

DEPARTMENT OF HEALTH & HUMAN SERVICES

Public Health Service

---

Indian Health Service  
Rockville MD 20852

November 21, 2008

TO: Deputy Assistant Secretary  
Office for Facilities Management and Policy

FROM: Director  
Division of Facilities Operations

SUBJECT: FY-2008 Energy Report

I am responding to your request for the FY-2008 Energy Report.

Per your direction, these reports are being sent electronically to Mr. Pete Aitcheson, Department of Health and Human Services Energy Officer. The report is organized in the following manner:

- I. IHS Annual Energy Narrative Report
  - A. FY-2008 OPDIV Energy Management Data Report
  - B. FY-2008 OPDIV Excluded Facilities Inventory
  - C. FY-2008 OPDIV Cumulative Metering Schedule

If you have any questions regarding the report, please contact CDR Gordon Delchamps, P.E., Division of Facilities Operations, at (301) 443-1367.

/ James R. Biasco /

James R. Biasco P.E.  
Director, Division of Facilities Operations

# IHS Annual Energy Report

## I. Management and Administration.

### A. Energy Management Infrastructure

#### 1. Senior OPDIV Official

The Senior Agency Official is the Director, Division of Facilities Operations. This person supervises the Agency's Energy Coordinator.

#### 2. OPDIV Energy Team

The Agency Energy Team consists of 12 Area Offices (Aberdeen, Albuquerque, Alaska, Bemidji, Billings, California, Nashville, Navajo, Oklahoma, Portland, Phoenix, Tucson) and 2 Regional Offices (Engineering Service (ES) in Dallas and Seattle). The 12 Area Offices and 2 Engineering Services Offices each have a designated Energy Coordinator who is supervised by the applicable Area Facility Engineer or ES Director.

Area	Energy Coordinator
Aberdeen	Delton Woodford
Albuquerque	Deanne Waconda
Alaska	Gary Kuhn
Bemidji	Peter Hartmann
Billings	Burke Helmer
California	Phil Church
ES-Dallas	Suresh Shah
ES-Seattle	Pedro Valverde
Headquarters	Gordon Delchamps
Nashville	George Styer
Navajo	Nate Morris
Oklahoma	Ken McKenzie
Phoenix	Mike Jensen
Portland	Brian Daily
Tucson	Marc Fleetwood

**Aberdeen:** Delton Woodford, PE, CEM and Kathy Mercure, P.E. (Deputy Director - DFM) with assistance from Keith Oligschlaeger, PE form the core of the Area's Energy Management program. Delton Woodford was selected as the Area's Energy Manager in early summer of 2008 with responsibility for guidance of the Area's Energy Management plan to measure compliance with the objectives and requirements of E.O. 13423, the EPAAct 2005 and MOU and continue development of the Area DFM program to improve energy efficiency, incorporation of energy standards in projects and operations at the service unit level.

**Alaska:** Alaska employs an Area Energy Coordinator to collect and report data to the Tribal Health Organizations (THO's) and IHS Headquarters. The coordinator seeks energy saving program and project opportunities to implement E.O. 13423 and works directly with the THO Facility Managers through the Maintenance and Improvement Resource Allocation Committee (MIRAC) to collect data and implement energy conservation measures and training. The MIRAC determined that funding for completion of energy audits and updates and leaves projects up to the individual THO's to address energy conservation in their hospitals.

**Albuquerque:** The Area Energy Manager coordinates the energy program with the three District Facility Engineers and the Project Managers under the guidance and supervision of the Area Health Facilities Director. The team is responsible for proposing and coordinating energy and energy-related projects. The Energy Manager is responsible for preparing reports and maintaining the utility database. The Facility Engineers are responsible for managing their energy consumption and reporting any improvements, recommendations, or fluctuations.

**Bemidji:** Bemidji Area Energy Team is comprised of 4 members. Bemidji Area Assistant Director Facility Engineering is responsible for entering data compiled by facility managers at three Federal service units.

**Billings:** Burke Helmer, P.E., CFM, Energy Coordinator, assists the facility managers at the service unit level to achieve the requirements of E.O. 13423, EPAAct 2005, and EISA 2007.

**California:** There are no Federally-owned facilities in this Area.

**Nashville:** The Nashville Area team consists of CAPT George Styer and LT Allen Bollinger. Work with the Area Federal facilities to implement E.O. 13423.

**Navajo:** Navajo Area team core members are Jonathan Flannery and Nathaniel Morris. All Facilities Managers are part of the energy team. Area Core team members discuss current functions at the facilities. All information that is received from HQ is funneled through Area Core members to Facility Managers.

**Oklahoma City:** Members of the Area's team are organized in a two-tier structure. The first tier team is located at the Oklahoma City Area Office and consists of two engineers, a General Engineer and a Staff Facilities Engineer. These first tier team members perform the following function to assist the second tier team:

Advocates, tracks and assists the second tier team in the implementation of energy and water conservation measures.

Collects site energy consumption data and Searches for, reviews, digests and selectively shares technology change information pertinent to energy conservation. The goal of the first tier is to give the second tier team the resources it needs to implement E.O. 13423.

The second tier team consists of two Facility Engineers and three Facility Managers that manage 2 hospitals and 7 health care facilities operated by the Indian Health Service. In turn, the Facility Engineers and Managers consult with the maintenance mechanics and electricians. The Tier 2 Team works cooperatively with the Tier 1 team to evaluate their facilities for energy saving opportunities, devise funding strategies to implement feasible energy saving projects and assist with project creation and implementation.

Additional teams that are pulled in for their technical expertise and serve in a cross-functional capacity include contracted architects, engineers and contract specialists. An example of part of the team's interactions with cross-functional teams designated to expedite the implementation of E.O. 13423 and EPAAct 2005 include work with architects and engineers and contractors on pursuit, and attainment, of LEED Silver certification on a project at the Lawton Indian Hospital.

Below are the highlights of some the responsibilities and goals of the Area Energy teams in effort to comply with E.O. 13423:

Ensure that major renovations comply with [http://www.energystar.gov/ia/business/Guiding\\_Principles.pdf](http://www.energystar.gov/ia/business/Guiding_Principles.pdf) (Federal Leadership In High Performance and Sustainable Buildings Memorandum of Understanding).

Report the Lawton Expansion project to the High Performance Federal Buildings Database (<http://www.eere.energy.gov/femp/highperformance/index.cfm>).

Maintain waste prevention and recycling programs in a cost-effective manner.

Designate a recycling coordinator at each facility.

Document proper recovery of refrigerants and become more aware of the EPA Significant New Alternative Policy program (<http://www.epa.gov/ozone/snap/fact.html>) and review and perhaps revise our policies on personal property and building service equipment that contain refrigerants.

Reduce water consumption intensity (intensity meaning gallons per gross square foot of building space and surrounding land) 2% annually and try to document or estimate the quantity.

Purchase WaterSense labeled products (<http://www.epa.gov/watersense/basic/index.htm>).

Reduce energy consumption intensity (intensity meaning energy consumption per gross square foot of building space) 3% annually.

Consider use of the ENERGY STAR® Portfolio Manager rating tool ([http://www.energystar.gov/index.cfm?c=evaluate\\_performance.bus\\_portfoliomanager](http://www.energystar.gov/index.cfm?c=evaluate_performance.bus_portfoliomanager)) to track energy and water use.

Estimate geothermal savings from the Pawnee Health Center Life Cycle HVAC Comparison since this is an on-site thermal renewable.

Facilities personnel, whose actions are affected by this E.O., receive initial awareness training and refresher training.

Submit nominations for worthy awards.

Phoenix: The Energy Officer works with members of the Area Operation Branch to review the requirements of E.O. 13423 with the service units during the Annual General Inspections.

Portland: Team Members:  
Brian Daily – Energy Coordinator  
Mat Martinson - Acting Director Facilities  
PAO Engineering Staff (Facility Managers, Facilities Engineers)  
Portland Area Facilities Board

The Energy Coordinator has the responsibility to understand E.O. 13423 and EPAAct 2005 requirements and to convey the requirements to all other parties. Energy Coordinator carries the responsibility to track energy use and goal achievements. During project development the PAO facility engineering staff will identify future projects to reach energy goals and accomplishments. Approvals of projects are granted by the Facilities Board.

Tucson: The TAO EMS team is Travis Bowser, Magdalena Moreno, Ron Speakman, Charles Craig, and Glenn Hansel are working on improving energy efficiency. Marc Fleetwood and Glenn Hansel will be conducting energy audits this FY.

## **B. Management Tools**

### **1. Awards (Employee Incentive Programs)**

#### HHS Individual Water Management Award -

CDR Michael A. Stover, P.E., Design Engineer Consultant, Whiteriver, Arizona

The White Mountain Apache Tribe in eastern Arizona was facing severe declining water production from their sole source of drinking water. To address the issue, Michael Stover, with the Phoenix Area Indian Health Service, assisted the tribe in the planning and design of a unique two million gallon per day surface water intake and treatment facility.

Two key design components incorporated into this treatment facility by CDR Stover lend themselves for both water and energy conservation. The first, a backwash water recycling component allows recycled water to be delivered to a series of two backwash ponds. There the sediment-laden backwash water is decanted and delivered to a 10 million gallon pre-settling pond for re-use through the treatment process. The recycling of the backwash water eliminates the energy expenditure of pumping the equivalent volume from the river. In addition, the volume of water conserved by recycling the backwash water is used to offset the declining water supply and meet daily demand. The savings estimated at the river booster pumping station are 67 million gallons annually and approximately \$3276.

The second, is the incorporation of a pre-settling pond, which within five days, provides substantial river sediment settling from the water prior to entering the treatment plant. The five day detention time allows the water temperature to rise due to solar heat gain, thereby increasing the efficiency and effectiveness of the plant filters and increased water and energy savings. Not only does the heat gain improve the overall water treatment process by improving coagulation, but it reduces the heating load required inside the water treatment building.

Other water conservation measures designed by CDR Stover include a rainfall collection system that will ensure all rainfall collected from the roof system will be delivered to the pre-settling pond for treatment and distribution. Finally, a meter installation program will be implemented by the tribe to measure and bill both commercial and residential consumers. The increased monitoring will facilitate quick discovery of plumbing leaks and water spikes, and allow IHS and the tribe to achieve greater water and energy savings.

#### HHS Small Group Award

##### Albuquerque Area-wide Roofing Project

Deanne Waconda, Project Engineer/Energy Coordinator  
Paul Clinton, Project Engineer  
Darrell LaRoche, P.E., Director, DHF  
Diane Orf, Architect  
Claude Schleyer, Project Engineer

The Albuquerque Area-wide Roofing Project was initiated with a comprehensive roof condition survey to establish a baseline for various buildings within the Area. This included a thorough inspection of each existing roof system and 23 buildings at six service units were surveyed. A Preventive Maintenance Program and a Roofing Asset Management Program were also developed as a result of the survey.

The reports generated from this survey provided:  
- recommendations for short and long term planning;  
- life cycle cost analysis for repair versus replacement;  
- locations of defects, problems and potential problem areas; and  
- corrective/preventive maintenance program for each building.

The recommendations took into account various roofing materials, energy data, and warranty information. Based on the information and recommendations from these reports, the Area Project Engineer and Architect formulated a list of roof replacement and repair projects.

A contract was established with an A/E firm to provide design services for the roof replacement at the ACL, Zuni, and Santa Fe Indian Hospitals. One of the major requirements was that the R-value of the new roof system be the highest attainable.

