

## **RESOURCE AND PATIENT MANAGEMENT SYSTEM**

# **Clinical Reporting System (CRS) (BGP)**

## **Technical Manual**

**Version 5.0  
October 2004**

Information Technology Support Center  
Division of Information Resources  
Albuquerque, New Mexico

## PREFACE

This manual contains the installation manual for the CRS Clinical Reporting System version 5.0, formerly known as GPRA+, which adds FY 2005 clinical performance indicators to existing FY 2002 through FY 2004 indicators.

**NOTE:** Version 4.0 was skipped in order to synchronize the version number with the reporting year.

The CRS Clinical Reporting System is an RPMS (Resource and Patient Management System) software application designed for national reporting as well as local and Area monitoring of clinical GPRA and developmental indicators. CRS was first released for FY 2002 indicators (as GPRA+) and is based on a design by the Aberdeen Area (GPRA2000).

The Government Performance and Results Act (GPRA) requires Federal agencies to report annually on how the agency measured up against the performance targets set in its annual Plan. IHS GPRA indicators include measures for clinical prevention and treatment, quality of care, infrastructure, and administrative efficiency functions. The CRS Clinical Reporting System is the reporting tool used by the IHS Office of Planning and Evaluation to collect and report clinical performance results annually to the Department of Health and Human Services (DHHS) and to Congress.

Each year, an updated version of CRS software is released to reflect changes in the logic descriptions of the different denominators and numerators. Additional indicators may also be added. Local facilities can run reports as often as they want to and can also use CRS to transmit data to their Area. The Area Office can use CRS to produce an aggregated Area report for either annual GPRA or Area Director Performance reports.

The CRS Clinical Reporting System will produce reports on demand from local RPMS databases for both GPRA and developmental clinical indicator measures that are based on RPMS data. CRS is intended to eliminate the need for manual chart audits for evaluating and reporting clinical indicators. Administrative and clinical users will be able to review individual or all indicators at any time, and can:

- identify potential data issues in their RPMS, i.e., missing or incorrect data;
- monitor their site's performance against past national performance and upcoming agency goals;
- identify specific areas where the facility is not meeting the indicator in order to initiate business process or other changes;
- quickly measure impact of process changes on indicators;

- identify areas meeting or exceeding indicators to provide lessons learned.

To produce reports with comparable data across every facility, the GPRA indicator definition was “translated” into programming code with the assistance of clinical subject matter experts. CRS uses pre-defined taxonomies to find data items in PCC to determine if a patient meets the indicator criteria. Taxonomies contain groups of codes (e.g., diagnoses or procedures) or site-specific terms. Each indicator has one or more denominators and numerators defined.

CRS is intended for use by Area and site Quality Improvement staff, Compliance Officers, GPRA Coordinators, clinical staff such as physicians, nurses, nurse practitioners, and other providers, Area Directors, as well as any staff involved with quality assurance initiatives.

## 1.0 Implementation and Maintenance

The CLINICAL REPORTING SYSTEM occupies the BGP namespace. Options, security locks/keys, templates, routines, and globals are namespaced BGP.

### 1.1 System Requirements

- Kernel v8.0 or higher
- FileMan v21 or higher
- IHS Patient Dictionaries (AUPN) v99.1 through patch 13
- PCC Management Reports v3.0 through patch 14
- Taxonomy System v5.1
- XB/ZIB Utilities v3.0 through patch 9

## 2.0 Security Keys

Name	Descriptive Name	Description
BGPZAREA	BGP AREA REPORT	This key unlocks the area report options on the main BGPMENU. This key should only be assigned at the Area office level.
BGPZMENU	BGP MAIN MENU - CRS	This key unlocks the main CRS menu. It should be assigned to all users who need to run GPRA/CRS reports.

