Will fluoride varnish help my teeth?

Presentation 2

Cavities in young children

- By the age of 2, two of every five American Indian or Alaska Native children have tooth decay.
- Children that get cavities at an early age:
 - ► Have more difficulty in learning to speak
 - Sometimes have problems with self-esteem from other kids teasing them
 - Miss more school or Head Start because of pain or infections with the teeth
 - Have more problems eating and chewing their food because of tooth pain

Why are baby teeth important?

- Eating and nutrition
- Holding space for permanent teeth
- Talking
- Smiling

What is fluoride varnish?

- It is a substance that can be applied to teeth to help prevent cavities
- It was first used in 1964
- Studies have shown that fluoride varnish helps prevent many cavities....as much as a 45% reduction in new cavities

Don't I already get enough fluoride?

- You may, but fluoride varnish has the highest concentration of fluoride!
 - ► Fluoridated water around 1 part per million of fluoride
 - Toothpaste around 1,500 parts per million of fluoride
 - Mouthrinses up to around 1,000 parts per million of fluoride
 - Fluoride from the dentist around 12,000-19,000 parts per million of fluoride
 - ► Fluoride varnish 22,600 parts per million of fluoride

How is fluoride varnish applied?

- Teeth are dried with gauze
- Fluoride varnish is then painted on your child's teeth with a brush by your dental health care professional or another health care professional
- ► Fluoride varnish is most effective when applied 3-4 times each year

Who should get fluoride varnish?

- Children and adult who are at risk of getting cavities
- Your dental health care professional will let you know if you can benefit from fluoride varnish

Help prevent cavities!

- Remember that fluoride varnish is just one part of preventing tooth decay in your child. Other ways to prevent cavities are:
 - Brush your child's teeth twice a day
 - Reduce sugary foods, especially sticky foods like candy, from your child's daily diet
 - Have your dentist apply dental sealants to the chewing surfaces of your child's teeth
 - Visit your dentist, dental hygienist, or dental therapist regularly
