, or the Compensation and Pension components with the display routines in the Health Summary name space and the extract routines in the custodial package’s name-space. We suggest that when creating new components you write two separate routines, one to extract the data and one to display the data. The display routine will call the extract routine and then display the data that was extracted.

Put any local routines you develop in your site’s routine name-space.

Local site components will be entered into the Health Summary Component (File #142.1) file with an internal file number beginning with your site number plus an additional 3 digits (e.g. At Salt Lake VAMC the first number would be 660001). This is to assure that nationally developed components are not overlaid by local site-developed components or vice versa. You will be prompted with a valid number when you enter a new component via the Create/Modify Health Summary Components option on the Health Summary Maintenance Menu.

For the extract routine, we recommend that you set the data to the $^\text{TMP("name",$J)}$ global. The display routine will get the data from this global and display/print it. For the extract routine, you call it with the DFN (Patient Internal File Number) variable. Optionally, you could set it up for time and occurrence limits. GMTSEND (Fileman date to be used as the ending date for displaying data, GMTSBEG (Fileman date to be used as the starting date for displaying data, etc.):
used as the beginning date for displaying data, and GMTSNDM (Maximum number of
occurrences to display) are the variables to use to allow for time and occurrence limits.
In your extract routine, make sure the date of the data is between the dates in the
GMTSBEG and GMTSEND variables. Use the GMTSNDM variable to make sure
you only get the maximum number of records that were entered for the occurrence
limits.

Depending on how the cross-references are set up in the file you are extracting data
from, you may want to use the reverse $ORDER M command or a cross-reference
with an inverted Fileman date to get the most recent data first. When putting the data
into the $TMP global, you can invert the date (9999999-Date) as one of the subscripts.
Or you can just include the date. When displaying the data, you will need to use the
Reverse $ORDER M command to get the most recent data to display first, if you don’t
use an inverted date subscript.

NOTE: Inverted Fileman dates mean that the date (e.g. 2950630) will be subtracted
from 9999999. This would give you 7049369. Inverted Fileman dates are used to order the
data from most recent data to oldest data. With the Reverse $ORDER command, this
convention won’t necessarily need to be followed in the future. Prior to the Reverse
$ORDER M command, it was necessary to put the retrieved data in the $TMP array with
a subscript in Inverted Fileman Date/time in order that the user would see the most
current data first in the Health Summary display.

Once you have extracted the data, you can print or display it. To allow for page breaks
(and in the interactive display the capability to terminate or jump to another component),
it is important that you issue the following commands before printing a line of data:

   D CKP$GMTSUP Q:$D(GMTSQIT)

If this isn’t done before each line is written, the length of the document may exceed the
length of the page or screen. You also will not get the component header to display
before displaying the data. It is important that no lines are written and the above
commands are not issued if there is no data. For version 2.7 of Health Summary we
implemented the capability to suppress component headers and “No Data Available”
messages for Health Summary Types. In order to make this work, the CKP$GMTSUP
routine was updated to set a flag that data was printed for a component. After the
Health Summary driver processes each component for a Health Summary Type, the
system checks to see if data was displayed for the component. If no data was
displayed, the driver determines whether or not to display the component header and
“No Data Available” messages.

NOTE: For any local site components that were written prior to version 2.7, if you want
to be able to suppress component headers and “No Data Available” messages, you will
need to evaluate them and remove calls to BREAK$GMTSUP. This command should not
be executed within your routines and you should not display the message that there was
no data available. You also want to be sure not to execute CKP^GMTSUP until you have data to display.

**Setting up a component to allow selection of specific items:**

If you want to set up a component to allow selection of specific items, review one of the existing components that allows this capability, then follow these steps:

1. Add “GMTS” to the Application Group field for the file you want to select items from. You can do this through Fileman with the Edit File option under the Utility Functions option.
2. Add the pointed to file to the variable pointer Selection Item (field #4) sub-field in the multiple Structure (Field #1) field in the Health Summary Type (file #142) file. Do this through Fileman with the Modify File Attributes option.
3. When entering a new component to the Health Summary Component (file #142.1), be sure to enter the File to the Selection Item field. This can be done through the Create/Modify Health Summary Components option on the Health Summary Maintenance Menu.
4. In your application code, access the GMTSEG variable to determine the Selection Items for the file. The format of this array is GMTSEG(GMTSEGN,file number,Selection Item internal file number). GMTSEGN is the internal file number for the component. You can $ORDER on the third subscript of the array and get the Selection Item’s internal file number. In your extract routine you will then limit the extract to only retrieve records for the specified Selection Items.

**NOTE:** Typically, users at sites should not modify files. However, in order to include new components with selection items, it is necessary to modify a file’s structure. Therefore, we recommend extreme caution while following the procedures above.
Create/Modify Health Summary Components

The following sample dialogue can assist you in creating your own local health summary components.

