Resource and Patient Management System (RPMS)

RPMS/JVN PACS GIS Interface Patch 3

Patch 3 Release Notes and Installation Notes

GIS Version 3.01
November 2002
(Last Revised 01/08/2003)

Information Technology Support Center
Division of Information Resources
Albuquerque, New Mexico
PREFACE
This document describes how to install the RPMS/JVN PACS GIS Interface included in the GIS Version 3.01, Patch 1 release and specific configuration needed prior to using the interface. The document will also describe the new functionality that the RPMS system gains with the RPMS/JVN PACS GIS Interface.

1.0 INTRODUCTION

1.1 Overview

The RPMS/JVN PACS Interface makes it possible to electronically transmit RPMS patient demographic and clinic appointment information to the Joslin Vision Network (JVN). This information is then merged with the scanned image taken during the screening process to deliver a more comprehensive packet to the Joslin Network for review.

1.2 New Functionality

This new software is used in conjunction with the JVN Imaging equipment to transmit each patient’s demographic and appointment information to the JVN system. Two new menu options will be available after installation of the RPMS/JVN PACS GIS Interface. There are two methods, based on the configuration of your RPMS system, to use these options.

1.2.1 RPMS Scheduling Package

If your site has and uses the RPMS Scheduling module, you may use one menu option to enter and send individual patient information manually to the JVN system. This will primarily be used for walk-ins to the Retinal Imaging-JVN clinic. The second menu option will search through the next day’s appointments within the RPMS Scheduling Module to find appointments scheduled for the Retinal Imaging-JVN clinic and transmit patient information to the JVN system. This option will be queued to run as a nightly job in TaskMan by your site’s Information Resource Manager (IRM) and will not be used manually.

1.2.2 Non-RPMS Scheduling

If your site does not have or does not use the RPMS Scheduling module, you will use the manual menu option to enter and send individual patient information to the JVN system. This will have to be used for each patient seen by the Retinal Imaging-JVN clinic. For example, the menu option will have to be used to send each patient’s information to the JVN database prior to each patient’s screening.
1.3 Skills Required to Install the RPMS/JVN PACS GIS Interface

The individual who installs this patch must be able to perform the following activities in order to proceed with the install:

- Have the programmer security key
- Have rights to the System Manager Menu option
- Add Menu Options to user’s menus
- Schedule jobs in TaskMan
- Be able to backup Mumps routines (%RS)
- Be able to restore Mumps routines (%RR)
- Be able to backup Mumps globals (%GS)
- Be able to restore Mumps globals (%GR)
2.0 Installation Notes

PREFIX: GIS
CURRENT VERSION: 3.01

Note: Read entire notes file prior to attempting any installation

- Make a copy of this distribution for off-line storage.
- Print all notes/readme files.
- If you received this distribution on tape media please remember to return the tape to the originator.
- It is recommended that the terminal output during the installation be captured using an auxiliary port printer attached to the terminal at which you are performing the software installation. This will insure a printed audit trail should any problems arise.
- Read this manual before starting the install

2.1 Namespace

This interface will be appended to the existing GIS modules, including:

IHS Generic Interface System           Namespace: BHL, INH

2.2 Package Dependencies

Installation of the following packages must be accomplished for RPMS/JVN PACS GIS Interface to function properly.

- VA Kernel     8.0 or higher
- VA FileMan    21.0 or higher
- GIS Version 3.01 with patch 2
2.3 Contents of Distribution

- `gis_0301.03k` Contains all routines and files needed for the JVN PACS Interface
- `gis_0301.03g` Package export global
- `gis_0301.03n.pdf` Installation Notes Version 3.01, Patch 3
- `gis_0301.03o.pdf` Version 3.01, Patch 3 User Manual Addendum

2.4 Required RPMS Resources

- VA Kernel V8.0 or higher
- VA FileMan V21.0 or higher
- MailMan V 7.1 or higher
- Generic Interface System V3.01 through patch 2
- IHS Scheduling (SD), Version 5.0

2.5 File Range

The RPMS/JVN PACS GIS Interface utilizes the same files as the Generic Interface System. The installation of the RPMS/ JVN PACS GIS Interface will append an additional interface into the existing GIS module. This will create a seamless interaction between the RPMS/ JVN PACS GIS Interface and all other interfaces defined at the site in GIS.