The Zuni Hospital reroofing coincided with a major renovation and building expansion project. A new white reflective roofing system increased the R-value from 3.5 to an estimated 10.8. The ACL Hospital used the same roofing system as Zuni and increased its R-value from 3.5 to 7.6. The Santa Fe Hospital also used a roofing system similar to Zuni.

The project decreased annual electric consumption at the ACL Hospital by approximately four percent and decreased natural gas consumption by eight percent. The Santa Fe Hospital has shown a decrease in electric usage of ten percent and natural gas of 20 percent. These decreases have enabled the hospital to increase participation in a renewable energy program from the Public Service Company of New Mexico and the hospital now purchases ten percent of its electricity from wind energy.

#### HHS You Have the Power Energy Champion -

CDR Robin Holden, P.E., Staff Facilities Engineer, Oklahoma City Area Office

Twenty-First Century Citizenship is being led by engineers like CDR Robin Holden, who has enhanced the IHS Oklahoma City Area energy program by implementing efficiency best practices in healthcare facilities with increasing

patient loads; raising energy awareness and conducting education programs; and ensuring energy accountability through on-line utilities monitoring. CDR Holden's efforts have enabled HHS to further reduce and accurately report energy savings and renewable energy use.

- Aberdeen: Two small cash awards were presented to Service Unit Facility Managers that demonstrated the best Energy Use Intensity at our Annual Workshop in April of 2008. The presentation of these cash awards at our Workshop (with all Service Unit Facility Managers in attendance) communicated the Area's commitment to meeting or exceeding the energy conservation and energy efficiency objectives included in the Executive Orders and related laws. We anticipate that the Area will continue recognizing improvement (professional and performance) relating to Energy Conservation at future Facility Management workshops.
- Alaska: ANTHC and/or Tribal Health Organization (THO) employees are not directly compensated for exceptional performance specifically related to E.O. 13423.
- Albuquerque: A DHHS award was presented this year to a team of individuals for their participation in an Area Wide Roofing Project.
- Bemidji: The Bemidji Area did not distribute energy awards for FY-2008.
- Billings: The Billings Area Office has continued with the Energy Awards Program open to all employees within the Billings Area. The program has four different award categories that either an individual or a group of individuals can submit a project for. Three of the awards are cash awards and the fourth is a Service Unit Award that can receive \$25,000 of M&I money to supplement their facility program. All potential award nominations are submitted to the Area Office for review by a registered engineer and must have an attractive Life Cycle Cost Analysis. The projects must then be initiated by the service unit with cooperation by the Area Office. Nominations for the annual HHS Energy and Water Management Awards and DOE's Federal Energy Management Awards are available to all employees for submission.
- California: There are no Federally-owned facilities in this Area.
- Nashville: No awards given in 2008.
- Navajo: No current involvement in employee incentive programs for FY-08.
- Oklahoma City: The Area Office Staff Facilities Engineer was nominated and awarded the HHS Energy Champion Award for 2008.
- The Area Office Energy Team passes on success stories of Facility Manager's productive efforts to their supervisors. Facility Managers are regularly asked to submit examples of exceptional efforts by their maintenance department or by individuals within the department. The Area Office Energy Team stands ready to assist the Facility Manager in preparing and submitting the award paperwork.
- Phoenix: The Area currently has no employee incentive program unique to energy.
- Portland: Awards for facilities management and energy efficiency efforts are encouraged and sought. The Performance Management Appraisal System (PMAP) is the civil service evaluation system that provides awards for exceptional performance. Energy savings is a consideration at all times because saved energy equates to reduced operating costs and increased resources for mission delivery.
- In FY-08 the possibility of an individual or team energy award for the service units was proposed. This incentive is preliminary and discussed amongst the Health Facility Engineering staff. It would require thoughtful format and planning for development in FY-09. The incentive intent is to encourage energy conservation spearheaded by the service units. Detailed criteria would need to be developed on ranking, scoring and evaluating energy conservation award criteria.
- Tucson: No awards planned at this time.

## 2. Performance Evaluations

The performance evaluations of the Senior OPDIV Official and the Agency Energy Coordinator both have cascaded elements from the Director's Performance Contract. These include strategic management of real property and meeting OMB and HHS mandated "Green" Standards for Success.

- Aberdeen: Utilization of employee PMAPs that integrate the requirements of the Executive Orders, the Memorandum of Understanding and the EPAct 2005 has been formalized within the Area's Facilities Management program. The Area's development of an Energy Manager position - which was filled by Delton Woodford in May of 2008 creates a lead professional Certified Energy Manager to support service unit programs, monitor energy utilization, develop projects that will result in energy savings opportunities and facilitate processes that provide project documents that call for products, construction methods and operational practices that integrate energy conservation and sustainability requirements identified in Agency policies and related Federal requirements.
- Alaska: All energy managers are nationally certified and given continuous education to maintain their certification(s).
- Albuquerque: A component was added to the Facility Engineer's duties. The designated Energy Manager also had an energy component added in the performance evaluation.
- Bemidji: Energy management and reporting is included in the position description of the Assistant Director of Facilities Engineering for the Bemidji Area. Evaluations are then based on the performance of those items as listed in the position description.

- Billings: The Deputy Director of Facilities Management currently has the responsibility of Energy Coordinator and all the duties associated with it. The performance of those duties are evaluated by the Director of Facilities Management during his/her annual review.
- California: There are no Federally-owned facilities in this Area.
- Nashville: The performance elements do not cascade to the Area energy team.
- Navajo: There wasn't a performance standard or performance evaluations of energy managers at the Area level for FY-2008. Implementations will begin for FY-2009 to ensure accountability for Area energy managers. This evaluation will continue throughout all that are designated as responsible under E.O. 13423. Will include all facility managers, environmental and energy program managers, contracting officials and inform vehicle fleet managers.
- Oklahoma City: The Area Energy Coordinator has energy conservation and sustainability as critical elements in his HHS Employee Performance Appraisal Plan.
- Phoenix: The Area Energy officer signs off on the cascading energy element for the Area Director.
- Portland: All elements of Real Property Asset Management (including energy efficiency) are cascaded.
- Tucson: The performance elements do not cascade to the Area Facility Engineer.

### 3. Training and Education

#### A. Training and Education - General

The Senior OPDIV Official attended the World Energy Engineering Congress in 2008 and the Agency Energy Coordinator attended GovEnergy 2008. Both also attended miscellaneous energy-related training sessions throughout the year.

- Aberdeen: DFM Development Plans are completed by Area DFM staff annually and staff are encouraged to expand their professional knowledge of technologies (equipment, construction and operations) that will provide for greater levels of energy efficiency in the projects they are responsible for. In 2009 the Area anticipates that one additional DFM engineer will obtain certification as a professional energy manager.
- Alaska: ANTHC maintains professional engineers that are qualified and whom also participate in continuing education in energy related fields. Mechanical and electrical engineers are, and continue to be, encouraged to attend energy related training periodically. ANTHC sends at least one engineer to the ASHRAE conference annually who also seek out the workshop training at the conference, and disseminates this information to other staff members.
- Staff engineers promote energy efficient and alternate energy technologies in the designs and programming documents developed or reviewed through our ongoing infrastructure development in hospitals, healthcare and sanitation facilities.
- The Area Energy Coordinator is a Certified Energy Manager.
- Albuquerque: Training continues to be encouraged and provided. DHF staff participated in a series of one day courses offered through the PNM Energy Academy that ranged from Energy Management, HVAC Principles, and Boilers & Hot Water Systems.
- Facility Engineers and Area staff receive information on ENERGY STAR® products and procurement. DOE and FEMP flyers, posters, and handouts are provided to the service units for their use.
- Bemidji: The Director of Facility Management for the Bemidji Area attended a week long Energy Auditing class in FY-2008. The Bemidji Area also hired a new facility manager in FY-2008 at the White Earth Health Center. This individual is a Certified Energy Manager and has numerous years of experience with energy reporting and energy saving projects for the US Air Force.
- Facility Managers at each service unit attended an Area discussion of energy projects and auditing procedures.
- Energy related courses and seminars are announced to staff.
- Billings: Training is available to all service unit facilities staff and provided through the National Environmental Health Support Center in addition to the numerous third party training courses available nationally. Facilities personnel are encouraged to attend energy management training.
- California: There are no Federally-owned facilities in this Area.
- Nashville: All Area purchases request ENERGY STAR® products when appropriate. Area facilities engineers and maintenance personnel attend Environmental Health Support Center Training when available.
- Navajo: Any energy related training from HQ are passed on to facilities managers. Most facilities mentioned that they don't have any funds for training.
- Ricardo Murga was our individual that was promoting the ENERGY STAR® program. He transferred jobs. We are in the process of reviewing our energy team.

Oklahoma City: There are no training events or special activities pertaining to energy training to report this year. Primary training has been through reading of literature provided through professional associations such as the Association of Energy Engineers and technical publications purchased.

Phoenix: The DFE Director and two of the Operations Branch Staff attended the GovEnergy Conference this year. There is no specific program within the Area to educate, train or promote ENERGY STAR®. The Area Energy Coordinator does not hold any energy related certifications.

Portland: Facility Managers, Energy Coordinators, and Facility Maintenance Staff are encouraged to enroll in training that is applicable to energy conservation. The training may be technical hands-on training, energy manager training, energy savings performance contracts, metering training, etcetera.

Portland Area Office Division of Health Facilities Engineering identified a unique training need to the Division of Facilities Operations in January 2008 and requested assistance in developing a custom energy course, the likes of which was not available in the marketplace. The Portland Area Office identified this need after performing market research and was unable to find a course that addressed the needs of maintenance mechanics at small, isolated health clinics. Collaboratively, IHS Headquarters, Portland Area Office, and DHHS's Energy Manager approached the Department of Energy Federal Energy Management Program (FEMP) staff. FEMP recognized the need and tasked the Pacific Northwest National Laboratories with developing the customized course. FEMP supported the development of such a course because it had potential for dissemination throughout IHS.

The instruction was tailored to maintenance mechanics and other "hands-on" staff. The course development process involved DHHS's energy manager, IHS HQ and IHS Portland Area Office providing input to Pacific Northwest National Labs' staff. In total, approximately 20 IHS and tribal staff participated in the instruction on April 8, 2008. Additionally, Pacific Northwest National Labs provided a "train-the-trainer" component on April 9, 2008 so that the course could be taught by others. Portland Area's leadership in this course's development impacted other Areas as well. The Deputy Director of Facilities Management from Billings Area Office participated in both the training and in the "train-the-trainer" course. Staff from DHHS Office of Facilities Management and Policy participated, and the IHS facilities program training coordinator from IHS's Environmental Health Support Center attended the course also.

The training was a success by all accounts. Facility maintenance mechanics in attendance provided consistently positive comments and feedback on their evaluation forms.

The service unit's staff is informed on ENERGY STAR® acquisitions requirements with guidance from the Area Office.

Tucson: No efforts have commenced to train staff.

## **B. Energy Coordinator Qualifications/Training/Education**

The Senior OPDIV Official and the Agency Energy Coordinator are both registered professional engineers and Certified Energy Managers.

Aberdeen: The Area Energy Manager (Delton Woodford) obtained his CEM in the summer of 2007 and has been a licensed Mechanical PE for nearly twenty years.

Alaska: The Area Energy Coordinator is a registered professional engineer and CEM.

Albuquerque: The Energy Coordinator has received training in Commissioning, DDC Systems, and HVAC. The Energy Coordinator participates annually in the PNM Energy Academy Series.

Bemidji: The Bemidji Area Energy Coordinator is not CEM certified. However, the Facility Manager at White Earth Health Center is CEM certified and his expertise is utilized to assist the Area with energy related issues.

