Preface

This manual describes the installation of the Practice Management Application Suite (namespace BPRM) and any additional support software needed.

BPRM is a browser-enabled graphical user interface (GUI) for the Indian Health Service (IHS) Resource and Patient Management System (RPMS) applications. It provides improved access to existing RPMS data and streamlines the input of new patient data. In some aspects of its operation and configuration, this suite is also referred to by its development name, Moonwalk. It should also be noted that prior to V3.0, the previous namespace for the Practice Management Application Suite was BMW. The BMW namespace now refers only to the CACHE.DAT file used by BPRM and other IHS applications.

The BPRM application suite consumes Cache classes, provided by BMW, which maps onto FileMan files. Create, read, update, and delete (CRUD) operations can then be performed over the generated Cache classes (SQL tables) via the ADO.NET provider for InterSystems Ensemble/Cache.
1.0 **Release Notes**

The following describes the changes made in BPRM V3.0 patch 8.

1.1 **Patient Registration**

- (CR #11254) Implement Race/Ethnicity CDC 900+ concepts
- (CR #11288) Include Sexual Orientation/Gender Identity fields
  - Sexual Orientation
  - Gender Identity
  - Preferred Name
  - Pronouns
  - Legal Sex
  - Sex – renamed to Birth Sex
- (CR #11457) User security auditing (BUSA) requirements for CHIT
- (CR #11717) Add effective date for legal sex source document
- (CR #11231) Sunset eCQM BPRM

1.2 **HealthShare**

- (CR #11778) Connection pool limits related to HealthShare for BPRM
- (CR #11779) Upgrade to latest HealthShare ADO.net driver

1.3 **CQM**

The CQM module has been removed from BPRM in this build and will not be part of Practice Management Application Suite (BPRM) any longer. CQM is now a two-part separate application released as eCQM and BQRE.

2.2 Required Resources
This section lists the computer resources required for each deployment strategy.

2.2.1 Standalone Application Server Resources
The following resources are required for a standalone application server:
- Microsoft® Windows® Server 2012 or 2016 x64 bit (or later)
- Microsoft IIS® 8.5 and 10
- Microsoft .NET Framework 4.6 (or later)
- Four processor cores running at 2.0 GHz or faster (for site)
- Eight processor cores running at 2.4 GHz or faster (for area office)
- 4 GB RAM running at 1333 MHz (for site)
- 12 GB RAM running at 1333 MHz (for area office)
- 60 GB minimum free disk space (disk drives should be 10K RPM or faster)
See Appendix C for a listing of specifications for a typical BPRM application server.

2.2.2 BPRM Server Disk Resources
Servers running the BPRM application require a minimum of 5 GB of free disk space.
2.2.3 Workstation Resources

The following resources are recommended for any workstations (user machines) accessing the BPRM application:

- Dual-core processor running at 1.8 GHz or faster
- 4 GB of RAM
- 20 GB free disk space
- Screen resolution of 1024 x 768 or higher
- Windows 7 (highly recommended) or above
- Internet Explorer® 9 (highly recommended) or Internet Explorer 10, 11
- Microsoft Silverlight® 5.0 plugin for Internet Explorer (required)

The Silverlight plugin can be rolled out on an enterprise basis using Group Policies or another enterprise deployment tool, or it can be installed individually on the workstation. Silverlight is available from Microsoft at this location: http://www.microsoft.com/getsilverlight/get-started/install/default.aspx.

2.3 Before You Begin: Installation Issues

Internet connectivity on the application server is necessary to download the required installation items.

2.4 Prerequisites

2.4.1 Ensemble Prerequisites

- BPRM v3.0 patch 8 currently supports only HealthShare 2017.2.x. Be aware the examples in this Installation Manual reflect Ensemble 2017.2. If running a different version, some of the screens may differ slightly from those shown here.

- A BMW-specific CACHE.DAT file (Version 2020.3 or later) must be loaded into the Ensemble server BMW namespace. Acquire this file from the IHS FTP or RPMS website; it is not delivered as part of the installation package. Refer to the latest BMW CACHE.DAT Installation Guide for more information.

