1.0 Pharmacy Configuration

1.1 Outpatient Site File

Verify that the Outpatient Site File has been configured with a pharmacy division. If a pharmacy division does not exist, set up the pharmacy division before starting the Pharmacy Configuration process.

1. Open the PSO Outpatient Pharmacy Manager Menu.

   **Note:** Sometimes this menu is locked with the PSOMCORE key.

2. Select the Pharmacy Division.

3. Select the Supervisor Functions Menu.

4. At the Select Outpatient Pharmacy Manager Option prompt, type SUPERVISOR FUNCTIONS

5. At the Select Supervisor Functions Option prompt, type SITE PARAMETER ENTER/EDIT.

6. At the Select SITE NAME prompt, type the site name.

7. At the “Would you like to see all site parameters for this division” prompt, type YES.

8. Navigate to the PRESCRIPTION # UPPER BOUND and increase the number to 999,999,999 if not already defaulted to this number.

9. Locate the parameter CPRS ORDERING INSTITUTION and verify that the facility displays in the prompt.

   Figure 1-1 may have prompts that vary from your site.

   **Note:** Do NOT change any of the fields in this menu unless specifically instructed to modify a parameter. Altering any other field in this menu could cause problems with the pharmacy package.

OUTPUT FROM WHAT FILE: OUTPATIENT SITE//
Select OUTPATIENT SITE NAME: DEMO PHARMACY 1946
ANOTHER ONE:
STANDARD CAPTIONED OUTPUT? Yes// (Yes)
Include COMPUTED fields: (N/Y/R/B): NO// - No record number (IEN), no Computed Fields
NAME: W.W. TESTING
MAILING FRANK STREET ADDRESS: 100 S. BLISS
AREA CODE: 918
MAILING FRANK ZIP+4 CODE: 74464
MAILING FRANK CITY: TAHLEQUAH
LABEL/PROFILE MONITOR MAX: 1000
VERIFICATION: YES
RENEWING RX’S ALLOWED: YES
PROFILE WITH NEW PRESCRIPTIONS: NO
CANCEL DRUG IN SAME CLASS: NO
ASK METHOD OF PICKUP: NO
PROFILE ‘SORT BY’ DEFAULT: DATE
DRUG CHECK FOR CLERK: NO
MULTI RX REQUEST FORM: NO
SCREEN PROFILES: YES
SLAVED LABEL PRINTING: YES
NEW LABEL STOCK: NO
NARCOTIC LOWER BOUND: 0
LAST NARCOTIC NUMBER ISSUED: 2231706
METHADONE PROGRAM: NO
PRESCRIPTION # LOWER BOUND: 1
PRESCRIPTION # UPPER BOUND: 999999999

If the division is not set up under the CPRS ORDERING INSTITUTION, complete this setup before proceeding.

Note: Multi-Divisional sites will need to define an Outpatient Site File for each division. Once they define the Outpatient Site File the site will need to setup the CPRS Ordering Institution for EACH division and complete parameter setup including APSP Control Pharmacy File, BEHORX, and APSP parameters.

1.2 APSP Control Pharmacy File

The APSP CONTROL PHARMACY FILE contains three parameters that must be reviewed and/or configured for auto-finish. Locate the following prompts and verify that your site’s configuration aligns with the required auto-finish configuration.

1. Navigate to the (PIHS) IHS-Specific Pharmacy Options [APSP MAIN MENU].

   Note: Sometimes this menu is locked with the PSORPH key.

2. At the prompt, type the local division name and press Enter.

3. Repeatedly press Enter to navigate through the remaining pharmacy prompts.
4. At the next menu select the IHS PHARMACY SITE PARAMETERS when prompted to select an IHS Specific Pharmacy Option.

5. Type the APSP Control Pharmacy System name to review the current settings.

6. Repeatedly press **Enter** to navigate through the remaining prompts to reach the field DEFAULT PATIENT STATUS to verify that the default status is OUTPATIENT.

7. At the DEFAULT OTHER LOCATION verify that the name of the local facility is displayed.

8. Repeatedly press **Enter** to navigate through the remaining prompts to reach the field called AUTORELEASE RX; type YES.