Billings: The Area Energy Coordinator, Burke Helmer, P.E., CFM, has over twelve years of testing, commissioning, and troubleshooting of HVAC systems within commercial and healthcare related facilities. The most recent training occurred in April 2008 completing the Indian Health Service Energy Management Training "Train the Trainer" course in Washington State.

California: There are no Federally-owned facilities in this Area.

Nashville: None.

Navajo: The only training that I received was from attending the GovEnergy conference.

Oklahoma City: The Area Energy Coordinator, as well as the Staff Facility Engineer both tested for and passed their CEM exam.

Phoenix: The Area Energy Coordinator does not have any energy related certifications.

Portland: In FY-08, the Area Energy Coordinator has in conjunction with a continuing education university increased knowledge in the fields of HVAC design and energy audits.

Tucson: The Area Facility Engineer is designated as the Area Energy Coordinator but does not have any energy-specific training or qualifications.

## **II. Energy Efficiency Performance**

## A. Energy Intensity Reduction Performance

### 1. Goal Subject Buildings

Per EPA Act 2005, IHS is required to report on energy consumption and the progress toward meeting the two percent per year consumption reduction goal from an FY-2003 baseline. In FY-2003, IHS consumed a total of 1,311,076 MMBTU or 199,616 BTU/GSF. In FY-2007, IHS consumed a total of 1,216,500 MMBTU or 180,287 BTU/GSF if renewable energy credits are not factored in and 177,377 BTU/GSF if renewable energy credits are factored in. In FY-2008, IHS consumed a total of 1,248,700 MMBTU or 182,711 BTU/GSF if renewable energy credits are not factored in and 176,761 BTU/GSF if renewable energy credits are factored in.

Including Renewable Energy Credits -

Baseline Year: IHS has reduced usage from 199,616 BTU/gsf in FY-2003 to 176,761 BTU/gsf in FY-2008. This represents a reduction of 11.4 percent.

Previous Year: IHS has reduced usage from 177,377 BTU/gsf in FY-2007 to 176,761 BTU/gsf in FY-2008. This represents a reduction of 0.3 percent.

Excluding Renewable Energy Credits -

Baseline Year: IHS has reduced usage from 199,616 BTU/gsf in FY-2003 to 182,711 BTU/gsf in FY-2008. This represents a reduction of 8.5 percent.

Previous Year: IHS has increased usage from 180,287 BTU/gsf in FY-2007 to 182,711 BTU/gsf in FY-2008. This represents an increase of 1.3 percent.

The FY-2003 baseline was mutually agreed upon by IHS and DHHS.

Some fluctuation may be due to several facilities entering and leaving the inventory during the year and these facilities are not included in the reporting data. Also, there are several new staff gathering and reporting data from Area Offices and there may be some differences in methodology from previous gathering and reporting methods. This is the first year that data were reported by Installation rather than as Area-wide totals. Some past year's values may have been calculated using square footage totals that included space for which energy consumption was not reported.

Aberdeen: The market volatility of petroleum products resulted in elevated expenditures for fuel oil and propane at Aberdeen Area facilities. During the 2008 reporting period the cost per therm of fuel oil and propane nearly doubled - which is reflected in the utility cost intensity of the Area's energy report.

Alaska: The area did not provide a response to this question.

Albuquerque: The gas consumption for the AIHC is significantly lower than normal due to meter malfunctions. Meter readings of less than 10 ccf were recorded and reported. The gas company repaired the meter, but no adjustments could be made to determine the actual usage of gas for the first few months of the reporting year. The usage and cost provided in this year's report are the amounts from the monthly bills.

The gas consumption for Zuni has been significantly increasing. This is due in part to omissions in energy reports from the service unit in previous years. The old boiler system is being monitored more intensely and a project to determine an energy efficient system is proposed.

Bemidji: No significant changes are known that would skew the data.

Billings: In years past, the energy data was compiled by querying CORE by object class code and installation. Consumption was then calculated by using the Consumer Price Index in Montana for each utility. With the conversion to UFMS, the process remains similar but there are several avenues to take in compiling the data. The most accurate appears to be from the Cost Center report in Discoverer that captures all sources of funds, not just FSA. The data is then exported to MS Excel and can be compiled by object class and installation. There is some additional effort to check the accuracy of the data, e.g. using incorrect object class code, but ultimately provides an acceptable result.

California: There are no Federally-owned facilities in this Area.

Nashville: The main use of energy in the Nashville area is the Unity Healing Center in Cherokee, NC. This building was undergoing renovations during 2008. The energy usage for this building is skewed very low and should not be used for any types of benchmarking on energy reduction. The FY-2009 data will once again be good data that can then be compared to FY-2007.

Navajo: Last Fiscal Year I gathered most of the invoices from each of the service units' utility data. It was discussed at various facilities meetings that each facility manager is to collect their own invoices from the utility companies. Entered each month on a spreadsheet and calculated at when reporting is due. All facilities managers should have entered their own data. However, I entered numbers for them on various Installations.

Questions other than data reporting I emailed out questions on renewable energy and training. Few reporting back from the service units.

Oklahoma City: The values gathered this year compared very favorably with those collected in 2007. The figures varied slightly from

the previous year and matched with expectations.

Prior to that time (2007), the values collected were based upon WebFRS utility costs. WebFRS utility costs records did not include actual power consumption quantities, only dollar amounts. Some utility costs were reported in WebFRS were reported under the wrong classification. In addition, some costs, such as water, were often overinflated because they included sewer costs. Power consumption quantities were calculated by dividing the cost by the average utility rate charged by that utility company for that year.

Efforts are being made to gather old utility records back to 2003, through existing records on-hand and at last resort to pay utility companies to retrieve older archived records.

The bottom line is that the data is getting much better, however they do not compare well with the data gathered from 2003 to 2006. The 2003 Baseline will need to be reassessed at some point in order to accurately assess whether the requirements of EPAAct 2005 requirements have been met.

Another area that will reflect a big change in consumption rates per square foot is the imminent transfer of several old health care facilities to the tribes. At the present time, the Clinton Hospital and the Pawnee Hospital are unoccupied. The utility consumption is minimal. Inclusion of the square footage of these facilities in the overall cost/ft<sup>2</sup> calculations will be a deceptively low indication of the Area's energy consumption per square foot.

Phoenix: The data represents an increase in Electrical consumption. The Whiteriver hospital experienced a 23.2% increase in KWH and a 17.9% increase in fuel oil consumption. This is due to the year long major renovation that occurred during this reporting period. The other major facilities, PIMC and Hopi each had a slight decline in KWH consumption.

Data may be skewed due to a revised reporting format. The Area provided a report template for each Installation that required input for each meter. The past template only required a cumulative total which may have led to reporting only the main building and not the support buildings.

Portland: The energy use intensity per Installation is nearly similar to the previous years. No significant changes occurred that might skew the data. There were no substantial changes in energy consumption prior to the previous years. There is a noticeable change in cost. As per an Area total, energy use approximately equaled 23,200 MBtu in both FY-08 and FY-07. However, the total area energy costs were \$391K and \$368K, respectively. This amounts to an approximate 6.25% cost increase (\$23K) in one year.

A few future events are predicted to make changes to the total intensity use for Portland Area. These events include removing facilities from the real property inventory thus removing Area calculations of energy totals which include, Neah Bay and the old Colville clinic (bldg 20, 21, 22). Removing older facilities in replacement for new shall improve the energy intensity goals. The Yakama Service Unit, in FY-09, is preparing to start design for a 10% expansion in total space including an existing clinical retrofit. Energy intensity is expected to be reduced substantially following project completion.

Tucson: Nothing stands out from the data.

## 2. Excluded Facilities

See Attachment B for a listing of excluded facilities with their associated exclusion codes.

## 3. Non-fleet Vehicle and Equipment Fuel Use

All fuel consumption is collected by GSA through the use of their FAST program.

## B. Renewable Energy

The Indian Health Service is in the preplanning and information gathering stages to implement photovoltaic technology where feasible and cost effective.

### 1. Self-generated Renewable Energy

Aberdeen: Geothermal Heat Pumps are systems in service at facilities of the Aberdeen Area that can be defined as Renewable Energy sources counting towards the E.O. 13423 requirements. The new healthcare facility planned for the Cheyenne River Sioux reservation (design was completed in the spring of 2008) will be provided its primary heating and cooling needs through the use of earth-coupled geothermal heat pumps. The Area Energy Manager completed a site visit to Cheyenne, WY in August of 2008 to evaluate hybrid wind energy systems of the size and capacity that could be easily integrated into IHS campuses throughout the Dakotas.

Alaska: The Alaska tribes are beginning to pursue renewable energy. The Maniilaq Health Center in Kotzebue, AK, purchases electrical power from a local utility that produces electricity with wind generators. About 5-10% of the utility power available is wind generation for users of the electric utility system. This represents about 350-700 MBTU's consumed at the hospital from renewable wind sources.

Albuquerque: The Albuquerque Indian Health Center and Santa Fe Hospital continue to purchase 10% of their electrical usage from wind energy. Two additional buildings, one at each location, have been enrolled in the wind energy program. Since these buildings are smaller in size and usage, their wind energy is purchased in blocks.

Bemidji: The Bemidji Area did not produce any self generated renewable energy.

Billings: None to report. At this time, we consume zero energy generated on Federal or Indian lands.

California: There are no Federally-owned facilities in this Area.

Nashville: The Nashville Area did not produce any self-generated renewable energy.

Navajo: No report on renewable energy.

Oklahoma City: Geothermal energy is generated at the Pawnee Indian Health Center.

A number of facilities benefit purchasing energy from companies providing a growing percent of their generated power from renewable energy. Oklahoma has a good wind energy resource potential, particularly in the NW part of the state. The Oklahoma Gas & Electric Company (OGE) derives 2% of their energy from wind power, while the Public Service Company of Oklahoma (PSO) derives 5% of their energy from wind power.

No energy is generated on Federal or Indian Lands other than the geothermal energy utilized at the Pawnee Indian Health Center.

The 735 MWh renewable energy credits purchased 2 years ago for the Lawton Indian Hospital expired this year.

Phoenix: No known activities.

Portland: The Yakama Service Unit has completed installation of solar powered parking lights to replace the existing faulty lights. This might have been reported on the previous year's energy report. Yakama Power utility company, owned and operated by the Yakama Tribe, is currently working on increasing capacity with various renewable energy projects. These projects include small hydro and wind power. The Yakama Clinic is serviced by Yakama Power. Strong potential for purchasing of renewable energy generated on Indian lands. The Warm Springs Tribe is currently generating hydro, wind and biofuel electricity on Indian lands.

A renewable energy feasibility study has been funded for the Fort Hall service unit to be implemented in FY-09.

Tucson: The area does not have any projects to self-generate electricity.

## 2. Purchased Renewable Energy

Aberdeen: No Renewable Energy Certificates (REC's) were purchased by the Aberdeen Area service units in the 2008 reporting period.

Alaska: ANTHC and THO's did not purchase RECs in 2008.

Albuquerque: The Area does not purchase REC's.

Bemidji: The Bemidji Area did not purchase REC's in FY-2008.

Billings: The Billings Area purchased renewable energy "green tags" from Northwestern Energy representing approximately 3% of the Area's electrical consumption or 255,000 KWh. Northwestern Energy buys its renewable energy from the Judith Gap Wind Farm in Montana that came into production after 1999 and therefore is considered new renewable energy.

California: There are no Federally-owned facilities in this Area.

Nashville: Procurement of "Green Energy" is not available from the local utility supplier. REC's are available and will be initiated in FY-2009.

Navajo: No purchases of REC's.

