Revision History

Version	Date	Author	Section	Page Number	Summary of Change
v2.6 p37	01/2023	Shonda Render			Updated to use new template and everything since v2.6 was released

Preface

The purpose of this manual is to provide technical information about the Third Party Billing (ABM) package. The ABM package is designed to automate the creation of a claim using existing RPMS data, allow editing, print a bill, and track payment activity

The ABM system consists of a set of MUMPS (M) routines, VA FileMan-compatible files and templates, VA Kernel options, and security keys. This manual provides the ADP Site Managers with a technical description of the ABM routines, files, menus, cross-references, globals, and other necessary information required to effectively manage this system.

1.0 Introduction

The Third Party Billing System (ABM) Version 2.6 Patch 37 is primarily a maintenance release to catch up through the current patch, Patch 37.

All routines, files, options, and keys are namespaced starting with the letters “ABM.”

The file number range for this package is 9002274.01 – 9002274.9.

2.0 Orientation

This manual provides the ADP Site Managers with a technical description of the ABM routines, files, menus, cross-references, globals, and other necessary information required to effectively manage this system.

The ABM system consists of a set of MUMPS (M) routines, VA FileMan-compatible files and templates, VA Kernel options, and security keys.

3.0 Implementation and Maintenance

3.1 General Information

After installation of the package, the Claim Generator, option ABM TSK VISIT CHECK, must be queued to run nightly. If the Claim Generator aborts instead of completing processing normally or is not run at all, users of the ABM package will see a warning that the claim generator has not run since the last time it completed normally.

All site parameters are set and table maintenance is done through user options described in the User Manual.

3.2 System Requirements

Package	Minimum Version
VA Kernel (XU)	v8.0 patch 1019
VA FileMan (DI)	v22.0 patch 1019
IHS Dictionaries/Pointers (AUT)	v98.1 patch 26
IHS Dictionaries (AUPN)	v99.1 patch 26
ICD Update (AUM)	V10.1 or later
IHS Code Set Versioning (BCSV)	V1.0 patches 1, 2, 3
Third Party Billing (ABM)	v2.6 patch 36

3.3 Package-wide Variables

There are no package-wide variables associated with the ABM system. All namespace variables are deleted upon exiting a menu.

3.4 Security Keys

The following ABM security keys lock Kernel menus.

Key Name	Description
ABMDZ ADD CLAIM MANUALLY	Allows access to manually add claims that have not been created automatically using PCC or APC data.
ABMDZ CANCEL CLAIM	Allows access to the CLAIM/BILL MANAGEMENT Menu.
ABMDZ CE CLOSE CLAIM	If assigned you will have the option to close a claim within the claim editor.

Key Name	Description
ABMDZ CLMAUTOSPLIT	Locks the options to manually and automatically split claims in STIN, SCIN options
ABMDZ EDIT CLAIM AND EXPORT	Allows access to the Claim Editor and Export menus.
ABMDZ ELIGIBILITY EDIT	Allows access to edit the third party eligibility information.
ABMDZ EMP PROD REPORT	Users with this key can run the Employee Productivity Report for everyone, not just themselves
ABMDZ FEE SCHEDULE	Allows access to the Fee Schedule Maintenance option.
ABMDZ MANAGEMENT	Allows access to the Claim/Bill Management menu.
ABMDZ MU PV SETUP	Locks MU report parameters
ABMDZ NONPCC	Allows access to adding claims that have not been auto created thru PCC.
ABMDZ PAYMENT POSTING	Allows access to the Payment Posting option.
ABMDZ SURP SUMMARY CLM LIST	Locks SURP report because the patient's SSN is displayed
ABMDZ TABLE MAINTENANCE	Allows access to the Third Party Table Maintenance menu.
ABMDZ UFMS SUPERVISOR	Allows access to the UFMS supervisor menu.
ABMDZ VCRP CO/DEP VISITS	Locks VCRP report because the patient's SSN is displayed
ABMDZ VET VISITS	Locks VTRP report because the patient's SSN is displayed
ABMZMENU	Allows access to the Third Party Billing system.