## 3.0 Routines

## 4.4 Table File

**NOTE:** The following 13 files have over 1,000 fields per file. These files are used to hold calculated data values for the GPRA reports. The table files are not listed here to conserve space in this document. If you want a listing use the ^XBFLD or FM data dictionary listing utility to list the data dictionary in detail

## 6.2 Callable Routines

There are no published entry points in this package.

## 6.3 Exported Options

Option Name	Description
BGP 02 MENU	GPRA+ FY02 menu
BGP 03 AREA AREA	Run AREA Annual Clinical Repor
BGP 03 AREA MENU	Area Options
BGP 03 EDIT SITE PARAMETERS	Site Parameters
BGP 03 MAIN MENU	GPRA+ FY03 menu
BGP 03 MENU REPORTS	Reports menu
BGP 03 MENU SETUP	System Setup menu
BGP 03 RPT AREA PERF	Run Area Annual Performance Re
BGP 03 RPT GPRA AREA EXPT	Run GPRA Report for Area Expor
BGP 03 RPT LOCAL USE	Run Indicator Reports for Loca
BGP 03 TAXONOMY CHECK	Check for Taxonomies Required
BGP 03 TAXONOMY SETUP	Taxonomy Setup
BGP 03 UPLOAD TO AREA	Upload Report Files from Site

<b>Option Name</b>	<b>Description</b>
BGP FAC TO AREA RPT PERIOD	Run Area Annual Report for Export
BGP GPRA AREA REPORT	Run AREA GPRA Report
BGP GPRA FAC TO AREA RPT	Run FY Report for Export to Area
BGP GPRA LOCAL REPORT	Run GPRA Report for Local Use
BGP GPRA UPLOAD FILE	Upload GPRA Data File from Site
BGP INDICATOR 32 TESTS	Enter/Edit Indicator 32 Lab Test
BGP TAXONOMY CHECK	Check for Taxonomies Required
BGPMENU	IHS GPRA Performance Indicator
BGP 04 AREA AREA	Run AREA Annual Clinical Report (Area Only)
BGP 04 AREA DIR REPORT	Area Director's Performance Report
BGP 04 AREA GPRA	Run Area GPRA Report
BGP 04 AREA HEDIS	Run Area HEDIS Report
BGP 04 AREA MENU	Area Options
BGP 04 HEDIS REPORT	HEDIS Report
BGP 04 MAIN MENU	GPRA+ FY04
BGP 04 REPORT GPRA	GPRA Report
BGP 04 REPORTS MENU	Reports
BGP 04 SEL ALL PATS	Selected Indicators with No Community defined
BGP 04 SEL PATIENT PANEL	Selected Indicators w/Patient Panel Population
BGP 04 SELECTED IND REPORT	Selected Indicators Report
BGP 04 SITE PARAMETERS	Site Parameters
BGP 04 SYSTEM SETUP	System Setup
BGP 04 TAXONOMY CHECK	Check for Taxonomies Required by FY 04 GPRA Report
BGP 04 TAXONOMY SETUP	Taxonomy Setup
BGP 04 UPLOAD FILES	Upload Report Files from Site
BGP 05 AREA GPRA	Run AREA National GPRA Report
BGP 05 AREA HEDIS	Run Area HEDIS Report
BGP 05 AREA MENU	Area Options
BGP 05 CMS PERF RPT MENU	CMS Performance Report
BGP 05 HEDIS AREA REPORT	Run AREA HEDIS Report
BGP 05 HEDIS REPORT	HEDIS Performance Report
BGP 05 HOSPITAL REPORTS	Hospital Reports
BGP 05 LIST FILES	List files in a directory
BGP 05 LOCAL REPORTS MENU	Reports for Local Use: IHS Clinical Indicators
BGP 05 MAIN MENU	CRS 2005
BGP 05 MENU NATIONAL	National GPRA Reports
BGP 05 NATIONAL GPRA REPORT	National GPRA Report
BGP 05 NATIONAL PAT LISTS	National GPRA Report Patient List

