

# What's the **Big Deal** About Whole Grains?

You may have heard that eating whole grains is good for your body. But what is a whole grain? Why is it good for you? How can you eat more whole grains? Find the answers! Read, then take the Whole Grains Quiz...

- ◆ Wheat, rice, oats, cornmeal, and barley are examples of grains. Bread, tortillas, pasta, oatmeal, and breakfast cereals are made from grains.
- ◆ There are two types of grains — whole grains and refined grains. Whole grains contain the entire grain kernel, the bran, germ, and husk.
- ◆ When you eat foods made from whole grains, you are eating vitamins, minerals, and fiber. This helps you be healthy, feel good, and reduce your risk for cancer.
- ◆ Remember whole grains are just a part of your meals. Have plenty of vegetables, and some fruit and protein.
- ◆ Sometimes it's hard to figure out if a food is made of whole grains.
- ◆ Foods marked **multi-grain, stone-ground, 100% wheat, cracked wheat, seven grain or bran** are usually **not** 100% whole-grain products. They may not contain any whole grain.
- ◆ **Read the ingredients list on the package. Choose foods that name a whole grain ingredient first on the list: whole wheat, whole grain, brown rice, or whole oats.**
- ◆ You can eat more whole grains for **breakfast**: eat oatmeal instead of frosted, sugary cereal.
- ◆ You can eat more whole grains for **lunch**: eat a sandwich made from whole wheat or whole grain bread instead of white bread.
- ◆ You can eat more whole grains for **supper**: eat brown rice or wild rice instead of white rice. Or eat a corn or whole wheat tortilla instead of a white flour tortilla.
- ◆ You can eat more whole grains for a **snack**: eat popcorn or whole wheat crackers instead of chips.