Oklahoma City: The 735 MWh renewable energy credits purchased 2 years ago for the Lawton Indian Hospital expired this year. No other REC purchases are being pursued at this time.

Phoenix: The Area queried the 11 different electrical utility providers and found that two of them would sell the REC. Nine of eleven utility companies provide electricity from renewable sources. This information is included in the data tables.

Portland: No REC's were purchased in FY-08. This option is less feasible for PAO since nearly half of the service units are scattered sites small in area, low in comparative energy use, and serviced by small local utility companies. Portland Area has chosen to pursue feasibility of on-site renewable and feasibility of renewable generation with local utilities that serve the Federal facilities.

Tucson: None at this time.

## C. Water Conservation

The Indian Health Service is finalizing its water management plan. It has been updated to reflect new requirements, been sent out for review and comment, and the appropriate comments have been incorporated. It is anticipated that the document will be finalized and adopted before the end of the calendar year.

Aberdeen: The Area has integrated the collection of water consumption and cost into the data templates that the Service Unit Facility Managers report their facility energy and utility data on. The current reporting period's water consumption data reported by the Area Service Units will be evaluated and compared to the 2007 Baseline data (per E.O. 13423) to determine if the Area is achieving the required 2% annual reduction. Locations that are found to have water use intensity levels above the limit will be identified and water conservation opportunities planned and proposed for funding (if required) in an effort to achieve reductions in consumption without affecting the ongoing health care

programs. At locations where the lack of metering creates barricades to the collection of actual water consumption the Area will provide meters as resources allow and in the interim utilize estimating methodologies to ensure data reported is based on sound assumptions. Where water is provided at facilities by the water utility based on a flat fee or in some cases at no cost the Area will communicate the need to collect and report actual consumption - whereas in the FY-08 reporting period many locations within the Area did not collect and report their actual consumption of water and estimated water consumption at these locations was reported.

- Alaska: ANTHC and THOs are now collecting water data at the six (6) Federal IHS Hospitals in Alaska. Some Tribal Health Organizations (THOs) are beginning to plan for improved water efficiency improvements and conservation. BBAHC for example, engaged ANTHC in assisting with a pilot study to identify how to improve the water treatment plant efficiency and capacity. This resulted in funding a design for these improvements which is scheduled for completion in 2009.
- Albuquerque: The cost for water amounted to \$139K for an estimated 16 million gallons. Data are available at most locations and is available from the water utility provider. Water is estimated at two Installations and a flat rate is provided to the tribal utility programs regardless of actual use. Another installation, AIDC, continues to operate their water usage under an agreement with the SIPI campus that they reside on.
- Bemidji: The Bemidji Area utilizes best management practices to conserve water. All installations except the Ponemah clinic have a water meter installed. A meter is scheduled to be installed at Ponemah in December 2008.
- Water is provided by tribal utilities and the installations are not charged a fee. The exception is Cass Lake Hospital. Cass Lake receives water from the city of Cass Lake. A project is currently in construction to build a new tribal water system and connect the Cass Lake Hospital. No fees have been discussed, but it is anticipated the costs will be reduced.
- Billings: FY-2008 Cost and Consumption = \$123,217/36.24 million gallons
- Water consumption data is collected in the same manner as the other utilities and may be skewed by the inability to extract sewer costs.
- The Area has been waiting for additional guidance in the formulation of its water management plan and how best to implement at the service unit level. Currently, all facility managers have been encouraged to improve water efficiency through the use of new technologies and products.
- California: There are no Federally-owned facilities in this Area.
- Nashville: All water consumption values are known and reported in the data report. A circulating hot water system was installed at the Unity Healing Center in Cherokee, NC. This will allow for nearly instantaneous hot water instead of staff and residents letting water go down the drain waiting for hot water.
- Navajo: In some health stations located on BIA land, IHS does not pay for water usage. Those reporting include Many Farms, DZ Health Center, Sanostee Health Station, and Toadlena Health Center.
- Oklahoma City: The total water consumption for the Oklahoma Area was 34.878 million gallons, up 6.8% from 32.661 million gallons in 2007. The total water cost was \$38,636, up 7.8% from the \$35,836 cost in 2007.
- Efforts to continue water efficiency include continued use of the waterless urinals and routine replacement of older fixtures and toilets with efficient low flow water fixtures and toilets during corrective maintenance work.
- Phoenix: See data report for consumption and cost. Area specific issues would be that rural utilities often do not read meters. Hopi Health Care did install an additional 4 waterless urinals this year.
- Portland: Various service unit operational procedures create issues related to collection of water consumption data. The service units' water usage is estimated at the following installations;
- Fort Hall – The tribal water utility provider does not read the water meter. Billing is set at an estimated with a standard rate per month of service.
- Warm Springs - Similar to Fort Hall with a standard rate per month of service. This facility is tribally operated and at the moment there is no facility staff whom read the water meter.
- Colville – The IHS Colville Service Unit does not pay for any water. This service is provided by the Colville Tribe. The Tribal Water Utility doesn't read any of the water meters including building 70. The meter located for the Old Clinic building (20, 21, 22) is outdated and unreadable. Installation of a new water meter is unrealistic since the buildings are in the decision process to either excess to the tribe or demolition.
- Activities underway to improve water efficiency include Water Sense requirements and native plants in all new space or site development.
- The Area staff engineers work closely with service unit staff for solutions to limit water used in irrigation and operational practices.
- Tucson: Metering has been an issue and working through the tribal utility to get the issues resolved has been troublesome. The Tucson Area is considering removing all high water use vegetation.

## D. Metering of Electricity Use

The completed IHS Metering Plan and the Advanced Electrical Metering Specifications for IHS Buildings were

distributed to the Area Offices and are available on the Division of Facilities Operations' Web site. Both were submitted to the Department as required. IHS has met all metering-related milestones.

All standard meters required by the plan have been installed. Advanced meters are installed in over 25 percent of the required space exceeding the required 15 percent goal for FY-2008. Three additional advanced meters were scheduled to be installed in FY-2008. However, only one was installed with two being deferred until FY-2009. Not including the deferred installations, four additional advanced meters are scheduled to be installed in FY-2009. One hundred percent of IHS electrical consumption is metered.

## 1. Metering Program Responsibility

Overall direction and guidance for the program is at the Headquarters level. Responsibility for budgeting, implementation, and day-to-day operations is at the Area and/or Installation level.

- Aberdeen: The Acting Director of the Facilities Program established performance requirements for this activity within the PMAP elements for the Area Energy Manager.
- Alaska: The IHS Metering Plan requirements do not apply as all Alaska Area facilities are tribally-operated.
- Albuquerque: The Area Energy Coordinator is responsible for maintaining an inventory of meters at each Installation and updating the data as required. An annual site review is made to each Installation in conjunction with other projects/activities with the facility staff at each location to verify meters. The team is responsible for ensuring that the installation of advanced meters is met at the locations specified.
- Bemidji: The Bemidji Area Energy Coordinator is responsible for the implementation of the Metering Program. The facility managers at each Installation are responsible for the installation, operation, and maintenance of the meters.
- Billings: The Deputy Director of Facilities Management is tasked with the implementation of the Area's metering program.
- California: There are no Federally-owned facilities in this Area.
- Nashville: This responsibility lies with the Area Office.
- Navajo: The metering program will be handled at the Area Facilities level.
- Oklahoma City: Area Office Energy Management staff.
- Phoenix: The Area has taken part in the IHS metering plan.
- Portland: It is the responsibility for the Energy Manager to assure all metering requirements under EPCAct are met. It is the Energy Manager's responsibility to accurately incorporate metering information into HFDS. It shall be the Facility Manager's responsibility to update the Energy Manager of any meter replacements or new installations, as well as the responsibility to read the meters and communicate usage data to the Energy Manager. At the conclusion of every fiscal year, the Energy Manager provides an informal report to the service unit facility staff detailing the facility's consumption compared to conservation goals.
- Tucson: The metering program is the responsibility of the local Facility Managers.

## 2. Metering Budget

There are no funds set aside at Headquarters specifically for metering. The responsibility for implementation is at the Area level.

- Aberdeen: The FY-2008 Facilities budget identified \$60K for advanced meters.
- Alaska: The IHS Metering Plan requirements do not apply as all Alaska Area facilities are tribally-operated.
- Albuquerque: The metering is included in an Area Controls Project. The total cost of the controls project is \$285,000.
- Bemidji: The Bemidji Area funds are available to connect advanced meters to utility companies for recording and monitoring.
- Billings: Approximately \$10 - \$15,000 has been spent on advanced metering to date and anticipate an additional \$10-\$15,000 to be spent in FY-2009.
- California: There are no Federally-owned facilities in this Area.
- Nashville: \$0. All buildings have separate meters.
- Navajo: The Area has budgeted \$125K for the Navajo Area metering program for FY-2009. If additional funds are needed we will discuss during the FY-2010 FEPP.
- Oklahoma City: M&I funds are budgeted to meet our advanced metering requirements but the exact amount is not known at this time.
- Phoenix: There is no funding budgeted to meet metering requirements.
- Portland: In FY-08, a water audit has been included in scope of work requirements for an energy audit at Healing Lodge in Spokane. No budget has set aside to meet the requirements since no standard meters are in need of replacement to advanced meters.
- Tucson: None at this time.

### 3. Metering Support Services

Aberdeen: Supplemental technical support was not contracted for in the 2008 reporting period.

Alaska: The IHS Metering Plan requirements do not apply as all Alaska Area facilities are tribally-operated.

Albuquerque: A contract was recently awarded for the Area Controls Project. The contract includes the installation of controls for the Installations requiring advanced meters.

Bemidji: The Bemidji Area did not contract for support services. However, local utility company representatives are utilized for information.

Billings: None to report.

California: There are no Federally-owned facilities in this Area.

Nashville: No.

Navajo: No. The metering project is a FY-2009 project. Discussions will take place in FY-2009.

Oklahoma City: Not yet. The Area intends to contract the advanced metering Installation in FY-2008.

Phoenix: The Area has not identified funds for contract support services to help achieve mandates.

Portland: No support services were contracted to provide consultation for implementation of the mandates. Only projects that directly affect the energy reduction or target specific energy studies to meet the mandates were contracted. These projects were developed in scope by the Area and service unit staff.

Tucson: Not at this time.

### 4. Metering O&M Contracts

Aberdeen: No additional O&M contracts were developed or awarded specifically for the ongoing maintenance, repair or operation of advanced meters in the 2008 reporting period.

Alaska: The IHS Metering Plan requirements do not apply as all Alaska Area facilities are tribally-operated.

Albuquerque: No on site O&M contracts.

Bemidji: Metering requirements are currently being added to installation O&M procedures. Not fully integrated.

Billings: No

California: There are no Federally-owned facilities in this Area.

Nashville: N/A

Navajo: Not at this time. Once the advanced meters are installed we will incorporate the O&M contracts at each installation.

Oklahoma City: No.

Phoenix: The Area does not currently have site O&M contracts.

Portland: No meters have been replaced or added as a part of the metering requirements. The building size and installation configurations don't warrant advanced meters for Portland Area. All water, electricity and natural gas utilities provided to the service units are metered, not all are read. If a new utility service is added, a meter shall be installed.

Tucson: None at this time.

### 5. Metering Design Guidance

The Indian Health Service developed the IHS Metering Plan and the Advanced Electrical Metering Specifications for IHS Buildings both of which were distributed to the Area Offices and are available on the Division of Facilities Operations' Web site.