BGP 05 OTHER CMS REPORTS	Other CMS Reports
BGP 05 OTHER NTL RPTS MENU	Other National Reports
BGP 05 REPORTS MENU	Reports
BGP 05 SEL ALL PATS	Selected Indicators w/All Communities
BGP 05 SEL PATIENT PANEL	Selected Indicators w/Patient Panel Population
BGP 05 SELECTED IND REPORT	Selected Indicators w/Community Specified
BGP 05 SITE PARAMETERS	Site Parameters
BGP 05 SYSTEM SETUP	System Setup
BGP 05 TAXONOMY CHECK	Check for Taxonomies Required by National GPRA Rpt
BGP 05 TAXONOMY SETUP	Taxonomy Setup
BGP 05 UPLOAD FILES	Upload Report Files from Site

## 7.0 Internal Relations

All users should be given the access to the appropriate options and keys to them, as needed. All of the options in this system stand alone.

## 8.0 How to Generate Online Documentation

The file number range for this package is 90240 and 90370. The namespace is BGP. All templates, routines, screen forms, etc. begin with BGP.

This section describes some of the methods by which users can generate IHS RPMS CLINICAL Reporting system technical documentation. Online technical documentation pertaining to the IHS RPMS CLINICAL REPORTING Reporting software, in addition to that which is located in the help prompts and on the help screens throughout the IHS RPMS CLINICAL Reporting package, can be generated through the use of several Kernel options. These include, but are not limited to, the following:

- %INDEX
- Menu Management
- Inquire Option
- Print Option File
- VA FileMan
- Data Dictionary Utilities
- List File Attributes

Entering question marks at the “Select...Option” prompts can also provide users with valuable technical information. For example, a single question mark (?) lists all options that can be accessed from the current option. Entering two question marks (??) lists all options accessible from the current one, showing the formal name and lock for each. Three question marks (???) displays a brief description for each option in a menu, whereas an option name preceded by a question mark (?OPTION) shows extended help, if available, for that option.

For a more exhaustive option listing and further information about other utilities that supply online technical information, please consult the DHCP Kernel Reference manual.

### 8.1 %INDEX

This option analyzes the structure of a routine to determine in part if the routine adheres to RPMS Programming Standards. The %INDEX output can include the following components:

- Compiled list of errors and warnings
- Routine listing
- Local variables
- Global variables
- Naked globals

- Label references
- External references

By running %INDEX for a specified set of routines, you are afforded the opportunity to discover any deviations from RPMS Programming Standards that exist in the selected routines and to see how routines interact with one another (i.e., which routines call or are called by other routines).

To run %INDEX for the IHS RPMS CLINICAL Reporting package, specify the BGP namespace at the Routine(s)?> prompt.

## 8.2 Inquire Option

This menu management option provides the following information about a specified option:

- Option name
- Menu text
- Option description
- Type of option
- Lock (if any)

In addition, all items on the menu are listed for each menu option. To secure information about IHS RPMS CLINICAL REPORTING Reporting options, you must specify the BGP namespace.

## 8.3 Print Option File

This utility generates a listing of options from the Option file (#19). You can choose to print all of the entries in this file or you can specify a single option or range of options. For a list of IHS RPMS CLINICAL Reporting options, please refer to the Exported Options section of this manual.

## 8.4 List File Attributes

This VA FileMan option allows you to generate documentation pertaining to files and file structure. Using the Standard format of this option yields the following data dictionary information for a specified file:

- File name and description
- Identifiers
- Cross-references
- Files pointed to by the file specified
- Files that point to the file specified input, print, and sort templates

In addition, the following applicable data is supplied for each field in the file:

- Field name, number, title, and description
- Global location
- Help prompt
- Cross-references
- Input transform
- Date last edited
- Notes

Using the Global Map format of this option generates an output that lists the following information:

- All cross-references for the file selected
- Global location of each field in the file
- Input, print, and sort templates

For a comprehensive listing of CLINICAL package files, please refer to the files section of this manual.