GIS (Generic Interface System): 4000-4999.999

2.6 Global Placement/Description

The RPMS/ JVN PACS GIS Interface installation will only MERGE new data into existing GIS globals. Please refer to the GIS manuals for further detail.

2.7 Required Joslin Resources

Please see your Joslin representative for the minimum hardware and software requirements for their system.
3.0 Pre-Installation Requirements

The minimum hardware and software requirements must be met on both the RPMS system and the JVN PACS system prior to the installation of the GIS Interface Version 3.01, Patch 1.

**Note:** If GIS is NOT currently installed on your RPMS system, STOP and install GIS 3.01 before continuing this section.

3.1 Overview

After the generic GIS install is completed, install the RPMS/ JVN PACS GIS Interface KIDS. The data dictionaries should already be in the system from the generic GIS install, thus the RPMS/ JVN PACS GIS Interface KIDS will only MERGE the data to the globals and add the protocols to the protocol file.

3.2 RPMS Modules

Verify that minimum requirements (section 2.4) have been met.
4.0 **Installation**

Estimated time to install the RPMS/JVN PACS GIS Interface is less than 5 minutes. Expect approximately 30 minutes to complete the post installation.

**Warning**: Do not continue unless the RPMS software is backed up.

Steps to be performed:

1. Kill `^INXPORT Global`
2. Global Restore from file `gis_0301.03g`
3. Access Kernel Installation & Distribution System (KIDS)
4. Load a Distribution
5. Verify Checksums in Transport Global
6. Print the Transport Global
7. Install Package

4.1 **Kill `^INXPORT Global`**

Do K `^INXPORT` at the programmer prompt.

4.2 **Global Restore from file `gis_0301.03g`**

D `%GR` for file `gis_0301.03g` at the programmer prompt.

4.3 **Access the Kernel Installation and Distribution System (KIDS)**

To access the Kernel Installation & Distribution System, select the Systems Management Menu (EVE), select the programmer option (PROG), and select the KIDS option (KIDS) (Figure 4-1).

<table>
<thead>
<tr>
<th>Select OPTION NAME: <strong>EVE</strong></th>
<th>Systems Manager Menu</th>
</tr>
</thead>
<tbody>
<tr>
<td>Core Applications ...</td>
<td>FM VA FileMan ...</td>

</tbody>
</table>
4.4 Load a Distribution

To load the distribution, select the Installation option (INSTALLATION) from the KIDS menu, Select the Load a Distribution option (1), and type the host file name (Figure 4-2).
Select Kernel Installation & Distribution System Option: **INSTALLation**

1. Load a Distribution
2. Verify Checksums in Transport Global
3. Print Transport Global
4. Compare Transport Global to Current System
5. Backup a Transport Global
6. Install Package(s)
   Restart Install of Package(s)
7. Unload a Distribution

Select Installation Option: 1  Load a Distribution
Enter a Host File: D:\J110NT-SHARE\gis_0301.03k

KIDS Distribution saved on Feb 21, 2002@12:32:44
Comment: GIS JVN Interface

This Distribution contains Transport Globals for the following Package(s):
   GIS JVN Interface 3.01

Want to Continue with Load? YES//Y

5.0 **POST-INSTALLATION**

After the generic GIS and the RPMS/JVN PACS GIS Interface KIDS have been installed, the following manual adjustments must be made to insure proper installation and functioning of the RPMS/ JVN PACS GIS Interface.

5.1 **Verify Transaction Types**

Check the parent and child TRANSACTION TYPES.