9. Repeatedly press **Enter** to navigate through the remaining prompts to reach the PHARMACY VISIT LOCATION field. Type the name of the local pharmacy clinic (i.e. PHARMACY)

Figure 1-2 may have prompts that vary from your site.

**Note:** Change ONLY those fields outlined above. Altering any other field in this menu could cause issues with the pharmacy package. Changes should be avoided unless you are instructed otherwise.

2.0 Print Configuration

2.1 Rx Print Format (Template) Editor Set Up

Use the Rx Print Format (Template) Editor Set Up to add the Rx Template Editor to an EHR template. Follow these steps:

1. In Design mode, select Desktop Properties from the Design menu to open the Properties for Desktop dialog:

![Properties for Desktop dialog]

2. Select Customize Menus from the Property list.

3. Click the plus sign (+) to add a new menu item.

4. Rename the item “Rx Template Editor.”

Note: Optionally, add a “Print Rx” menu with Rx Template Editor and Rx Print Config as submenus (as shown in Figure 2-1).
5. With **Rx Template Editor** highlighted, click the lightning bolt to open the **Rx Template Editor** dialog.

6. In the **Edit action** field type:
   
   `$\text{BEHRXGENERATORSERVICE.RXGENERATOR.edittemplates}$
   
7. Click **OK** to close the dialog and return to the **Properties for Desktop** dialog.

8. Click **Apply** and **OK**.

9. Select **Required Services** from the **Design** menu to display the **Select Required Services** dialog:

![Select Required Services dialog](image)

Figure 2-2: Options on **Select Required Services** dialog

10. Ensure that **BEH Rx Generator Service** is selected:

   - If not, select it.

11. Click **OK** to close the dialog and save any changes.

   **Note:** This option should only be placed on the EHR GUI template for those responsible for editing these formats, for example, the CAC, and designated pharmacy personnel.

### 2.2 Rx Printer Preferences Editor Set up

Follow these steps:

1. In **Design mode**, select **Desktop Properties** from the **Design** menu to open the **Properties for Desktop** dialog (Figure 2-1).
2. Select **Customize Menus** from the **Property** list.

3. Click the plus sign (+) to add a new menu item.

4. Rename the item “Rx Printer Config” (Figure 2-3).

   **Note:** Optionally, add a “Print Rx” menu with the Rx Template Editor and Rx Printer Config as submenus (as shown in Figure 2-3).

5. With **Rx Template Editor** highlighted, click the lightning bolt to open the **Rx Template Editor** dialog.

6. In the **Edit action** field type:

   ```
   $(BEHRXGENERATORSERVICE.RXGENERATOR.EditPrinterPreferences)
   ```

   ![Figure 2-3: Rx Printer Config dialog](image)

7. Click **OK** to close the dialog and return to the **Properties for Desktop** dialog.

8. Click **Apply** and **OK**.

9. Select **Required Services** from the **Design** menu to display the **Select Required Services** dialog (Figure 2-2).
10. Ensure that **BEH Rx Generator Service** is selected:
   - If not, select it.

11. Click **OK** to close the dialog and save any changes.

12. Exit Design Mode to verify the placement of the new Rx Print Settings Menu.

13. Using RPMS, allocate the BEHORX PRINT key for CAC/IT staff that will be responsible for setting up the Location, Division, or System settings.

   **Note:** Users without the BEHORX PRINT key will only be able to set their own defaults. If the site does not want users to be able to set their own defaults, only add this menu option to EHR GUI templates for those users who are allowed to set this parameter.

14. Depending on the site set up, a drop down displays after the user selects Rx Print settings from the menu bar.

   ![Figure 2-4: Drop down menu selection for Rx Print settings](image)

15. Select **Rx Print Editor** to display the **Edit Med Order Templates** dialog (Figure 2-5).

   ![Figure 2-5: Edit Med Order Templates dialog](image)
**Note:** There are six default templates for prescribing delivered with EHRp9 (Table 2-1). The site must determine the templates to implement during EHR patch 9 setup. The e-Prescribing team will help configure the Receipt during the e-Prescribing setup phase. Sample templates have been provided to all sites and allow for minor configuration in order to quickly implement.