NOTE: When selecting components from the Ad Hoc Health Summary menu, entering “ALL” allows all components to be selected. If the first three characters of a HEADER NAME for a component are designated as “All,” however, then only the defined component will be selected. Avoid conflicts and loss of functionality by not using “all” at the front of new header names.

Select Health Summary Maintenance Menu Option: 2 Create/Modify Health Summary Components

Select COMPONENT: CHEM 7
Are you adding 'CHEM 7' as a new HEALTH SUMMARY COMPONENT? Y (Yes)
HEALTH SUMMARY COMPONENT NUMBER: 5000001//
Do you wish to duplicate an existing COMPONENT? YES//

NAME: CHEM 7// <RET>
ABBREVIATION: CH7
DESCRIPTION: . . .

Please note: This component contains information extracted from the Lab package. Not
only do time and maximum occurrence limits apply to this component, but the user is allowed to select any number of atomic Lab tests. Data presented include: collection date/time, specimen, test names with results and reference flags in columnar (horizontal) format. Comments will also be conditionally displayed, depending on the value of the DISPLAY COMMENTS ON LABS Health Summary Site Parameter. When comments are displayed, a lower case letter will be displayed to the left of the date for entries with comments. Comments will be displayed after all the results are displayed with comments being linked by the lower case letter. Up to 26 comments can be included.

EDIT Option: <RET>

PRINT ROUTINE: MAIN;GMTSLRSC

This is the entry point and routine to be called when the component is run for a given health summary type. Enter the line label, followed by a semi-colon, followed by the routine name (e.g., MAIN;GMTSLRC).

PRINT ROUTINE: MAIN;GMTSLRSC <RET>

TIME LIMITS APPLICABLE: yes // ??

This field is set up by the programmer to indicate whether the routine to print this component will allow a time range to be applied to the data to be displayed in the Health Summary.

Choose from:

HOSPITAL LOCATION APPLICABLE: ??

This field is used by the programmer to indicate whether the routine which prints this component is set up to handle the display of the hospital location abbreviation on the Health Summary.

Choose from:
Y yes

HOSPITAL LOCATION APPLICABLE: <RET>

ICD TEXT APPLICABLE: ??

This field is used by the programmer to indicate whether the routine which prints this component is set up to handle the display of standardized ICD text on the Health Summary.

Choose from:
Y yes

ICD TEXT APPLICABLE: <RET>

PROVIDER NARRATIVE APPLICABLE: ??

This field is used by the programmer to indicate whether the routine which prints this component is set up to handle the display of the provider narrative on the Health Summary.

Choose from:
Y yes

PROVIDER NARRATIVE APPLICABLE: <RET>

LOCK: ??

To be used for components such as psychology test results

Restricts viewing access under Print Health Summary Menu

LOCK: <RET>

DEFAULT HEADER NAME: ??
The DEFAULT HEADER NAME will appear in menus and component headers in preference to the COMPONENT NAME, but NOT in preference to the local HEADER NAME, if it is defined for that component within a given Health Summary Type. If defined the local HEADER NAME will have precedence within a given Health Summary Type.

DEFAULT HEADER NAME: Chem 7
Select SELECTION FILE: ??

Choose from:
LABORATORY TEST

Enter the names or numbers of the files from which selection items (e.g., lab tests (file 60), radiology procedures (file 71), or vital signs (file 120.51)) may be chosen for this component.
Choose from:

60 LABORATORY TEST
71 RADIOLOGY PROCEDURES
120.51 VITAL TYPE
811.9 PCE REMINDER/MAINTENANCE ITEM
9001017 HEALTH SUMMARY MEAS PANEL
9999999.64 HEALTH FACTORS

Select SELECTION FILE: 60 LABORATORY TEST
...OK? Yes// <RET> (Yes)

SELECTION FILE: LABORATORY TEST //<RET>
SeleCtion COUNT LIMIT: ??
Enter the MAXIMUM number of selection items which may be selected for
any single appearance of this component in a given health summary type.
That is, a value of 7 will allow the user to select as many as seven
items, etc.
SELECTION COUNT LIMIT: 7
Select SELECTION FILE: <RET>

ADD new Component to the AD HOC Health Summary? NO// y YES

>>> EDITING the GMTS HS ADHOC OPTION Health Summary Type
SUPPRESS PRINT OF COMPONENTS WITHOUT DATA: ??
This field allows health summary types to be set up to suppress printing
of components that contain no data when health summaries are printed from
a device. When health summary types are displayed on the screen,
components that contain no data will still be displayed with a "No data
available" message. This is done to eliminate any confusion that may
occur when jumping between components.
Choose from:
Y yes
N no
SUPPRESS PRINT OF COMPONENTS WITHOUT DATA: y yes

Do you wish to review the Summary Type structure before continuing? NO// <RET>
Select COMPONENT: CHEM 7/<RET> CH7
SUMMARY ORDER: 395/<RET> 395
OCCURRENCE LIMIT: 5
TIME LIMIT: 21d
HOSPITAL LOCATION DISPLAYED: y yes
ICD TEXT DISPLAYED: ??
Indicate whether the long form, short form, code only, text only, or no
form of ICD diagnosis text should appear in applicable components.
Choose from:
L long text
S short text
C code only
T text only
N none
ICD TEXT DISPLAYED: c code only
PROVIDER NARRATIVE DISPLAYED: y yes
HEADER NAME: Chem 7/<RET>

No selection items chosen.
Select new items one at a time in the sequence you want them displayed.
You may select up to 7 items.