7.0 External Relations

The ABM system makes extensive use of the documented entry points into FileMan, the device handler, and TaskMan.

7.1 Callable Routines

The following table lists the external calls made by the system to other RPMS packages.

This application uses the “AUPN DISPLAY PPN” parameter functionality and is defaulted to OFF until Patient Preferred Name (PPN) is available across the enterprise. NOTE: While this parameter is turned off, the Patient Preferred Name will not display in this application. This allows the Patient Preferred Name display to be turned on at once without requiring a coordinated release of all applications. Once all applications support the display of the PPN, instructions will be sent out on how to enable this parameter system-wide.

Routine Called	Description
KILL^AG	Used to clean up AG and FileMan variables
AGED4	Obsolete; the routine contains this call, but the option that calls the routine isn't used anymore

8.0 Internal Relations

The only menu that should be assigned to users is ABMMENU. However, there are no options that assume that the entry/exit logic of another option has already occurred.

All files in the range 9002274.1 to 9002274.9 must be present for the software to run correctly.

9.0 Archiving and Purging

There is no provision for archiving any data from Third Party Billing.

Auto purging occurs for unapproved claims older than the number of days in field #.28, INACTIVE DAYS BEFORE PURGE in the Third Party Site Parameters file. If the field is left blank, the default is 180 days.

Entries in the 3P Bill file are never purged.

Claims with a corresponding bill are not auto purged. Auto purging is done by the Claim Generator. In addition, individual claims can be deleted from the Claim file by the user option to Cancel Claim, although these claims are not actually deleted but instead are moved to the 3P Cancelled Claims file.

Cancelled bills are marked as deleted and not actually deleted from the bill file.

Bills should not be deleted from the FileMan file.

10.0 Documentation Resources

This section describes a few methods to generate online technical documentation.

10.1 System Documentation

Online VPS system documentation can be generated through the use of several Kernel options, including, but not limited to:

- %INDEX
- Menu Management
- Inquire Option
- Print Option File
- VA FileMan
- Data Dictionary Utilities
- List File Attributes

For more option listings and further information about other utilities that supply online technical information, see the Decentralized Hospital Computer Program (DHCP) Kernel Reference manual.

10.1.1 %INDEX

The %INDEX option analyzes the structure of a routine to determine in part, if the routine adheres to RPMS programming standards. The output can include the following components:

- Compiled list of errors and warnings
- Routine listing
- Local variables
- Global variables
- Naked globals
- Label references
- External references
- Running %INDEX for a specified set of routines allows users to discover any deviations from RPMS programming standards that exist, and to see how routines interact with one another (i.e., which routines call or are called by other routines).
- To run %INDEX for the VPS system:
- At the “Routine(s)?” prompt, type the <<CC>> namespace.

10.1.2 Inquire Options

The Inquire menu management option provides the following information about a specified option:

- Option name
- Menu text
- Option description
- Type of option
- Lock (if any)

In addition, all items on the menu are listed for each menu option. To secure information about Third Party Billing options, specify the ABM namespace.

10.1.3 Print Option File

The Print Option File utility generates a listing of options from the Option file (#19). Users can print all of the entries or a single option or range of options.

10.1.4 List File Attributes

This VA FileMan option allows users to generate documentation pertaining to files and file structure. The standard format of this option provides the following data dictionary information for a specified file:

- File name and description
- Identifiers
- Cross-references
- Files pointed to by the file specified
- Files that point to the file specified
- Input, print, and sort templates

In addition, the following applicable data is supplied for each field in the file:

- Field name, number, title, and description
- Global location
- Help prompt
- Cross-references
- Input transform
- Date last edited
- Notes

Using the Global Map format of this option generates an output that lists the following information:

- All cross-references for the file selected
- Global location of each field in the file
- Input, print, and sort templates

For a comprehensive listing of <<package name>> files, see Section 6.0.

10.2 Online Help

In addition to system documentation, RPMS includes special help displays for most menu options and data entry prompts. Typing ? at the “Select . . . Option” prompt displays information related to the current option, where

Typing . . .	Displays . . .
one question mark (?)	a list of all options accessible from the current option.
two question marks (??)	a list of all accessible options and their formal names
three question marks (???)	a brief description for each option in a menu.
one question mark (?) followed by an option name (?OPTION)	extended help, if available, for that option

11.0 SAC Requirements and Exemptions

Currently, there are no exemptions for ABM.

