

Silver Treatment for Teeth

QUICK

EASY

PAIN-FREE

- Stops cavity from growing
- May fix teeth without shots or drilling
- Helps avoid hospital dental visits
- May not have to pull baby teeth before they are ready

STEPS of silver treatment

The cavity is dried and a drop of the silver is painted on the cavity.

During the treatment, the cavity will turn black.

After the last treatment, a sealant or filling can cover the black.

THINGS

YOU

SHOULD

KNOW

ABOUT

SILVER

ION

TREATMENT

- The process only takes a few minutes
- Your provider will tell you how many times you will need to have it painted on
- The cavity will harden and turn black
- The silver liquid can stain skin or clothing
- If a cavity is big or hurts we may choose a different treatment
