

THE INDIAN HEALTH SERVICE

TIU Data Objects

Superior Health Information Management
Now and for the Future

Goals & Objectives

- Define an Object.
- Compare and Contrast TIU Objects and VA Health Summary Objects.
- Describe type of Objects that can be created using TIU Objects.
- Describe type of objects that can be created using the VAHS Objects.
- Create Health Summary Flowsheet Objects.

What is an object?

- A line of code that points to specific RPMS data.
- Once the code is inserted into a note the data is retrieved from the RPMS file and automatically populates the text into the note.
- Objects are surrounded by straight brackets when they are inserted into a note template.

| BMI WITH CAPTION |

Objects

- Does EHR have objects available to use right after it is installed or do I have to create all of them?
 - EHR comes with standard objects ready for use:
 - Medication
 - Allergies
 - BMI
 - Demographic Information
 - Immunizations
 - Problem List
 - Visit Orders, CPT/POV codes, Patient Education, Procedures, etc.

Objects

- What kind of objects can you make?

DATE LAST NOTE (SAMPLE)	I
LAST # LAB TEST (SAMPLE)	I
LAST # VITAL SIGN (SAMPLE)	I
LAST DIAGNOSIS DATE - SAMPLE	I
LAST EXAM - SAMPLE	I
LAST HEALTH FACTOR - SAMPLE	I
LAST LAB PANEL (SAMPLE)	I
LAST LAB TEST (SAMPLE)	I
LAST MED (SAMPLE)	I
LAST MED CLASS (SAMPLE)	I
LAST PROCEDURE DATE - SAMPLE	I

Objects

- Can you IMPORT and EXPORT objects with your note templates?
 - All objects embedded in a note template will be exported and imported:
 - Only the standard objects will be imported.
 - If you create site specific objects (i.e. lab) those objects will be imported with the note template, however you will get a message telling you which objects are not compatible with your sites EHR note templates.
 - When this occurs you can replace the imported object with your sites locally created object.

Objects

- TIU Objects:
 - Requires programming access
 - Appearance is different
 - Allows you to pull in data directly from the RPMS package (i.e. lab, pharmacy, etc.)
- VA Health Summaries Objects:
 - Does not require programming access
 - Need to have the VAHS patch released in the Summer 2006
 - Allows you to pull in data from the health summary (i.e. women's health data, flowsheets, etc.)

Programmer Access Required to Create or Copy TIU Data Objects

Find Detailed Display/Edit Copy/Move
Change View Try Quit
Create Owner

Select Action: Next Screen// COPY

Using Copy for a new TIU object

- Copy can be used if the program that finds the object data is generic.
- For the lab objects, the lookup routine passes the lab test name as a parameter so it can be used to copy.
- Copy can also be used for note titles, immunizations, health factors.
- Use the Create Objects option on the Document Definitions (Manager) menu on the TIU Maintenance Menu.

Using Copy

- Using copy only works if the routine has a parameter for the item to find.
 - `S X=$$LASTHF^BTIULO2(+$G(DFN),"FACTORNAME")`
- Other objects such as this one for allergies do not have a parameter that could be copied.
 - `S X=$$MAIN^TIULADR(DFN,1,"^TMP("TIULADR",,$J)",0)`

New TIU Object

```
Select Entry to Copy: (29-42):  
40
```

```
Copy into (different) Name:  
LAST LAB TEST (SAMPLE)// LAST  
MAGNESIUM
```

```
OBJECT copied into File Entry  
#1302
```

```
Press RETURN to continue or '^'  
or '^ ^' to exit:
```

Please test the new object and activate it when it is ready for users to embed it in boilerplate text.

1. Pick the lab test to copy making sure it is visible on the screen.
2. Give it a new name.
3. Press return a couple of times.
4. It now needs to be edited.

New TIU Object

The screenshot shows a window titled "Cache TRM:2044" with a menu bar (File, Edit, Help) and a status bar (Oct 20, 2004 15:15:52, Page: 4 of 10). The main area displays a list of objects with a "+" sign on the left and "Status" on the right. A context menu is open over the list, showing options like "?Help", ">ScrollRight", "PS/PL PrintScrn/List +/-", "Find", "Change View", "Create", "Detailed Display/Edit", "Try", "Owner", "Copy/Move", and "Quit".