Aberdeen: The Agency guidance document (TH 72-3) supplemented with DOE Guidance document for Advanced Metering in Federal Buildings are documents that define the minimum performance requirements for the advanced metering hardware and performance. At this time no specifics (manufacturer, product or protocol) for the meters have been implemented formally.

Alaska: The IHS Metering Plan requirements do not apply as all Alaska Area facilities are tribally-operated.

Albuquerque: Area and facility staff both contributed to the development of the contract requirements.

Bemidji: The Bemidji Area utilized guidance provided by Headquarters as well as information provided by local utility companies.

Billings: The Area is planning and implementing all activities associated with the metering program which includes specifying equipment, software, and hardware necessary to meet the IHS objectives. Service unit involvement is minimal at

this time.

California: There are no Federally-owned facilities in this Area.

Nashville: N/A

Navajo: No design/specifications guidance was issued. A list of implementation strategies was e-mailed to each of the service units that met the requirements for installation of advanced meters.

Oklahoma City: None.

Phoenix: Headquarters developed the IHS Metering Plan to provide guidance and ES developed metering specifications.

Portland: The service units develop a meter reading schedule individually, dependant on service unit and meter type. Typically utility information is obtainable from the utility providers. Guidance is provided if upgrades to advanced meters with energy management systems is desired or if new space is added from construction. The software is only utilized to its full potential if the Facility Manager commits to utilizing the software and analyzing the data for improved facility operation.

Tucson: None at this time.

## 6. Metering Communications Systems

Aberdeen: The requirements identified in the DOE guidance document and Agency Technical Handbook have been provided for review, coordination, and information, to all service unit CEOs and Facility Management staff.

Alaska: The IHS Metering Plan requirements do not apply as all Alaska Area facilities are tribally-operated.

Albuquerque: The Area and facility staff will work with the Contractor on developing the system as it is installed and implemented under this contract.

Bemidji: The Bemidji Area is currently working with local utilities to address the communication connection requirements. No final plans have been developed.

Billings: Installation managers and IT staff's involvement in the metering plan has been minimal to date aside from them identifying static IP addresses for our servers to reside at.

California: There are no Federally-owned facilities in this Area.

Nashville: N/A

Navajo: No plans have been issued yet to the Installation managers and IT staff. During FY-09 Navajo Area will be incorporating advanced meters to all Installations that meet the sq ft threshold for installing advanced meters. Until then IT will become involved as well as facility managers.

Oklahoma City: Metering plans have not yet been fully developed for issuance to Installation managers and information technology staff.

Phoenix: No plans have been issued to the facility managers or the IT staff on how to address metering system's communications requirements.

Portland: No advanced meters are required at the service units.

Two meters in the Area Office were installed to quantify an electrical billing agreement with GSA. The meters measure usage of the server and supplementary cooling equipment in the IT department. GSA's billing of PAOIHS IT electricity use is dependent on this meter. IT staff is trained to read the meter and assure that GSA billing is correct. PAO Area DHFE staff work with GSA to review the usage and billing information.

Tucson: None at this time.

## 7. Metering Training

Both the Senior OPDIV Official and the Agency Energy Coordinator have attended HHS sponsored training sessions related to metering/advanced metering. The Agency Energy Coordinator has also attended several other metering/advanced metering training sessions sponsored by DOE as well as sessions offered in conjunction with GovEnergy.

Aberdeen: No Aberdeen Facilities Staff have had the opportunity to attend formal training on advanced metering.

Alaska: The IHS Metering Plan requirements do not apply as all Alaska Area facilities are tribally-operated.

Albuquerque: One Area employee has attended training through Webcasts. None of the facility staff have received previous training.

Bemidji: The facility manager at the White Earth Health Center has experience with metering.

Billings: Currently only one, the Deputy Director of Facilities Management, has attended metering/advanced metering training.

California: There are no Federally-owned facilities in this Area.

Nashville: None.

Navajo: I didn't receive any feedback regarding any employees attending any metering program. No one at the Area level received advanced metering training.

Oklahoma City: Two Area Office employees have participated in several online metering training opportunities as well as energy conference training sessions.

Phoenix: None of the Area's staff have attended metering or advanced metering training.

Portland: One employee from the Area office participated in the DOE advanced metering Web training.

Tucson: None.

## 8. Metering Installation Progress

See Attachment C for the IHS cumulative metering schedule.

Aberdeen: The Aberdeen Area has identified all facilities which require standard and advanced meters and has implemented a funding plan to ensure adequate funds are identified and programmed specifically to accomplish the metering upgrades. The Agency's Metering Plan has been presented to all Service Unit Facilities Management staff and Service Unit Program management.

Alaska: The IHS Metering Plan requirements do not apply as all Alaska Area facilities are tribally-operated.

Albuquerque: The installation and implementation of controls has commenced. Both installations will meet the designated deadline.

Bemidji: The Bemidji Area continues to develop a communication connection between the Installations and the local utility companies. This connection and implementation is anticipated to be complete by December 31, 2009.

Billings: Out of the three Installations required to have advanced metering, two are fully operational and the third is planned to be installed in FY-09.

California: There are no Federally-owned facilities in this Area.

Nashville: All buildings are separately metered.

Navajo: Our plan is to install an advanced meter at Ft. Defiance Hospital by end of 2009.

Oklahoma City: Facilities are still being assessed for the appropriate advanced metering systems.

Phoenix: The Area has installed all the advanced meters required by the IHS Metering Plan.

Portland: All water, electricity and natural gas utilities provided to the service units are metered. No service unit is required to upgrade to advanced meters unless new space is added.

Tucson: All buildings have the meters required by the IHS Metering Plan.

## 9. Metering Installation Progress Toward Fully Operable and Integrated Metering

The completed IHS Metering Plan and the Advanced Electrical Metering Specifications for IHS Buildings were distributed to the Area Offices and are available on the Division of Facilities Operations' Web site.

All standard meters required by the plan have been installed. Advanced meters are installed in over 25 percent of the required space exceeding the required 15 percent goal. One hundred percent of IHS electrical consumption is metered.

Aberdeen: The FY-08 FEPP included funding approval to provide planning, procurement and installation of advanced meters for the Pine Ridge Hospital. The new facility which will be constructed at Eagle Butte Facility (construction contract executed in June of 2008) will include advanced meters to be provided under the construction contract.

Alaska: The IHS Metering Plan requirements do not apply as all Alaska Area facilities are tribally-operated.

Albuquerque: No additional buildings to report.

Bemidji: The Red Lake Hospital currently has an advanced meter installed, but it is not connected to a communication network. Plans are in process to connect this meter to the utility company.

The White Earth Health Center currently has advanced meters installed as part of the diesel generator power supply utilized during peak loads. These meters are not connected to a communication network, and plans are in process to connect these meters to the utility company.

The Cass Lake Hospital has a standard meter installed. An advanced meter is not required since the building is under 7,000 GSM.

The other federal facilities in the Bemidji Area do not meet the size requirements of 7,000 GSM to require the installation of advanced metering, and are monitored with standard meters.

Billings: Crow Hospital has had an advanced electric meter installed (2008) and connected to the building's EMCS.

Fort Belknap (Harlem) Installation had one new building (00006 - Ambulance Service Garage) built but has electrical service through the hospital. A new natural gas meter (264936TC) was installed in 2007 for the building.

Hays Installation had one new building (00002 - Ambulance Service Garage) built but has electrical service through the hospital. Heat is supplied electrically.

California: There are no Federally-owned facilities in this Area.

Nashville: All buildings have separate meters.

Navajo: No Installations are equipped with the new advanced metering system.

Oklahoma City: None.

Phoenix: All buildings in the Phoenix Area have the meters required by the IHS Metering Plan.

Portland: Yakama plans a standard meter addition for new building space, Spring of 2009

Colville plans a standard meter addition for new building space, Autumn of 2009

Tucson: All buildings have the meters required by the IHS Metering Plan.

## 10. Metering-related Consumption Reduction

Aberdeen: Funding was identified for one Advanced Metering system to be provided at the Pine Ridge facility. At the time of this report the advanced metering system procurement has not yet been performed. The Area Facilities program and Energy Manager are evaluating the hardware options, software protocols for the system and anticipate completion of the project at the Pine Ridge facility in early calendar year 2009. Follow up advanced meters at other Area facilities are intended to be specified based on the standards and technology utilized for the Pine Ridge facility to ensure data, software and hardware O&M can be economically maintained and supported.

Alaska: The IHS Metering Plan requirements do not apply as all Alaska Area facilities are tribally-operated.

Albuquerque: The controls project is directly funded and will provide information on the management of equipment at those locations. On-going monitoring of those systems will be used to make changes and improvements to operations. The facilities staff at AIHC has made significant improvements to their system throughout the last ten years and is leading the controls project at the other Area Installations. Their experience will be relied upon to guide the staff at these Installations.

Bemidji: Bemidji Area is currently working to implement the connection and communication for advanced metering to allow measurement of demand at 15 minute intervals. We will then be able to adjust and modify existing electricity usage to reduce loads during peak demand periods, and reduce energy consumption.

The White Earth Clinic currently uses a diesel generator to supply power to the entire Installation in a similar manner to reduce increased costs of usage during high demand.

Projects are currently in place to replace inefficient equipment and install energy efficient lighting and windows to help reduce energy usage.

Billings: The Area has currently reduced its electrical energy intensity by 6% as compared to the 2003 baseline.

This was achieved through a combination of direct agency funding and no-cost corrective actions.

California: There are no Federally-owned facilities in this Area.

Nashville: A large renovation was recently completed at the Unity Healing Center. Higher efficiency Chiller and Boiler were installed. Additional insulation was added to all walls. A new metal roof with well ventilated attic was installed over the entire facility to prevent additional heat gain and prevent water intrusion.

Navajo: N/A

Oklahoma City: Not applicable. No advanced metering presently installed.

Phoenix: No progress has been made.

Portland: In FY-08 there were several projects funded with the goals of energy conservation and improved building performance. These projects are evaluated in part by previous energy audits. There is also a renewable energy feasibility project funded. All of these are implemented due to preliminary life cycle costs showing the project to be a good investment or implemented under the mandates of EPAct.

DDC controls on HVAC mechanical equipment were installed in at Western Oregon, Jan 08. The energy use is continually optimized through facility operational staff and usage is evaluated from utility billing. To date, the controls have saved energy as compared to previous years of facility use.

Tucson: None at this time.

## 11. Time-based Rate Programs

- Aberdeen: The Aberdeen Area is geographically located in three states and is served by multiple utility companies, therefore a single Area-wide agreement with a utility is not possible.
- Alaska: Not applicable in Alaska.
- Albuquerque: A time based rate program may be available through PNM, but has not been fully researched to determine if the Installations will meet the demand structures.
- Bemidji: The Bemidji Area White Earth Health Center operates on a time based rate program. During peak loading, an on-site diesel generator supplies power for the entire clinic.
- Billings: The Area's utility companies do not currently provide time-based rate programs.
- California: There are no Federally-owned facilities in this Area.
- Nashville: N/A
- Navajo: The Area did not provide a response to this question.
- Oklahoma City: No. Time-based rate programs are not practical for use in the hospitals. Clinics are typically located in small towns and rural areas where time-based rate programs are not offered.
- Phoenix: No participation in a utility-offered time-based program. Limited staffing resources keep this objective from developing.
- Portland: No participation in utility-offered time-based rate programs. There are no advanced meters with energy management systems to apply this incentive. Currently, projects are focused on the high energy consuming facilities and evaluated from maintenance needs or energy saving opportunities. The focus of energy conservation is to upgrade inefficient systems as a first step, e.g., HVAC, controls, insulation, envelope upgrades, operational practices.
- Tucson: We do not have those rates available.