Glossary

Accident/TORT Related Insurance

Insurance covering accidents resulting from a third party's action. A third party's action may involve a civil court process in an attempt to require payment by the third party, other than no fault liability. Also includes no fault automobile insurance.

Ambulatory Care

All types of health services that are provided on an outpatient basis, in contrast to services provided in the home or to persons who are hospital inpatients.

Ambulatory Surgery

Surgery performed as an outpatient visit at a HCFA approved facility.

Archiving

The storing of historical or little-used data off-line (often on tape).

Auto Approve

An option available in this package that automatically approves claims and generates bills without user intervention.

Banner

A line of text with a user's name and domain.

Callable Entry Points

Locations in a routine that can be called from an application program.

Caret (^)

A circumflex, also known as a "hat" or "up-hat" that is used as a delimiter in a global. The up-hat is denoted as "^" and is typed by pressing Shift+6 on the keyboard.

Claim

A set of codes and fees grouped together to bill the responsible party for services rendered.

Claim Editor

Software that allows users to make modifications to third party insurance claims and to approve those claims within the third party billing software.

Claim Generator

Software that runs in the background that gathers data from PCC and patient registration in order to generate claims.

Claim Number

Number assigned to the claim, which will be sent to a billable entity.

Claim Summary

Abbreviated summary of key information in the claim.

Coinsurance

The portion of percentage of the Medicare-approved amount that a beneficiary is responsible for paying.

Covered Days

Number of days covered by the primary payer, as qualified by the payer organization.

Cross-reference

An indexing method in which files can include pre-sorted lists of entries as part of the stored database. Cross-references (x-refs) facilitate look-up and reporting.

Deductible

The amount of expense a beneficiary must pay before insurance benefits begin payment for covered services.

Diagnosis

Identifying a disease from its signs and symptoms.

Discipline

Code indicating discipline(s) order by physician.

Drug File

List of drugs that can be dispensed to a patient during a visit. The medications available for selection are restricted to whatever entries exist in the Drug file at each site. This file is maintained by the Pharmacy and should reflect all locally prescribed take home drugs.

Electronic Media Claims (EMC)

Electronic transmissions of claims.

Eligibility

A defined period of time that a patient is enrolled in prepaid health programs.

Entry Point

Entry point within a routine that is referenced by a “DO” or “GOTO” command from a routine internal to a package.

Event Type

A message that is sent, which signifies a particular event on the system (e.g., admit, discharge, etc.).

Fee-for service

A payment system by which doctors, hospitals, and other providers are paid a specific amount for each service performed as identified by a claim for payment.

Fee Schedule

Medicare’s system for paying physicians fees. The schedule, which went into effect on January 1, 1992, assigns a dollar value to each physician service based on work, medical practice costs, and malpractice insurance costs. Each of these three factors is adjusted for the geographic variation in costs.

File

A set of related records or entries treated as a single unit.

FileMan

The database management system for RPMS.

Global

In MUMPS, global refers to a variable stored on disk (global variable) or the array to which the global variable may belong (global array).

HCFA-1500

Form sent to the proper Medicare carrier requesting that Medicare Part B payment be made for covered services.

HCPCS Procedure Code

Procedure codes that identify services so that appropriate payment can be made. These codes are required for many specific types of outpatient services and a few inpatient services.

ICD-9 Code

Diagnosis code which describes the principle diagnosis (i.e., the condition established after study to be chiefly responsible for causing this hospitalization).

INDEX (%INDEX)

A Kernel utility used to verify routines and other MUMPS code associated with a package. Checking is done according to current ANSI MUMPS standards and RPMS programming standards. This tool can be invoked through an option or from direct mode (>D ^%INDEX).

Init

Initialization of an application package. The initialization step in the installation process builds files from a set of routines (the init routines). Init is a shortened form of initialization.

Insurer File

File consisting of Insurance companies which IHS has authorization to bill for services provided to IHS patients.