Template types and formats include:

Figure 2-6: Sample default template of Demo Patient
TIP: Default templates for each template type are delivered with EHRv1.1p9. Naming conventions for these ends with (SAMPLE).

Figure 2-7: Edit Med Order Templates dialog showing the location of Template Type

The following section gives a brief overview of the Template editor.

- **Active On.** Sets activation date of the template (usually Yesterday at 6:00 am).

  TIP: Use Yesterday at 6:00 am when activating a template. This will enable the template for use immediately otherwise sites will have to wait up to 24 hours for template to be active.

- **Preview.** Displays a preview of the current template.

- **Import.** Imports templates that may have been developed by IHS OIT staff or other sites.

- **Export.** Exports templates for other sites.

  TIP: To copy a template, export then import. Users will be prompted for a name for the template on import so provide a local name, set “active on” date then make changes. It is highly recommend to use the copy process and create local templates rather than editing nationally delivered default templates.
• **Add Free Text.** Sites may add as many free text as required/needed. Site may configure the free text to include header information for format, alternate signature lines, etc.

• **Mark Inactive,** Inactivates template so users cannot select.

• **Change font.** A site can select a font that is consistent with their policies and procedures.

• **Fields.** Set fields for inclusion, change print labels, and set lines and columns in the Fields group box. Sites can determine which fields are displayed by checking or un-checking the check boxes associated with the field.

### 2.2.1 Export Process

To export templates from the Edit Med Order Templates dialog:

1. Select **Rx Print Editor** to display the **Edit Med Order Templates** dialog:

   ![Edit Med Order Templates dialog showing selecting Template Type](image)

   **Figure 2-8 : Edit Med Order Templates** dialog showing selecting **Template Type**

2. Select the **Template Type.**
3. Select the Template to export.

4. Click Export to display the Select Template dialog:

5. Choose the location in which to save; name the file by prefacing the site name or abbreviations to the template name.

6. Click Save.

Once complete, the final list of templates should have the site name or abbreviation in front of each template name.
Table 2-2: Template Types and Formats

<table>
<thead>
<tr>
<th>Definition</th>

</tr>
</tbody>
</table>

2.2.2 Import Process

With a copy of the template specific to the site, import the template and then configure the free text entries to include information for the site.

To import templates from the **Edit Med Order Templates** dialog:

1. Select **Rx Print Editor** to display the **Edit Med Order Templates** dialog:

![Figure 2-11: Selecting the template type](image)

2. Select the **Template Type**.
3. Click **Import** to display the **Select Template** dialog:

![Select Template dialog]

**Figure 2-12: Selecting the file to import**

4. Select the file to import.

5. Click **Open** to start the import and display the **Template Name** dialog:

![Template Name dialog]

**Figure 2-13: Change the template name, if needed**

6. Change the **Template Name**, if necessary.

7. Click **OK** to complete the import and return to the **Edit Med Order Templates** dialog:
8. Click **Active On** to display a calendar.

9. Select yesterday’s date and set the time to **6:00 am**; click **Ok**.

**Note:** You MUST set an active date to allow users to select this template (and to be able to edit the template). If the “active on” date is today, it may not be available for up to 24 hours. For this reason, we strongly recommend setting the “active on” date to yesterday at 6:00am.

10. Edit the template.

11. Click **OK** to save.

With the template imports complete, update the free text entries to align with facility information, and set the active date. Complete the parameter BEHO PRINT FORMATS to associate the template type to the facility’s format template.

**Please note that the font size button in the template editor does not change once you activate the template at this time.**
3.0 Parameters Configuration

Use the following parameters to configure the remaining auto-finish and e-Prescribing setup. Configuring these parameters requires access to the General Parameter Tools [XPAR MENU TOOLS] menu. This menu is normally configured and maintained by the local site IT and Clinical Applications Coordinator (CAC).