## **9.0 SAC Exemptions**

This program uses a standard global for export of data to the Area office. The global is called ^BGPDATA( and is killed at the root level in various routines.

The kill of these unsubscripted globals has been approved by the Standards and Conventions committee.

## 10.0 Glossary

Archiving	The storing of historical or little-used data off-line (often on tape).
Banner	A line of text with a user's name and domain.
Browser	An interactive application that displays ASCII text on a terminal that supports a scroll region. The text can be in the form of a word-processing field or sequential local or global array. The user is allowed to navigate freely within the document.
Callable Entry Points	Places in a routine that can be called from an application program.
Cross-reference	An indexing method whereby files can include pre-sorted lists of entries as part of the stored database. Cross-references (x-refs) facilitate look-up and reporting.
Entry Point	Entry point within a routine that is referenced by a "DO" or "GOTO" command from a routine internal to a package.
File	A set of related records or entries treated as a single unit.
FileMan	The database management system for RPMS.
Global	In MUMPS, global refers to a variable stored on disk (global variable) or the array to which the global variable may belong (global array).
ICD	International Classification of Diseases.
INDEX (%INDEX)	A Kernel utility used to verify routines and other MUMPS code associated with a package. Checking is done according to current ANSI MUMPS standards and RPMS programming standards. This tool can be invoked through an option or from direct mode (>D ^%INDEX).
IRM	Information Resource Management. The IHS personnel responsible for information systems management and security.

Kernel	The set of MUMPS software utilities that function as an intermediary between the host operating system and application packages, such as Laboratory and Pharmacy. The Kernel provides a standard and consistent user and programmer interface between application packages and the underlying MUMPS implementation. These utilities provide the foundation for RPMS.
Menu	A list of choices for computing activity. A menu is a type of option designed to identify a series of items (other options) for presentation to the user for selection. When displayed, menu-type options are preceded by the word “Select” and followed by the word “option” as in Select Menu Management option: (the menu’s select prompt).
Namespace	A unique set of 2 to 4 alpha characters that are assigned by the database administrator to a software application.
Option	An entry in the Option file. As an item on a menu, an option provides an opportunity for users to select it, thereby invoking the associated computing activity. Options may also be scheduled to run in the background, non-interactively, by TaskMan.
Patient Care Component (PCC)	The central repository for data in the Resource and Patient Management System (RPMS).
Queuing	Requesting that a job be processed at a later time rather than within the current session.
Routine	A program or sequence of instructions called by a program that may have some general or frequent use. MUMPS routines are groups of program lines that are saved, loaded, and called as a single unit via a specific name.
UCI	User Class Identification: a computing area.
Up-Hat (^)	A circumflex, also known as a “hat” or “caret,” that is used as a piece delimiter in a global. The up-hat is denoted as “^” and is typed by pressing Shift+6 on the keyboard.
Utility	A callable routine line tag or function. A universal routine usable by anyone.

---

Variable	A character or group of characters that refers to a value. MUMPS recognizes 3 types of variables: local variables, global variables, and special variables. Local variables exist in a partition of the main memory and disappear at sign-off. A global variable is stored on disk, potentially available to any user. Global variables usually exist as parts of global arrays.
----------	--

## 11.0 Appendix A: LOINC Codes Used by CRS

Standard code sets are used to standardize data and mitigate variations in local terminologies for lab and other healthcare procedures, allowing for comparison and analysis. Logical Observations, Identifiers, Names, and Codes (LOINC) is a standard coding system originally initiated for Laboratory values. The system is being extended to include non-laboratory observations (vital signs, electrocardiograms, etc.).

IHS began integrating LOINC values into RPMS in several pilot sites in 2002; by the end of FY 2003, over 25 sites had converted to LOINC codes for their lab tests. GPRA+ software began to incorporate LOINC codes into its logic for the new indicators included in version 2.1. For version 5.0, LOINC taxonomies have been included for all appropriate indicators.
