8.0 Internal Relations

Users should be given access to the appropriate options and keys, as needed. All of the options in this system stand alone.
9.0 External Relations

9.1 External Calls

The following list indicates the external calls made by the system to other RPMS packages:

<table>
<thead>
<tr>
<th>Routine Called</th>
<th>Invoked By</th>
</tr>
</thead>
<tbody>
<tr>
<td>AUPNPAT</td>
<td>BRNADD+48, BRNPTR+64, BRNRD+17, BRNRLU+22, BRNRLU+23, BRNRLU+24</td>
</tr>
<tr>
<td>VADPT</td>
<td>BRNU</td>
</tr>
</tbody>
</table>

9.2 Published Entry Points

None.
10.0 Archiving and Purging

There is no archiving and purging in this package.
11.0 Generating Online Documentation

This section describes a few methods to generate Release of Information Disclosure System technical documentation. Online ROI software technical documentation, in addition to that which is located in the help prompts throughout the ROI package, can be generated through the use of several Kernel options. These include, but are not limited to, the following:

- %INDEX
- Menu Management
- Inquire Option
- Print Option File
- VA FileMan
- Data Dictionary Utilities
- List File Attributes

Typing `?` at the “Select . . . Option” prompt will provide online technical information.

- A single question mark (?) lists all options that can be accessed from the current option.
- Two question marks (??) list all options accessible from the current one, showing the formal name and lock for each.
- Three question marks (???) display a brief description for each option in a menu.
- An option name preceded by a question mark (?OPTION) shows extended help, if available, for that option.

For a more exhaustive option listing and further information about other utilities that supply online technical information, consult the DHCP Kernel Reference manual.

11.1 %INDEX

This option analyzes the structure of a routine to determine in part if the routine adheres to RPMS programming standards. The %INDEX output can include the following components:

- Compiled list of errors and warnings
- Routine listing
- Local variables
- Global variables
- Naked globals
- Label references
• External references

Running %INDEX for a specified set of routines, allows users to discover any deviations from RPMS programming standards that exist in the selected routines and to see how routines interact with one another (i.e., which routines call or are called by other routines).

To run %INDEX for the ROI package, type the BRN namespace at the Routine(s)?> prompt.

11.2 List File Attributes

This VA FileMan option allows users to generate documentation pertaining to files and file structure. Using the standard format of this option yields the following data dictionary information for a specified file:

• File name and description
• Identifiers
• Cross-references
• Files pointed to by the file specified
• Files that point to the file specified
• Input, print, and sort templates

In addition, the following applicable data is supplied for each field in the file:

• Field name, number, title, and description
• Global location
• Help prompt
• Cross-references
• Input transform
• Date last edited
• Notes

Using the Global Map format of this option generates an output that lists the following information:

• All cross-references for the file selected
• Global location of each field in the file
• Input, print, and sort templates
12.0 SAC Requirements / Exemptions

There are no exemptions to the SAC standards for this version.