1. Navigate to the **XX GENERAL PARAMETER TOOLS** menu.

Select CPRS Configuration (IRM) Option: xx  General Parameter Tools

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LV</td>

</table>

Select General Parameter Tools Option: ep  Edit Parameter Values

--- Edit Parameter Values ---

Select PARAMETER DEFINITION NAME:

![Figure 3-1: CPRS Configuration Option screen](image)

3.1 BEHORX PRINT LABEL

3.1.1 Functionality

The BEHORX PRINT LABEL parameter can be set to expose the Label radio button option on the dialog that launches from the Print button on the Medication Management component as shown Figure 3-2 and Figure 3-3. This parameter can be configured on a Division or System level.

![Figure 3-2: Print Outpatient Medications dialog](image)

**Note:** This parameter is *not* required but optional for sites depending on their current setup and workflows.
3.1.2 Configuration

1. Select the menu option **EP EDIT PARAMETER VALUES**.

2. At the prompt, type **BEHORX PRINT LABEL**

3. When prompted, select **SYSTEM**.

**Note**: A multi-divisional institution using multiple label printers may need to configure this parameter under the DIVISION.

Select PARAMETER DEFINITION NAME:
BEHORX PRINT LABEL Enable Print Label Feature

BEHORX PRINT LABEL may be set for the following:

<table>
<thead>
<tr>
<th>Division</th>
<th>Template Type</th>
<th>Site Specific Template Formats</th>
</tr>
</thead>
<tbody>
<tr>
<td>800</td>
<td>PC:RX CII</td>
<td>(Site Name) Prescription (CII)</td>

<td>LC:LABEL CII</td>
<td>Cannot configure at this time</td>
</tr>
</tbody>
</table>

Figure 3-3: BEHORX PRINT LABEL Enable Print Label Feature screen

3.2 BEHORX PRINT FORMATS

3.2.1 Functionality

This parameter associates the format type with the format template in the new print functionality released with EHR patch 9. It may be set at the User, Class, Location, Division, and System level. Most sites will configure this parameter on a System or Division Level.

The values for this parameter include:

Table 3-1: BEHORX Print Formats
### Definition

| Label Non-Controlled | LN:LABEL NON-CII | Cannot configure at this time |

**Note:** The label formats are currently hard coded and cannot be changed. This will be allowed in a future EHR patch.

### 3.2.2 Configuration

1. Select the menu option **EP EDIT PARAMETER VALUES** and at the prompt, type **BEHORX PRINT FORMATS**

2. When prompted select the **SYSTEM** level in order to configure this parameter.

   **Note:** A multi-divisional institution using multiple label printers may need to configure this parameter under the DIVISION Level

3. Sites can configure to meet needs but the commonly set format types include:
   - PC:RX CII
   - PN:RX NON-CII
   - OC:ORDER CII
   - RN:RECEIPT NON-CII

4. See Figure 3-4 for more information on how to configure this parameter.

BEHORX PRINT FORMATS may be set for the following:

- 100 User USR [choose from NEW PERSON]
- 200 Class CLS [choose from USR CLASS]
- 300 Location LOC [choose from HOSPITAL LOCATION]
- 700 Division DIV [DEMO INDIAN HOSPITAL]
- 800 System SYS [DEMO.OKLAHOMA.IHS.GOV]

Enter selection: 800 System DEMO.OKLAHOMA.IHS.GOV

----- Setting BEHORX PRINT FORMATS for System: DEMO.OKLAHOMA.IHS.GOV -----

Select Format Type: **PN**

Format Type: PN// PN

Format: ??

Choose from:
- PRESCRIPTION (NON-CII)
- DEMO PRESCRIPTION (NON-CII)
- PRESCRIPTION (NON-CII)(SAMPLE)

Format: DEMO PRESCRIPTION (NON-CII)

Select Format Type: **PC**
3.3 BEHORX PRINT FORMAT TYPE

3.3.1 Functionality

This parameter associates a printer with a template format type. It can be configured on a User, Location, Division, or System level.

Note: This parameter can also be populated from the Rx Printer Preferences Editor if it has been setup and configured in EHR (Section 3.4).

Populate the BEHORX PRINT FORMAT TYPE parameter to associate the Format type (CII order for signature, Prescription (CII), Prescription (Non-CII), Receipt (Non-CII) with a default printer.