## E. Federal Building Energy Efficiency Standards

See worksheet titled List of New Federal Building Designs and Construction in Attachment A.

- Aberdeen: Although the Area does not have any new facilities where design began since the beginning of FY-07 all facility designs (new facility at Eagle Butte) that were in place at that time did have requirements for the design process to include advanced metering systems.
- Alaska: No new Federally-owned buildings have been under design since the beginning of FY-2007.
- Albuquerque: No new buildings to report.
- Bemidji: The Bemidji Area is currently in preliminary design of an addition to the Red Lake Hospital. No new buildings are currently in design.
- Billings: Quarters 108 - 2 Bedroom  
 Quarters 109 - 3 Bedroom  
 Quarters 110 - 3 Bedroom  
 Quarters 111 - 3 Bedroom  
 Quarters 112 - 3 Bedroom  
 Quarters 122 - 2 Bedroom  
 Quarters 123 - 3 Bedroom  
 Quarters 124 - 3 Bedroom  
 Quarters 125 - 3 Bedroom  
 Quarters 126 - 3 Bedroom  
 Quarters 119A - 1 Bedroom  
 Quarters 119B - 1 Bedroom  
 Quarters 119C - 1 Bedroom  
 Quarters 119D - 1 Bedroom  
 Quarters 119E - 1 Bedroom  
 Quarters 119F - 1 Bedroom
- The housing units are expected to meet the International Conservation Energy Code for residential construction as per CFR 435 although the design of the units began after January 3, 2007.
- California: There are no Federally-owned facilities in this Area.
- Nashville: N/A
- Navajo: New Kayenta Health design development submittal 9/12/08 date. E.O 13123, and ASHRAE/IESNA 90.1-2001 being incorporated. The facility will also be certified under the LEED and Green Globes programs.
- Oklahoma City: No new buildings (Federally owned) have been under design since the beginning of FY-2007.
- Phoenix: One building has started design in FY-2007. It is being designed through a Public Law 638 agreement and it is not known what standards it is being built under.

Portland: No design started in FY-08  
Design is scheduled to start in FY-09,

Yakama new building (5000 sq ft) - Specified to meet ASHRAE 30% Advance design from Standard 90.1-1999  
Colville new building dental and office space.

Tucson: No new buildings are currently in design or under construction.

### III. Implementation Highlights of FY 2008

#### A. Life-Cycle Cost Analysis

Aberdeen: Projects to provide new or replacement program and support space (primarily through MM funding) will integrate the requirements of EAct 2005, the MOU and Executive Order 13423 to ensure all energy loads, building features and primary equipment comply with the minimum standards applicable. Projects completed in 2008 include replacement of chilled water equipment at the Belcourt facility with new chillers that comply with the EAct and MOU. In addition a project completed at our Sisseton facility will reduce the volume flow rate of ventilation air introduced into the facility by approximately 9000 CFM - at all times the facility is in the occupied mode. This reduction in energy needed to condition the ventilation air (outside air) to room temperature is estimated to save the organization an equivalent of approximately 8,000 gallons of fuel oil/year.

Alaska: All hospital energy audits include a life-cycle analysis of all proposed energy conservation measures. This information is used to assist the Tribal Management staff with the knowledge to select the best projects and prioritize their implementation.

Albuquerque: The project managers perform a life cycle cost analysis when reviewing projects and services. However, most projects undertaken have been based on need and priority to ensure the delivery of health care.

Bemidji: The Bemidji Area utilizes life cycle cost analysis to assist in determining pay back periods for projects. Life cycle analysis was utilized in the planning of the Red Lake Hospital light fixture ballast upgrade from T-12 to T-8. Payback was determined to be 5 years.

Billings: A life-cycle cost analysis is required per the Area's energy awards program but is not formally required in capital budgeting decisions.

California: There are no Federally-owned facilities in this Area.

Nashville: N/A

Navajo: Consideration of larger projects on a life-cycle cost analysis are being implemented. An example is replacing/refurbishing two (2) 1959 installed Nebraska boilers. Our challenge is recording data from current boiler loads and comparing information to meet any reduction in cost by replacing with more efficient units.

Oklahoma City: A procedure used to ensure the use of life-cycle cost analysis in making investment decisions about construction to lower the Federal Government's costs and to reduce energy and water consumption included completion of a life-cycle cost analysis in April of 2008 for a design to replace forty-one year old high-pressure steam boilers at the Lawton Indian Hospital. Utility rate structures were used in the comparison of two alternatives. Condensing heating water boilers, coupled with a small steam boiler that will replace existing central steam generation for steam kettles in the kitchen and for sterilizers, had the lowest life-cycle cost and this alternative was selected for the design.

Phoenix: No efforts towards life-cycle cost analysis have been made.

Portland: Life cycle cost was conducted on projects which improve energy efficiency.

DDC controls at Western Oregon, evaluated that the energy saving would have a payback of 7 yrs. Previous 9 months show a savings of \$3,000 in energy use compared to the previous year.

Attic Fans at Yakama, evaluated the energy saving from reducing the cooling demand load during summer months. It was shown that the project would payback in 4-5 yrs.

Both of these analyses only take into account the direct energy savings to implement the project. There are other increased savings that are either unquantifiable or don't have a dollar amount. For instance, by reducing the heat load in the attic the cooling demand is taken off of the chiller. Therefore, maintenance costs are reduced. The life cycle costs of these projects were not the key factor for the decision of implementing the project or not. The facility performance and operational concerns were key to these projects being completed. The life-cycle cost was used as a tool to communicate that the project would payoff from the investment.

Tucson: No major decisions in 2008

#### B. Retrofits and Capital Improvement Projects

Aberdeen: Reduction of Ventilation air requirements (yet full compliance with ASHRAE and the AIA ventilation air requirements for IAQ).  
Specification of equipment and building systems that meet ENERGY STAR® requirements.  
Specification of ENERGY STAR® roofing systems, etc.

Alaska: Three projects began in 2008 that improve efficiency or reduce energy consumption through retrofits.

ANMC specified and began installation of 25 reduced flow toilets which will reduce the water consumption at the hospital.

BBAHC began the water treatment plant design for water efficiency and capacity improvements; this effort will complete in 2009.

YKHC removed 4 inoperable heat wheels in their HVAC systems to reduce the pressure drop and air restrictions and improve energy efficiency. In 2005 YKHC determined that the savings to be realized would be about \$55,000 annually should the heat wheels get removed; today that number may be greater as fuel oil costs alone have increased some 37 percent from 2005 to 2008.

Albuquerque: The Area completed an Area-wide re-roofing project that not only addressed deficiencies but was also aimed at improving energy efficiency. The r-value was increased to the extent practicable at each hospital included in the project and white roofing systems were installed. Mechanical improvements were made that involved replacing equipment with more efficient systems and controls were added as appropriate to be integrated into the overall controls project that was in the planning stages.

Bemidji: The Bemidji Area includes energy saving projects in the annual Facility Engineering Program Plan. These projects consist of both projects completed using annual funding as well as pool projects for larger projects with higher costs. The Area completed several energy savings projects in FY-2008. Pine Point Clinic replaced all T-12 lighting systems with T-8 systems. Naytahwaush clinic replaced old windows with energy efficient units. White Earth Health Center completed the final construction phase of a complete digital control system to replace pneumatic controls. Red Lake Hospital is currently replacing a 28 year old AHU and plans to replace all 10 units over the next 10 years. Cass Lake Hospital installed 50 energy efficient windows.

Billings: The Northern Cheyenne Clinic (built in 1999) was identified as the most energy intensive building within the Area in FY-07. In an effort to improve energy efficiency, the Area in cooperation with the service unit has awarded a contract to upgrade its building controls, replace malfunctioning equipment, and reconfigure the hot water piping to allow for variable speed pumping.

California: There are no Federally-owned facilities in this Area.

Nashville: During 2008 the Unity Healing Center underwent major renovations. The old fuel oil cast iron sectional boiler was removed and replaced with a high efficiency natural gas fired boiler. The old chiller was replaced with a new higher efficiency chiller. The exterior walls of the facility consisted of 8 inches of rock and 4 inches of brick on the interior overlaid with sheet rock. No insulation was present. All exterior walls were furred out to add R 19 insulation. Previously all units in the building were under manual control at each unit. This has been centralized through the use of a building automation system. Controls and limits can be set to assure that the building runs as efficiently as possible.

Navajo: Replaced two cooling towers with smaller energy efficient units. A Navajo Area-wide roofing project has been going on for the past three years. This project has replaced shingle roof with metal roofs. We have completed re-roofing all quarters at Crownpoint, Dzith Na O Dilt Hle, Inscription House, Kayenta, Tsaille, Many Farms, Fort Defiance old quarters, Window Rock quarters, half of Chinle quarters and half of Tuba City quarters. Chinle Phase II Re-roofing project will take place during FY-2009. Revolving doors have been installed at Ft. Defiance Indian Medical Center and the new expansion at Chinle Hospital.

Oklahoma City: Implementation of a new finance system in FY-2008 limited our ability to make progress on retrofit and capital improvement projects to improve energy efficiency and reduce energy consumption.

Phoenix: A new roof was installed on the Whiteriver Hospital. A replacement boiler was installed at PIMC. PIMC also did an insulation project and began building envelope thermography. The Area has budgeted to purchase more thermography equipment in the upcoming year.

Portland: FY-08 Projects with improved energy efficiency outcome;

Solar parking lights at Yakama  
Major HVAC systems retrofit including DDC controls replacement for the Yakama clinic  
Exterior window replacement at Yakama  
Commissioning with test and balance at Colville  
DDC control upgrade for HVAC mechanical equipment at Western Oregon  
Insulation of pumps at Western Oregon  
Install shading on the skylight glazing at Western Oregon  
Window Replacement for OEHE office at Ft. Hall  
Add insulation in maintenance at Wellpinit  
Lighting retrofit at Healing Lodge, Spokane

Tucson: The Area has begun removing all old fluorescent fixtures.

## C. Use of Performance Contracts

### 1. Energy-Savings Performance Contracts (ESPC's)

Aberdeen: The Aberdeen Area did not utilize ESPC contracts in the 2008 reporting period.

Alaska: ANTHC and its associated THO's have not engaged ESPC's in Alaska.

Albuquerque: No ESPC's to report.

Bemidji: The Bemidji Area did not enter into any ESPC's for 2008.

Billings: ESPC contracts are not being utilized at this time.

California: There are no Federally-owned facilities in this Area.

Nashville: No ESPC's.

Navajo: No ESPC contracts are currently signed or being processed.

Oklahoma City: No ESPC's were used.

Phoenix: No activities related to the use of ESPC's.

Portland: No ESPC's were signed.

Tucson: None at this time.

## 2. Utility Energy Services Contracts (UESC's)

Aberdeen: The Aberdeen Area did not enter into any UESC's in the 2008 reporting period.

Alaska: ANTHC and its associated THO's have not engaged UESC's in Alaska. ANTHC is engaged in assessing utility costs and alternatives in collaboration with other large energy users including the University of Alaska Anchorage (UAA) and Providence Medical Center and others.

Albuquerque: No UESC's to report.

Bemidji: The Bemidji Area did not enter into any USECs for FY-2008.

Billings: UESC's are not being utilized at this time.

California: There are no Federally-owned facilities in this Area.

Nashville: No UESC's.

Navajo: No UESC contracts are currently signed or being processed. The majority of IHS buildings are being provided by NTUA. NTUA does not provide any type of UESC. Other utility firms haven't been contacted requesting information on UESC.

Oklahoma City: No UESC's were used.