2.4.2 BPRM Prerequisites

The following cache.dat file must be installed:

- BMW Version 2020.3

The following KIDS must be installed:

- PIMS v5.3 p1019
- AG v7.1 p15
- AUM v20 p4
- AUT v98.1 p28
- AUT v98.1 p29
- XU v8.0 p1018 or later
- DI v22 p1018 or later
- BJPC v2.0 p10
- AVA v93.2 p25
- AVA v93.2 p26
- AUPN v99.1 p28
- BSDX v3.0
- EHR v1.1 patch 14
### 3.0 Installation Overview

The BPRM v3.0 patch 8 installation requires three files. The `bprm0300.08.xml` data description file and the `bprm0300.08.msi` application installation file are specific to the BPRM suite. These two files are included in the BPRM distribution package.

Additionally, a `CACHE.DAT` file (contained in a zipped file) specific to the Ensemble version is also necessary. This `CACHE.DAT` file is used by BPRM as well as other Certified Health IT 2015 IHS applications and is not included as part of the distribution package. It must be acquired separately from the IHS FTP or RPMS website.

Save the `bprm0300.08.xml` data description file and the zipped file containing the `CACHE.DAT` file to a folder that is accessible to your database server. Similarly, save the `bprm0300.08.msi` file to a folder that is accessible to your application server(s).

Refer to Section 4.0 if an earlier version of BPRM is installed at your site. Follow the instructions in Sections 5.0 through 8.0 to install BPRM for the first time at your site.

#### 3.1 BMW Database Deployment Strategy

To minimize changes to the RPMS database, BPRM adopts a strategy where a separate database is mounted or attached on a current Ensemble/Cache server. This mounted database contains already generated Cache classes against FileMan files.

The classes in the BMW database are generated in a specific package called BMW. The BMW package can be mapped onto the RPMS database, thus enabling the RPMS database to consume the mapped classes. The Cache-generated Classes will reside in the BMW database, yet remain available to the RPMS database, thus achieving the goal of minimizing steps for the BMW database setup when it is scaled onto several sites.
4.0 Installing BPRM Patch Update (Existing Sites)

BPRM patches and updates are released on a periodic basis to address reported issues and to add enhancements. Follow the steps in Sections 4.1 through 4.9 to install an incremental patch or update.

**Note:** If BPRM is being installed over Windows Server 2016 setup, make sure that .Net framework and WCF components, as show in Section 6.3 of this document, have been installed successfully. It may be a good idea to go through Section 6.3 of this document and follow the outlined steps.

4.1 Uninstall the BPRM Application

Follow these steps to uninstall BPRM:

1. Open the Windows **Control Panel** and select the **Programs and Features** applet.

2. Select the BPRM application as shown in Figure 4-1 and click **Uninstall**. Be aware that in some cases, the previous namespace (BMW) may display instead of BPRM.

![Figure 4-1: Uninstalling BPRM](image-url)
4.2 Uninstall the MongoDB Application

If you are upgrading from BPRM v3.0, follow these steps to uninstall the MongoDB services:

3. Open the Windows Control Panel and select the Programs and Features applet.

4. Select the MongoDB application and click Uninstall.

5. Open the Windows Control Panel and select Administrative Tools.

6. Use the Services option and confirm that the MongoDB and CQM_CAT1_EXTRACT services are no longer listed. If so, it may be necessary to manually remove the services.

7. To manually remove the services, open the Command Prompt in Administrator mode and enter the following commands:

   `sc delete MongoDB`  
   `sc delete CQM_CAT1_EXTRACT`

8. Confirm that the deletion completes successfully. A server restart may be required to complete the service deletion.

4.3 Update HTTP Compression

Starting in BPRM v3.0 Patch 2, the BPRM application will no longer use the cached data folder. To facilitate this change for existing installs, complete the following changes on the Application server:

To edit the HTTP compression:

1. Using Windows Explorer, browse to `C:\Windows\System32\inetsrv\config` as shown in Figure 4-2.

   **Note:** This folder is typically hidden; it may be necessary to manually type the folder path in the Windows Explorer address bar.
2. Open the **applicationHost.config** file with a text editor such as Notepad and find or search for the **httpCompression** tag.