Internal Entry Number (IEN)

The number used to identify an entry within a file. Every record has a unique Internal Entry Number.

IRM

Information Resource Management. The IHS personnel responsible for information systems management and security.

Itemized Bill

A bill generated with a detailed description of each item and cost of the item.

Kernel

The set of MUMPS software utilities that function as an intermediary between the host operating system and application packages, such as Laboratory and Pharmacy. The Kernel provides a standard and consistent user and programmer interface between application packages and the underlying MUMPS implementation. These utilities provide the foundation for RPMS.

Medicaid

A federally aided, state operated program that provides medical benefits for certain low-income persons.

Medicare

A national health insurance program for people 65 years of age and older, certain younger disabled people, and people with kidney failure. It is divided into two parts: Hospital Insurance (Part A) and Medical Insurance (Part B).

Medicare Part A Coverage

Insurance that pays for medically necessary inpatient hospital care, skilled nursing facility or psychiatric hospital and for hospice and home health care for eligible patients.

Medicare Part B Coverage

Insurance that pays for medically necessary doctor services and many other medical services and supplies for eligible patients.

Medicare Supplement Policy

A health insurance policy that pays certain costs not covered by Medicare such as coinsurance and deductibles.

Menu

A list of choices for computing activity. A menu is a type of option designed to identify a series of items (other options) for presentation to the user for selection. When displayed, menu-type options are preceded by the word “Select” and followed by the word “option” as in Select Menu Management option: (the menu’s select prompt).

Modifier

Two position codes serving as modifiers to HCPCS procedures.

Namespace

A unique set of 2 to 4 alpha characters that are assigned by the database administrator to a software application.

Non-Beneficiary

Person not eligible to receive services at IHS or tribal facilities due to regulation, policies, and procedures.

Non-Covered Days

Days of care not covered by the primary payer.

Option

An entry in the Option file. As an item on a menu, an option provides an opportunity for users to select it, thereby invoking the associated computing activity. Options may also be scheduled to run in the background, non-interactively, by TaskMan.

Payment Posting

The entering of payment information related to a bill by category, such as payment amount, deductible amount, co-insurance amount, etc. in order to account for the entire amount billed.

Preferred Providers

Physicians, hospitals, and other health care providers who contract to provide health services to persons covered by a particular health plan.

Primary Care Provider

The provider that serves as the initial interface between the member and the medical care system. The PCP is usually a physician, selected by the member upon enrollment, who is trained in one of the primary care specialties who treats and is responsible for coordinating the treatment of members assigned to his/her panel.

Private Insurance

Health insurance other than Medicare or Medicaid. Coverage is usually based on current employment or current employment of a family member.

Procedure Codes

Codes that identify the principal procedure(s) performed during the period covered by a bill.

Revenue Code

Code used for outpatient ancillary services provided.

Routine

A program or sequence of instructions called by a program that may have some general or frequent use. MUMPS routines are groups of program lines that are saved, loaded, and called as a single unit via a specific name.

Segment

A group of elements (also known as data fields) in an HL7 message that have been defined as logically belonging to the same category. Each segment contains a three-character Segment ID, the elements, administrative information (if applicable to that segment type), and designated delimiters between each element.

Table Maintenance

Managing table files associated with the billing system.

UB-92

National Uniform Billing Form used for billing for hospital and hospital clinic services implemented in October 1993.

UCI

User Class Identification, a computing area.

Utility

A callable routine line tag or function; a universal routine usable by anyone.

Variable

A character or group of characters that refers to a value. MUMPS recognizes three types of variables: local, global, and special variables. Local variables exist in a partition of the main memory and delete when the user logs out. A global variable is stored on disk, potentially available to any user. Global variables usually exist as part of global arrays.

Acronym List

Acronym	Term Meaning
IHS	Indian Health Service
RPMS	Resource and Patient Management System
ABM	Third Party Billing
BAR	Accounts Receivable
CPT	Current Procedural Terminology (CPT) is a medical code set that is used to report medical, surgical, and diagnostic procedures and services to entities such as physicians, health insurance companies and accreditation organizations.