Select SELECTION ITEM: CHEM 7

Searching for a LABORATORY TEST CHEM 7
...OK? Yes// <RET> (Yes)

Select the tests which you wish to include, in the
sequence in which you wish them to appear.

-- CHEM 7 --

1 CREATININE 5 CHLORIDE
2 UREA NITROGEN 6 CO2
3 SODIUM 7 GLUCOSE
4 POTASSIUM 8 ANION GAP

Select 1 - 7 LAB TEST(s): 1-7// 1-5,8 CREATININE UREA NITROGEN SODIUM
POTASSIUM CHLORIDE ANION GAP

Select SELECTION ITEM:

Appendix B—Health Summary Security

Health summaries produced by this package are highly confidential and should be treated with the same security precautions as a patient’s medical record.

Menu Access

The Health Summary Overall Menu [GMTS MANAGER] contains four menus:

1. GMTS USER
2. GMTS ENHANCED USER
3. GMTS COORDINATOR
4. GMTS IRM/ADPAC MAINT MENU

Assign these menus as follows. (See the Health Summary User Manual for complete user descriptions of menus and options):

1. Give the Health Summary Menu [GMTS USER] menu to users who only need to print or display health summaries.

2. Give the Health Summary Enhanced Menu [GMTS ENHANCED USER] menu to users who need to create, modify, or delete their own health summary types, in addition to printing health summaries.

3. Give the Health Summary Coordinator’s Menu [GMTS COORDINATOR] menu to users who need to print or display health summaries, and who will also need to create, modify, or delete health summary types, and set up nightly batch printing at specified locations.

4. Give the Health Summary Maintenance Menu [GMTS IRM/ADPAC MAINT MENU] to IRM staff or the Clinical Coordinator for any implementation and maintenance issues in Health Summary. This menu contains options to disable/enable health summary components for selection/display, create/modify new health summary components, edit and rebuild the Ad Hoc Health Summary Type, resequence the components in a health summary type, create/modify a health summary type, delete a health summary type, and edit health summary site parameters.
Security

Security is established via a combination of the GMTSMGR and GMTS VIEW ONLY security keys and the OWNER and LOCK fields in File 142 (Health Summary Type file).

GMTSMGR Security Key:

The GMTSMGR security key allows holders to override the LOCK and OWNER access restrictions for editing health summary types. The IRM Chief and Health Summary Coordinators are likely holders of this key.

This security key allows the holder to edit general usage health summary types which are locked with the GMTSMGR key. It also provides master edit access to all other health summary types.

GMTS VIEW ONLY Security Key:

The GMTS VIEW ONLY key allows holders to view a health summary on the CRT. Holders may use all of the familiar Health Summary options but will not be prompted for a device for printing paper copies of the health summary.

Health Summary Type File

Owner

Owners of health summary types have edit access to health summary types they have created. The owner is designated when a health summary type is created. Usually the creator of a health summary type is automatically designated as its owner. However, if creators of health summary types hold the GMTSMGR key, they may designate another person as the owner. If you are assigned the GMTSMGR key, you are not automatically designated as the owner. You may, however, enter your name as the “owner.”

Lock

This field can be used to specify a security key and is designated when the health summary type is created. This lock gives edit access for that health summary type to anyone who holds the matching security key. For example, someone creating a Pathology Health Summary Type may want to enter LRSUPER as the lock, thereby giving edit access to any holder of the LRSUPER security key. The four health summary types exported with the Health Summary package have the GMTSMGR lock.
A lock does not restrict an owner—the lock gives permission. If a health summary type is locked, the owner of the health summary type is not required to have the key to access it; however, all other users must have the key.

**Health Summary Component File**

**Lock**

You may restrict any component from view by entering the name of a valid security key in the LOCK field for a given component. For example, if your site decides that only holders of the LRSPUSER key should be allowed to view the Surgical Pathology Health Summary component, then entering the name of that security key in the LOCK field of that component’s record will enforce that policy.

**VA FileMan File Protection**

The Health Summary package files are exported with the following file protection provided by VA FileMan:

<table>
<thead>
<tr>
<th>File Number</th>
<th>Name</th>
<th>DD</th>
<th>RD</th>
<th>WR</th>
<th>DEL</th>
<th>LAYGO</th>
<th>AUDIT</th>