Table 3-2: BEHORX Print Format Types

<table>
<thead>

</tbody>
</table>

3.3.2 Configuration

1. Select the menu option EP EDIT PARAMETER VALUES and at the prompt, type BEHORX PRINT FORMATS TYPE

2. When prompted select the SYSTEM level in order to configure this parameter.
Note: If you are a multi-divisional institution using multiple label printers you may need to configure this parameter under the DIVISION Level.

3. Select the **FORMAT TYPE** when prompted and press **Enter**.

4. At the printer type in the local printer where the template will print.

5. See Figure 3-5 for more information on how to configure this parameter.

```
BEHORX PRINT FORMAT TYPE may be set for the following:

   100 User    USR    [choose from NEW PERSON]
   400 Location LOC    [choose from HOSPITAL LOCATION]
   700 Division  DIV    [DEMO INDIAN HOSPITAL]
   800 System SYS    [DEMO.OKLAHOMA.IHS.GOV]

Enter selection: 800 System  DEMO.OKLAHOMA.IHS.GOV

--- Setting BEHORX PRINT FORMAT TYPE for System: DEMO.OKLAHOMA.IHS.GOV ---

```

Figure 3-6: Values for BEHORX PRINT FORMAT TYPE
3.4 Rx Printer Preference Editor

(EHR GUI Side)

3.4.1 Functionality

The Rx Printer Preference editor is an EHR tool used to populate the BEHORX PRINT FORMAT TYPE parameter. This parameter sets the default printer for each selected Format Type using the GUI while the BEHORX PRINT FORMAT TYPES allows the site to set a default printer in RPMS.

3.4.2 Configuration

Select Rx Printer preferences from the Rx Printer settings menu to display the Printer Preferences dialog:

![Printer Preferences dialog](image)

Figure 3-7: Printer Preferences dialog

To set the **Print Prompt Behavior** (upper portion of the dialog):

1. Select the **Level** (System, Division, or Current User) from the list.
2. Select the Print Behavior option (Prompt or Don’t Prompt)
3. Click **Apply** to store the parameter.

To set the **Default Order Printer** for each template type (lower portion of the dialog):

1. Select the **Level** (System, Division, or Current User) from the list.
2. Select the chosen level’s name from the unlabeled list.
3. Select the **Template Type** from the list.
4. Select the **Printer** from the list.
5. Click **Apply** to store the parameter. To remove a parameter level, select the **Level** and click **Remove**.

### 3.5 APSP AUTO RX DIV

#### 3.5.1 Functionality

This must be configured before the APSP AUTO RX and can only be setup for divisions that have been setup in the Outpatient Site File APSP AUTO RX DIV. This parameter can be configured on a Division and System level.

#### 3.5.2 Configuration

1. Select the menu option **EP EDIT PARAMETER VALUES**.
2. At the prompt, type **APSP AUTO RX DIV**.
3. When prompted select **SYSTEM**.
4. At the PHARMACY DIVISION prompt, type the division.

```
70 Division DIV [DEMO HOSPITAL]
80 System SYS [DEMO.MEDSPHERE.COM]
```

Enter selection: 80 System DEMO.MEDSPHERE.COM

```
---- Setting APSP AUTO RX DIV for System: DEMO.MEDSPHERE.COM ----
Pharmacy Division: DEMO PHARMACY
```

Figure 3-8: APSP AUTO RX DIV configuration
3.6 APSP AUTO RX

3.6.1 Functionality

The APSP AUTO RX parameter sets the type of pharmacy based on the facility. Parameter options include: Internal, Internal/External, and External. Sites will be required to set this parameter for Auto-Finish prescribing. This parameter can be configured on a Division or System level.

