# Are you prepared for a dental emergency?

Presentation 1

#### Toothache

- Rinse the mouth with warm water to clean it out.
- Gently use dental floss or an interdental cleaner to remove any food or other debris that may be caught between the teeth.
- Never put aspirin or any other painkiller against the gums near the aching tooth. This could burn gum tissue.
- If the toothache persists, try to see the dentist. Don't rely on painkillers.
  They may temporarily relieve pain but your dentist should evaluate the condition.

### Knocked-out (avulsed) tooth

- Try to find the tooth! This may not be as easy as you think if the injury took place on a playground, basketball court or while skateboarding, so try to stay calm.
- Hold the tooth by the crown and rinse the root in water if the tooth is dirty. Don't scrub it or remove any attached tissue fragments.
- If it's possible, gently insert and hold the tooth in its socket while you head to the dentist. If that's not possible, put the tooth in a cup of milk and bring it to the dentist.
- Time is critical for successful re-implantation, so try to get to your dentist immediately.

#### Broken tooth

- Pinse your mouth with warm water to clean the area.
- Use cold compresses on the outside of the cheek to help reduce the swelling.
- Get to the dentist as soon as possible.

# Tongue or lip bites or wounds

- Clean the area gently with a clean cloth and apply cold compresses to reduce any swelling.
- If the bleeding can't be controlled, go to a hospital emergency room or clinic.
- You may able to reduce bleeding from the tongue by pulling it forward and using gauze to put pressure on the wound.

## Objects caught between teeth

Try to gently remove the object with dental floss.

 Never use a sharp instrument to remove any object that is stuck between your teeth.

 If you can't dislodge the object with floss, contact your dentist.

## Possible broken jaw

- Apply cold compresses to control swelling.
- Get to the hospital emergency room immediately.