- Both must be ACTIVE
- The child must have the Destination field defined as HL IHS JVN PACS
- The child has the parent Transaction Type defined
- The script generated is defined
- The IN/OUT field is set to OUT for this interface

Select OPTION NAME: GIS INTERFACE MENU INH MAIN MENU GIS Interface Menu

TCM  Transaction Control Menu ...
FTM  File and Table Menu ...
EM   Error Menu ...
BPM  Background Process Control Menu ...
SM   Script Menu ...
SGM  Script Generator Menu ...
IHS  IHS User Menu ...

Select GIS Interface Menu Option: FTM  File and Table Menu

TTE  Transaction Type Enter/Edit
DE   Destination Entry/Edit
BPE  Background Process Entry/Edit
RMD  Replicate message to destinations

Select File and Table Menu Option: TTE  Transaction Type Enter/Edit

Select Transaction Type: **HL IHS JVN PACS O01 OUT CHILD**

```
*** Transaction Type Definition, Screen 1 of 2 ***

Name: HL IHS JVN PACS O01 OUT CHILD
In/Out: OUT                           Active: ACTIVE  ➩ Must be active
Destination: HL IHS JVN PACS ➩ Must be defined
Script: Generated: HL IHS O01 JVN PACS-O
Parent: HL IHS O01 JVN PACS OUT PARENT
Dependency: Retry Rate:               Max # of attempts:
Acknowledgement expected from remote: Application Ack Conditions:
Acknowledgement Message:
Format Controller---Priority:         Process time:
Output Controller---Priority:         Process Time:
```
5.2 Verify Background Processes

Check Background Process Control:

- IP address and the Port numbers are correctly entered for the PACS Broker.
- “TRANSMIT” is part of the name for the Background Process Control, so that it will show up in the QSIZE option.
- The Destination field is populated, for this interface it should contain HL IHS JVN PACS as the destination.

```
TTE       Transaction Type Enter/Edit
DE        Destination Entry/Edit
BPE       Background Process Entry/Edit
RMD       Replicate message to destinations
```

Select File and Table Menu Option: **BPE** Background Process Entry/Edit

Select BACKGROUND PROCESS: **HL IHS JVN PACS TRANSMITTER**

```
*** Background Process Entry/Edit ***     Screen 1 of 3

SA  Start all Background Processes
SH1  Shutdown a Process
5.4.3 Start the JVN PACS Transmitter

Start this transmitter after all other background processes have been activated and started.

5.5 Create Retinal Imaging-JVN Clinic

Each site will have to create a new clinic specifically for the JVN PACS Interface. This clinic will be used to transmit clinic information to the JVN system. It will also be used to loop through the IHS Scheduling Module in RPMS to collect and transmit...
next day appointments to the JVN system. The pre-transmission function only applies to sites using the RPMS Scheduling package.

**Note:** This clinic may become a standard IHS clinic and clinic stop in the near future.

5.6 Attach the New BHL JVN Option to User’s Menus

The installation of the RPMS/JVN PACS GIS Interface will add two new options to your system. One option will need to be attached to the users designated as the JVN Imagers. The other option will need to be scheduled in TaskMan to run as a nightly job, only if your site utilizes the SD IHS Scheduling package.

Attach the BHL JVN ENTER/SEND APPT INFO, shown in chart below, to the Imager’s primary menus in RPMS.

<table>
<thead>
<tr>
<th>Option Name</th>
<th>Menu Text</th>
<th>Description</th>
</tr>
</thead>
<tbody>

</tr>
</tbody>
</table>
5.7 Schedule BHL JVN NIGHT JOB In TaskMan

The installation of the RPMS/JVN PACS GIS Interface will add two new options to your system, one of which needs to be scheduled in TaskMan to run as a nightly job, but only if your site utilizes the SD IHS Scheduling package.

If your site uses the SD IHS Scheduling package and if you would like to transmit the Retinal Imaging-JVN clinic appointments to the JVN system in advance, you may schedule the BHL JVN NIGHTJOB in TaskMan.

The BHL JVN NIGHT JOB option will loop through the Scheduling File (#44) and screen for all appointments for the next day in the Retinal Imaging-JVN clinic. HL7 O01 messages will be generated for each future appointment found and transmitted to the JVN system.