Phoenix: No activity related to the use of UESC's.

Portland: No UESC's were used.

Under M&I budget,  
FY-08  
Funding was allocated for one energy audit with renewable energy studies.  
FY-09  
Funding was allocated for one facility energy audit

Tucson: None at this time.

## D. Use of ENERGY STAR® and Other Energy-Efficient Products

Aberdeen: The Area does address this requirement in the specifications completed for projects and ensures work produced through A/E's includes the minimum standards for efficiency.

Alaska: All design reviews orchestrated through ANTHC have an operational and energy efficiency review effort conducted on the plans and specifications through their development. This insures that ENERGY STAR, National Energy Policy objectives and energy efficient products and processes are incorporated into the building designs.

Albuquerque: The Area continues to promote the procurement and specification of ENERGY STAR® and/or energy efficient products as appropriate. Information is disseminated and updated as necessary.

Bemidji: The Bemidji Area promotes the use of ENERGY STAR® products, and incorporates this into specifications for new products.

Billings: The Area continues to promote ENERGY STAR® products when specifying or purchasing equipment.

California: There are no Federally-owned facilities in this Area.

Nashville: All new procurements recommend ENERGY STAR® when appropriate.

Navajo: Department of Acquisitions is aware that any equipment being obtained through their office needs to incorporate the

ENERGY STAR® label. All new design/construction has incorporated energy efficient criteria. All new construction and renovations at the installation level need to be evaluated.

Oklahoma City: The updated fact sheet on the ENERGY STAR® Bulk Purchasing Tool (which was recently renamed ENERGY STAR® Quantity Quotes) was shared with our procurement colleagues.

Phoenix: ENERGY STAR® is incorporated into the standard specifications.

Portland: When applicable to the type of appliance, ENERGY STAR® compliance is requested in any new project scope of work. The facility staff work closely with acquisition staff to assure this requirement is met. Often, there are conflicting acquisition regulations involving ENERGY STAR® products and other acquisition regulations/mandates. Energy efficiency criteria are incorporated in performance measures for any new design work. Building commissioning service is utilized for both new construction and existing building retro-commissioning.

Tucson: This is done through Area Acquisitions.

## **E. Sustainable Building Design and High-Performance Buildings**

The Indian Health Service incorporates the principles of the Federal Leadership in High Performance and Sustainable Buildings Memorandum of Understanding. The design of the Kayenta replacement facility began in FY-2007 and when constructed will be both LEED and Green Globes certified. All buildings whose designs started in FY-2007 or after will meet or exceed the Federal building efficiency standards. A listing of buildings whose designs began in FY-2007 or after can be found in Attachment A.

Aberdeen: Sustainable building design principles are incorporated into the overall design objectives and requirements. In 2008 the Area also created (through the new Energy Manager position) a mechanism to ensure additional technical review of project documents is completed prior to the Final design phase to ensure any/all sustainable building design elements that are cost effective have been included in the design process.

Alaska: All design documents orchestrated through ANTHC have a sustainable building design review and energy efficiency review effort conducted on the plans and specifications for buildings through their development. This insures that sustainable building design principles and ENERGY STAR, National Energy Policy objectives, and energy efficient products and processes are incorporated into the building designs.

Albuquerque: No information to report.

Bemidji: The Bemidji Area is not currently designing new facilities. However, an addition is in the preliminary design stages for Red Lake Hospital.

Billings: Sustainable building practices, to a degree, have always played a part in new facilities. Whether it is energy efficiency, proper site selection, or IEQ, it is always in the best interest of the owner and occupants to incorporate as many sustainable building practices as practicable.

California: There are no Federally-owned facilities in this Area.

Nashville: N/A

Navajo: New Kayenta facility will be designed to LEED and Green Globes standards.

Oklahoma City: We are aware of sustainable building design principles from <http://www.wbdg.org> but we did not have any new Federally-owned facilities designed and constructed in FY-2008. However, an Indian tribe in Oklahoma that has begun design of a new health facility under a Joint Venture project is considering obtaining LEED certification of this future facility and we have provided initial assistance to them due to our recent experience with obtaining LEED certification of another health facility.

Phoenix: Sustainable building principals are considered in all project designs.

Portland: The Guiding Principle of High Performance Buildings is included in all design scope of work that requires an A/E contract. It is a part of the scope that the A/E design understand the Guiding Principles and apply them to the design and construction of new facilities.

Tucson: None at this time.

## **F. Energy Efficiency/Sustainable Design in Lease Provisions**

Aberdeen: The Leasing Authority for the Aberdeen Area identifies these minimum requirements. Leasing Authority is located at the Seattle ES office however, planning for space needs and overall minimum requirements for the services to be provided are developed and defined by the Area.

Alaska: N/A

Albuquerque: Tribes were encouraged to utilize sustainable building design and incorporate energy efficiency in the construction of new facilities. One tribe did include language on energy efficiency standards in their procurement of a design/build contract.

Bemidji: The Bemidji Area utilizes leased office space for field offices. Sustainable building principles are reviewed and considered when choosing lease space.

Billings: Currently not being addressed in leases.

California: There are no Federally-owned facilities in this Area.

Nashville: Newer buildings are preferred as they are more energy efficient than older buildings.

Navajo: The Navajo Area currently does not input specific energy and water efficiency requirements for a lease, but they are entered by the leasing contracting officer at HQE and Engineering Services-Dallas.

Oklahoma City: Instructions for implementing Executive Order 13423 were provided and suggested for inclusion in a technical handbook chapter update on lease management.

Phoenix: Leases are handled through ES-Dallas and they have incorporated the requirements in the SFO's.

Portland: In the Health Facilities Program the facility managers incorporate energy and water efficiency practices for a building if the lease of the building requires PAOIHs to provide maintenance.

Tucson: None at this time.

## **G. Distributed Generation, including combined cooling, heating, and power systems**

Aberdeen: No solar, wind, fuel cells, PV projects were completed by the Aberdeen Area in the 2008 reporting period.

Alaska: N/A

Albuquerque: No new information to report.

Bemidji: The Bemidji Area did not install any new non-renewable distributed generation for FY-08.

Billings: Nothing to report to date.

California: There are no Federally-owned facilities in this Area.

Nashville: N/A

Navajo: No new non-renewable energy distributed generation have been implemented at the Navajo Area.

Oklahoma City: No non-renewable distributed generation technologies were used.

Phoenix: No activity of new non-renewable distributed generation technologies.

Portland: A project is currently assessing the feasibility of solar water heating to meet demand at the Healing Lodge. Yakama has installed solar parking lights which are off grid. The usage serves a single purpose and the lighting needs are met from the installation.

Tucson: None at this time.

## **IV. Data Tables and Inventories**

### **A. FY 2008 Annual Energy Management Data Report**

See Attachment A.

### **B. Excluded Facilities Inventory**

See Attachment B for a listing of excluded facilities with their associated exclusion codes.

# Attachment A

## FY-2008 OPDIV Energy Management Data Report

## Indian Health Service FY 2008 Energy Management Performance Summary

### Goal Performance

<b>Energy Management Requirement</b>	FY 2003 Btu/GSF	FY 2008 Btu/GSF	Percent Change 2003 - 2008	FY 2008 Goal Target
Reduction in energy intensity in facilities subject to the EPACK and E.O. 13423 goals	199,616	176,761	-11.4%	-9.0%

<b>Renewable Energy Requirement</b>	Renewable Electricity Use (MWH)	Total Electricity Use (MWH)	Percentage	FY 2008 Goal Target
Eligible renewable electricity use as a percentage of total electricity use	3,855.0	174,183.9	2.2%	3.0%

<b>Water Intensity Reduction Goal</b>	FY 2007 Gallon/GSF	FY 2008 Gallon/GSF	Percent Change 2007 - 2008	FY 2008 Goal Target
Reduction in potable water consumption intensity	36	43.0	20.2%	-2.0%

<b>Metering of Electricity Use</b>	Cumulative # of Buildings Metered	Cumulative % of Electricity Metered	Cumulative % of Appropriate Buildings Metered	FY 2012 Goal Target
Standard Electricity Meters in FY 2008	522	80.5%	98.7%	100%
Advanced Electricity Meters in FY 2008	7	19.5%	1.3%	Maximum Extent Practicable
Total Electricity Meters in FY 2008	529	100.0%	100.0%	

<b>Federal Building Energy Efficiency Standards</b>	Percent of New Building Designs	FY 2007 forward Goal Target
Percent of new building designs started since beginning of FY 2007 that are 30 percent more energy efficient than relevant code, where life-cycle cost effective:	11%	100%

### Investments in Energy and Water Management

<b>Sources of Investment</b>	Investment Value (Thou. \$)	Anticipated Annual Savings (Million Btu)
Direct obligations for facility energy efficiency improvements	\$6,570.8	4,995.4
Investment value of ESPC Task/Delivery Orders awarded in fiscal year	\$0.0	0.0
Investment value of UESC Task/Delivery Orders awarded in fiscal year	\$0.0	0.0
Total	\$6,570.8	4,995.4

	Percentage
Total investment as a percentage of total facility energy costs	26.2%
Financed (ESPC/UESC) investment as a percentage of total facility energy costs	0.0%

## FY 2008 ENERGY MANAGEMENT DATA REPORT

Agency: Indian Health Service  
 Date: 21-Nov-08

Prepared by: CDR Gordon Delchamps, P.E., CEM  
 Phone: 301-443-1367

### PART 1: ENERGY/WATER CONSUMPTION AND COST DATA

#### 1-1. NECPA/E.O. 13423 Goal Subject Buildings

Energy Type	Consumption Units	Annual Consumption	Annual Cost (Thou. \$)	Unit Cost (\$)	Site-Delivered Btu (Billion)	Est. Source Btu (Billion)	Est. GHG Emissions (MTCO <sub>2</sub> e)	
Electricity	MWH	162,267.0	\$14,935.4	\$0.09 /kWh	553.66	1,922.9	105,028	
Fuel Oil	Thou. Gal.	1,118.0	\$3,541.8	\$3.17 /gallon	155.1	155.1	11,374	
Natural Gas	Thou. Cubic Ft.	389,041.1	\$3,816.7	\$9.81 /Thou Cu Ft	401.1	401.1	21,319	
LPG/Propane	Thou. Gal.	1,015.0	\$2,049.5	\$2.02 /gallon	96.9	96.9	6,042	
Coal	S. Ton	0.0	\$0.0	#DIV/0! /S. Ton	0.0	0.0	0	
Purch. Steam	BBtu	0.0	\$0.0	#DIV/0! /MMBtu	0.0	0.0	0	
Other	BBtu	1.3	\$0.3	\$0.23 /MMBtu	1.3	1.3		
Purch. Renew. Electric.	MWH	11,916.9	\$756.0	\$0.06 /kWh	40.7

Other	BBtu	0.0	\$0.0	#DIV/0! /MMBtu	0.0	0
Total Costs:			\$0.0		0.0	0

**Optional 1-3a. Fleet Vehicle Consumption and Costs Captured by the FAST System**

(Input reflects format of Section IV, Part C, Annual Fuel Consumption Report, by Fuel Type of FAST SF 82 - Aggregate Combined Report)

Description	Consumption Units	Annual Consumption	Annual Cost (Actual \$)	Btu (Billion)
Biodiesel	GEG	0.0	\$0.0	0.0
Diesel	GEG	0.0	\$0.0	0.0
Electric	GEG	0.0	\$0.0	0.0
E-85	GEG	0.0	\$0.0	0.0
Gasoline	GEG	0.0	\$0.0	0.0
Hydrogen	GEG	0.0	\$0.0	0.0
M-85	GEG	0.0	\$0.0	0.0
LPG	GEG	0.0	\$0.0	0.0
NG	GEG	0.0	\$0.0	0.0
Other	GEG	0.0	\$0.0	0.0
TOTAL	GEG	0.0	\$0.0	0.0

**1-4. RENEWABLE ENERGY GENERATED ON FEDERAL OR INDIAN LAND WHERE RECS ARE RETAINED BY THE GOVERNMENT**

(New renewable energy is from projects placed in service after January 1, 1999. Include projects that did not retain RECs if they qualify under the grandfather clause.)