	Objects	Status

Object LAST MAGNESIUM

Basics
  Name:      LAST MAGNESIUM
  Abbreviation:
  Print Name:
  Type:      OBJECT
  IFN:       1302
  National
  Standard:  NO
  Status:    INACTIVE
  Owner:     CLINICAL COORDINATOR

Technical Fields
  Object Method:  S X=$$SLAB^BTIUPCC (DFN, "CALCIUM")

? Help      +, - Next, Previous Screen      PS/PL
Basics      Try                          Delete
Technical Fields  Find                          Quit
Select Action: Quit//
```

Edit – part 2

- Edit the technical fields and change the name to the new one.

- Be sure you know the real laboratory name.

Select Action: Quit// TEC Technical Fields

OBJECT METHOD:

```
S X=$$SLAB^BTIUPCC(DFN,"LAB TEST NAME")
```

Replace LAB TEST NAME With MAGNESIUM

- Edit the Basic fields and make it active.
- User must be defined as a Clinical Coordinator.

Object LAST MAGNESIUM

Basics

Name: LAST MAGNESIUM

Abbreviation:

Print Name:

Type: OBJECT

IFN: 1302

National

Standard: NO

Status: ACTIVE

Owner: CLINICAL COORDINATOR

Technical Fields

Object Method: S X=\$\$SLAB^BTIU PCC (DFN,"MAGNESIUM")

? Help +, - Next, Previous Screen PS/PL

Basics	Try	Delete
Technical Fields	Find	Quit

Select Action: Quit//

New Objects

- Once activated, this object will appear in the list of objects when making a template.
- Users need to log off and back on to the EHR before the new objects display.

Creating Objects without Programmer Access

- Another way to make objects is to create health summary objects.
- Health summary types and components **MUST** be VA health summary types.
- Most IHS components have been converted to VA HS components.

Creating VA HS Objects

- 1st step:
 - BEHO - RPMS-EHR Configuration Master Menu
 - RPT - Report Configuration
 - HSM - Health Summary Configuration
 - VHA - VHA Health Summary Configuration
 - BLD - Build Health Summary Type Menu
 - EDT - Create/Modify Health Summary Type
 - Select Health Summary Type:
 - Setup Occurrence Limit and/or a Time Limit

Creating VA HS Objects

- 2nd Step:
 - TIU Menu for Medical Records
 - TIU Maintenance Menu
 - Document Definitions (Manager)
 - Create TIU/Health Summary Objects with the same name you created in the first step
- 3rd Step:
 - Test the object you created in EHR

VA HS Object

----- SLT - Lab Tests Selected (max 10 occurrences or 1 year) -----

Collection DT	Specimen	Test Name	Result	Units	Ref Range
01/18/2007 12:04	SERUM	CREATININE-SFIH	7.1 H	mg/dL	.6 - 1.3
11/20/2006 09:16	SERUM	CREATININE-SFIH	6.7 H	mg/dL	.6 - 1.3
10/23/2006 09:06	SERUM	CREATININE-SFIH	5.8 H	mg/dL	.6 - 1.3
09/11/2006 09:21	SERUM	CREATININE-SFIH	6.1 H	mg/dL	.6 - 1.3
08/07/2006 09:54	SERUM !!	CREATININE-SFIH	6.4 H	mg/dL	.6 - 1.3
06/08/2006 09:25	SERUM	CREATININE-SFIH	5.8 H	mg/dL	.6 - 1.3
05/10/2006 14:57	SERUM	CREATININE-SFIH	5.3 H	mg/dL	.6 - 1.3
03/31/2006 09:05	SERUM	CREATININE-SFIH	5.7 H	mg/dL	.6 - 1.3
03/10/2006 09:00	SERUM	CREATININE-SFIH	5.5 H	mg/dL	.6 - 1.3

!! Indicates COMMENTS AVAILABLE...Refer to Interim Lab Report.

10/23/2006	: 8.9	:	5.6 H	:		:	3.5

Lessons Learned

- Only create 5-10 TIU objects & VAHS Objects at a time and then test them out in EHR to make sure they work before moving onto the next batch.
- Test the objects on patients that have the data in their files – i.e. lab.
- If you find that your VAHS object works in some patients but not others – review your occurrence and time limit settings.
- If you can not determine why a TIU object is not working contact the package administrator to make sure that you have the right name for the object – i.e. lab.
- When you edit objects in VAHS you do not have to log off of EHR and back on – the effects “should” work immediately after you make your changes you only have to log off and back on when creating the object.
- Create a local folder in the shared templates folder with local site objects for providers to click and drop into their notes – too many objects can clutter a note.

Questions and Discussion