Table 3-3: APSP AUTO RX Settings for Pharmacy Type Settings

<table>
<thead>
<tr>
<th>APSP AUTO RX Setting</th>
<th>Meaning</th>
</tr>
</thead>
</table>
| **Internal**         | Patients fill prescriptions written by in-house providers at only in-house pharmacies:  
                          In-house options for Clinic, Mail, Window retained  
                          CII order for signature queued to print |
| **Internal/External**| Patients fill prescriptions written by in-house providers at in-house and outside pharmacies:  
                          In-house options for Clinic, Mail, Window retained – CII order for signature queued to print  
                          Prior to Surescripts® set up/deployment, enables the “Outside Pharmacy – Print” functionality – Auto-finishes medications upon signature and queues prescription for printing  
                          After Surescripts® set up/deployment, enables the “Outside Pharmacy – eRx functionality – Auto finishes medications upon signature, transmits and queues receipt for printing |
| **External**         | No in-house pharmacy:  
                          All medication orders auto-finish upon signature  
                          Prior to Surescripts® set up/deployment, enables the Outside Pharmacy – Print” functionality – Auto finishes medication upon signature and queues prescription for printing  
                          After Surescripts® set up/deployment, enables the “Outside Pharmacy – eRx functionality – Auto finishes medications upon signature, transmits, and queues receipt for printing |

3.6.2 Configuration

1. Select the menu option **EP EDIT PARAMETER VALUES**.

2. At the prompt, type **APSP AUTO RX**.

3. When prompted select **SYSTEM** level.

4. At the **ENABLE AUTO Rx PHARMACY** type the parameter setting that best fits your facility from Table 3-3.
70 Division DIV [DEMO HOSPITAL]  
80 System SYS [DEMO.MEDSPHERE.COM]  
Enter selection: 80 System DEMO.MEDSPHERE.COM  

-------- Setting APSP AUTO RX for System: DEMO.MEDSPHERE.COM --------  
Enable Auto Rx Pharmacy as: ?  
To be enabled, the selected entity must have a RX division mapped.  
Select one of the following:  
0   INTERNAL  
1   INTERNAL AND EXTERNAL  
2   ELECTRONIC  

Enable Auto Rx Pharmacy as: INTERNAL AND EXTERNAL  

Figure 3-9: APSP AUTO RX configuration
3.7 APSP AUTO RX SCHEDULE RESTRICT

3.7.1 Functionality
Parameter is delivered as pre-placed for the allowance of electronic prescribing of controlled substances. This parameter is defaulted to schedules: 2, 3, 4, & 5.

3.7.2 Configuration
This parameter is not editable at this time.

3.8 APSP AUTO RX ERX OF CII

3.8.1 Functionality
This parameter is pre-placed for eventual allowance of electronic transmission. The default is “Null” which disallows transmission.

3.8.2 Configuration
This parameter is not editable at this time.

3.9 APSP AUTO RX ADD PRV COMMENT

3.9.1 Functionality
This parameter will add a Provider Comment to SIG. There is a field in the pharmacy order dialog called comments. With the implementation of e-Prescribing it is best that the site configure this setting to NO. There are character limitations that could cause the order to fail if the comments are attached to the final sig.

3.9.2 Configuration
1. Select the menu option EP EDIT PARAMETER VALUES.
2. At the prompt, type APSP AUTO RX ADD PROV COMMENT.
3. When prompted select SYSTEM level.
4. At the ADD PROVIDER COMMENT TO SIG type NO.

<table>

<th>70 Division</th>
<th>DIV [DEMO HOSPITAL]</th>
</tr>
</thead>
<tbody>
<tr>
<td>80 System</td>
<td>SYS [DEMO.MEDSPHERE.COM]</td>
</tr>
</tbody>
</table>

Enter selection: 80 System DEMO.MEDSPHERE.COM
3.10 APSP AUTO RX DEF PT STATUS

3.10.1 Functionality

When patients are added to the pharmacy file, there is a default patient status question asked. However, if a new patient is added to the system and this is occurring automatically, there is no user interaction. Therefore, this data must be set programmatically. This parameter can be configured on a Division or System level.

3.10.2 Configuration

1. Select the menu option **EP EDIT PARAMETER VALUES**.
2. At the prompt, type **APSP AUTO RX DEF PT STATUS**.
3. When prompted select **SYSTEM** level.
4. At the prompt **DEFAULT PATIENT STATUS** type **OUTPATIENT**.