Renewable energy project types in service during FY 2008, by age and source	Number of Projects	Annual Energy Produced	Energy Produced on Federal or Indian Land and Used at a Federal Facility
Electricity from <i>New Solar</i> projects (MWH)	0	0.0	0.0
Electricity from <i>New Wind</i> projects (MWH)	0	0.0	0.0
Electricity from <i>New Biomass</i> projects (MWH)	0	0.0	0.0
Electricity from <i>New Landfill Gas</i> projects (MWH)	0	0.0	0.0
Electricity from <i>New Geothermal</i> projects (MWH)	0	0.0	0.0
Electricity from <i>New Hydro/Ocean</i> projects (MWH)	0	0.0	0.0
Electricity from <i>Old Solar</i> projects (MWH)	0	0.0	0.0
Electricity from <i>Old Wind</i> projects (MWH)	0	0.0	100.0
Electricity from <i>Old Biomass</i> projects (MWH)	0	0.0	0.0
Electricity from <i>Old Landfill Gas</i> projects (MWH)	0	0.0	0.0
Electricity from <i>Old Geothermal</i> projects (MWH)	0	0.0	0.0
Electricity from <i>Old Hydro/Ocean</i> projects (MWH)	0	0.0	100.0
Natural Gas from <i>New Landfill/Biomass</i> projects (Million Btu)	0	0.0	0.0
Renewable Thermal Energy from <i>New</i> projects (Million Btu)	0	0.0	0.0
Other <i>New Renewable Energy (Specify Type)</i> (Million Btu)	0	0.0	0.0
Natural Gas from <i>Old Landfill/Biomass</i> projects (Million Btu)	0	0.0	0.0
Renewable Thermal Energy from <i>Old</i> projects (Million Btu)	0	0.0	0.0
Other <i>Old Renewable Energy (Specify Type)</i> (Million Btu)	0	0.0	0.0
Total New Renewable Electricity (MWH)	0	0.0	0.0
Total Old Renewable Electricity (MWH)	0	0.0	0.0
Total New Non-Electric Renewable Energy (Million Btu)	0	0.0	0.0
Total Old Non-Electric Renewable Energy (Million Btu)	0	0.0	0.0
Total Renewable Energy Generation (Million Btu)	0	0.0	0.0

**1-5. ON-SITE RENEWABLE ENERGY GENERATION WHERE RECS ARE NOT RETAINED BY THE GOVERNMENT**

(This energy is only counted toward the renewable energy goal if the agency has enough new RECs to qualify for the on-site bonus.)

	Amount Produced or Used	Amount Qualified for Goal
Renewable energy reported here comes from projects: 1) placed in service <b>after 1/1/1999 (New)</b> ; 2) where RECs have not been retained by the government; 3) where the amount has not been reported elsewhere on this data report; and 4) where the energy or RECs have not been sold to another agency that is counting it toward their renewable energy goal. (MWH)	0.0	0.0
Renewable energy reported here must come from projects: 1) placed in service <b>before 1/1/1999 (Old)</b> ; 2) where RECs have not been retained by the government; 3) where the amount has not been reported elsewhere on this data report; and 4) where the energy or RECs have not been sold to another agency that is counting it toward their renewable energy goal. (MWH)	0.0	0.0

**1-6. RENEWABLE ENERGY/RENEWABLE ENERGY CERTIFICATE PURCHASES IN FY 2008**

(New renewable energy is from resources developed after January 1, 1999)

Type of Renewable Energy Purchase (Two rows are provided for each type. Insert additional rows as necessary for purchases of same type for different end-use categories (Goal or Excluded) or purchase terms (Short or Long). Insert rows between each color-coded category.)	Total Amount Purchased (MWH)	Total Amount Purchased (Million Btu)	Annual Cost (Thou. \$)	Portion of Total Purchased from Projects on Federal or Indian Lands	FY 2008 Goal Application Renewable Energy Goal (RE) Energy Efficiency Goal (EE) Credit	Purchase Term (Enter: Short or Long)	End Use Category (Enter: Goal or Excluded)	Total Amount Purchased for Goal Buildings (Billion Btu)	Total Amount Purchased for Excluded Fac. (Billion Btu)
Electricity from <i>New</i> Renewable Source	1,242.2		\$65.3	0.0	RE: 100% EE-Credit: Up to 5.4% reduction for short-term and 7.2% reduction for long-term.	Short	Goal	4.2	0.0
Electricity from <i>New</i> Renewable Source	0.0		\$0.0	0.0	RE: 100% EE-Credit: Up to 5.4% reduction for short-term and 7.2% reduction for long-term.	Long	Excluded	0.0	0.0
Electricity from <i>Old</i> Renewable Source	10,674.7		\$690.7	0.0	RE: Up to 1.5% of total electricity use. EE-Credit: Up to 5.4% reduction for short-term and 7.2% reduction for long-term.	Short	Goal	36.4	0.0
Electricity from <i>Old</i> Renewable Source	0.0		\$0.0	0.0	RE: Up to 1.5% of total electricity use. EE-Credit: Up to 5.4% reduction for short-term and 7.2% reduction for long-term.	Long	Excluded	0.0	0.0

**1-7. GOAL-ELIGIBLE RENEWABLE ELECTRICITY USE AS A PERCENTAGE OF FACILITY ELECTRICITY USE**

(Calculated from input above per FEMP Renewable Energy Guidance)

Components of Eligible RE Use	Renewable Electricity Use (MWH)	Total Facility Electricity Use (MWH)	RE as a Percentage of Electricity Use
<b>Eligible Renewable Electricity Total</b>	<b>3,855.0</b>	<b>174,183.9</b>	<b>2.2%</b>
New Renewable Electricity (without Bonus)	1,242.2		
Bonus, Federal or Indian Land	0.0		
Eligible Old Renewable Electricity	2,612.8		

**1-8. ALL RENEWABLE ENERGY USE (INCLUDING NON-ELECTRIC) AS A PERCENTAGE OF FACILITY ELECTRICITY USE (WITHOUT BONUS)**

(Calculated from input above for information only)

All Renewable Energy Use (Billion Btu)	Total Facility Electricity Use (Billion Btu)	RE as a Percentage of Energy Use
40.7	594.3	6.8%

**1-9. WATER USE INTENSITY AND COST**

Potable Water	Annual Consumption (Million Gallons)	Annual Cost (Thou. \$)	Facility Gross Square Feet (Thou.)	Gallons per Gross Square Foot
Buildings & Facilities Subject to Water Goal	294.3	\$2,321.1	6,837.4	43.0
				Percent
Approx. percentage of reported water consumption that is estimated:				0%
Is the FY 2007 agency water intensity baseline preliminary or final?				Final

**PART 2: ENERGY EFFICIENCY IMPROVEMENTS**

**2-1. DIRECT AGENCY OBLIGATIONS**

	FY 2008		Projected FY 2009	
	(Million Btu)	(Thou. \$)	(Million Btu)	(Thou. \$)
Direct obligations for facility energy efficiency improvements, including facility surveys/audits		\$6,570.8		\$1,177.0
Estimated annual savings anticipated from obligations	4,995.4	\$95.6	419.5	\$13.1

**2-2. ENERGY SAVINGS PERFORMANCE CONTRACTS (ESPC)**

	Annual savings (Million Btu)	(number/Thou. \$)
Number of ESPC Task/Delivery Orders awarded in fiscal year & annual energy (MMBTU) savings.	0.0	0
Investment value of ESPC Task/Delivery Orders awarded in fiscal year.		\$0.0
Amount privately financed under ESPC Task/Delivery Orders awarded in fiscal year.		\$0.0
Cumulative guaranteed cost savings of ESPCs awarded in fiscal year relative to the baseline spending.		\$0.0
Total contract award value of ESPCs awarded in fiscal year (sum of contractor payments for debt repayment, M&V, and other negotiated performance period services).		\$0.0
Total payments made to all ESPC contractors in fiscal year.		\$0.0

**2-3. UTILITY ENERGY SERVICES CONTRACTS (UESC)**

	Annual savings (Million Btu)	(number/Thou. \$)
Number of UESC Task/Delivery Orders awarded in fiscal year & annual energy (MMBTU) savings.	0.0	0
Investment value of UESC Task/Delivery Orders awarded in fiscal year.		\$0.0
Amount privately financed under UESC Task/Delivery Orders awarded in fiscal year.		\$0.0
Cumulative cost savings of UESCs awarded in fiscal year relative to the baseline spending.		\$0.0
Total contract award value of UESCs awarded in fiscal year (sum of payments for debt repayment and other negotiated performance period services).		\$0.0
Total payments made to all UESC contractors in fiscal year.		\$0.0

**2-4. METERING OF ELECTRICITY USE**

FY	Standard Meters		Advanced Meters		Appropriate Buildings	
	Cumulative # of Buildings Metered	Cumulative % of Electricity Metered	Cumulative # of Buildings Metered	Cumulative % of Electricity Metered	# of Appropriate Buildings for Metering	Cumulative % of Buildings Metered
2008	522	80.5%	7	19.5%	529	100.0%
2009 planned	517	70.7%	12	29.3%	529	100.0%

**2-5. FEDERAL BUILDING ENERGY EFFICIENCY STANDARDS**

	Number of New Building Designs
Total new building designs started since beginning of FY 2007:	18
Total new building designs started since beginning of FY 2007 that are expected to be 30 percent more energy efficient than relevant code, where life-cycle cost effective:	2
	Percent
Percent of new building designs started since beginning of FY 2007 that are expected to be 30 percent more energy efficient than relevant code, where life-cycle cost effective:	11%

**2-6. TRAINING**

	(number)	(Thou. \$)
Number of personnel trained in FY 2008/Expenditure	44	\$55.6

**AGENCY COMPILATION WORKSHEET FOR CREDIT FOR PROJECTS THAT INCREASE SITE ENERGY USE BUT SAVE SOURCE ENERGY**

(See [http://www.eere.energy.gov/femp/pdfs/sec502e\\_%20guidance.pdf](http://www.eere.energy.gov/femp/pdfs/sec502e_%20guidance.pdf))

**EPACT Goal Subject Buildings**

Name of Project Saving Source Energy in Current Fiscal Year (insert additional rows as necessary)	Annual Site Energy Increase with the Project	Annual Source Energy Saved with the Project	Adjustment to Annual Site Energy
	(Million Btu)	(Million Btu)	(Million Btu)
Project No. 1	0.0	0.0	0.0
Project No. 2	0.0	0.0	0.0
Project No. 3	0.0	0.0	0.0
Totals	0.0	0.0	0.0

**EPACT Excluded Facilities**

Name of Project Saving Source Energy in Current Fiscal Year (insert additional rows as necessary)	Annual Site Energy Increase with the Project	Annual Source Energy Saved with the Project	Adjustment to Annual Site Energy
	(Million Btu)	(Million Btu)	(Million Btu)
Project No. 1	0.0	0.0	0.0
Project No. 2	0.0	0.0	0.0
Project No. 3	0.0	0.0	0.0
Totals	0.0	0.0	0.0