   **Note:** The statements following the tag in the file on the system might not match those in this example.

3. Add the following line to the dynamicTypes section:

   ```xml
   <add mimeType="application/json" enabled="true" />
   ```

4. Once added, the **httpCompression** section should look similar to Figure 4-3.

   ```xml
   <httpCompression directory="%SystemDrive%\inetpub\temp\IIS Temporary Compressed Files">
   <scheme name="gzip" dll="%Windir%\system32\inetsrv\gzip.dll"
      dynamicCompressionLevel="5" />
   <dynamicTypes>
   <add mimeType="text/*" enabled="true" />
   <add mimeType="message/*" enabled="true" />
   <add mimeType="application/x-javascript" enabled="true" />
   <add mimeType="application/javascript" enabled="true" />
   <add mimeType="application/json" enabled="true" />
   <add mimeType="*/*" enabled="false" />
   </dynamicTypes>
   <staticTypes>
   <add mimeType="text/*" enabled="true" />
   <add mimeType="message/*" enabled="true" />
   <add mimeType="application/javascript" enabled="true" />
   <add mimeType="*/*" enabled="false" />
   </staticTypes>
   </httpCompression>
   ```

   **Figure 4-3: Typical applicationHost.config file after changes**
5. When finished editing the applicationHost.config file, save it and exit from the text editor.

4.4 Update Application Pool Identity

To add the Application Pool:

1. Go to the **IIS Manager** and browse to **Application Pools** in the tree structure below your IIS node as shown in Figure 4-4.

![Figure 4-4: IIS Manager browsed to Application Pools](image)

2. Right-click the **Moonwalk** application pool and select **Advanced Settings**. A dialog similar Figure 4-5 to displays.

![Figure 4-5: Application Pool Advanced Settings](image)
3. Change the **Identity** value to **LocalSystem**.

4. Click **OK** to save the changes and close the dialog.

### 4.5 Install the BPRM Application

To deploy the BPRM application:

1. Log onto the application server and browse to the location where the **BPRM Application Installer** file (*bprm0300.08.msi*) is stored.

2. Double-click the *bprm0300.08.msi* file to run the BPRM application installer.

   **Note:** If an error message displays indicating that you do not have sufficient privileges to run the installer, refer to Appendix A for instructions on running the installer from the Administrator command prompt.

3. Once the installer is started, the **BPRM Setup Wizard** (Figure 4-6) displays.

![BPRM Setup Wizard](image)

Figure 4-6: **BPRM Setup Wizard** dialog

4. Click **Next**. The **Select Installation Address** dialog displays.

5. Select **Moonwalk** from the **Site** list.

6. Type the directory name in the **Virtual directory** field, if necessary.
7. Select **Moonwalk** from the **Application Pool** list. Figure 4-7 shows the results.

![Select Installation Location dialog after selection](image)

Figure 4-7: **Select Installation Location** dialog after selection

8. Click **Next**. The **Installing BPRM** dialog (Figure 4-8) displays, showing the installation progress.

![Installing BPRM dialog](image)

Figure 4-8: **Installing BPRM** dialog
9. After a few moments of processing, the **Database Configuration** dialog (Figure 4-9) displays.

![Database Configuration dialog](image)

**Figure 4-9: Database Configuration dialog**

10. In the **Database Configuration** dialog, click **Load Existing Configuration**. The **Configuration File Selection** dialog (Figure 4-10) displays.

![Configuration File Selection dialog](image)

**Figure 4-10: Configuration File Selection dialog**

11. Select **Facilities**, then click **Open**. The **Database Configuration** dialog displays again, with the existing configuration listed, similar to that shown in Figure 4-11.
12. There are two additional columns: **Min Pool** and **Max Pool**. These are introduced in BPRM v3p8 and known as **Connection Pool Settings**. Connection Pool Settings relate to connection settings for the BPRM application when requesting connections from HealthShare database. This setting has been introduced since, with HealthShare, the number of licensed connections have decreased from 1,500 (in ensemble) to 250–500 (in HealthShare) and that has resulted in exhaustion of licenses. Sites can customize the number of minimum connections and maximum connections the BPRM application can request from the HealthShare application. It is defaulted to 20–100 but sites can modify according to the site’s HealthShare license and BPRM usage.

a. The minimum number indicates the minimum connections the BPRM application shall create/request from the HealthShare DB, when the application is accessed for the first time. Minimum connections persist as long as the application is live.

b. Maximum number indicates the maximum connections BPRM shall create/request from HealthShareDB at any given time (usually at the busiest time). Connections shall be destroyed, when not in use, until it reaches the minimum threshold.

13. After you have specified all of the required information in the **BPRM Release Manager** dialog, click **Continue** to complete the installation.

14. A **Moonwalk Setup Status Page** (Figure 4-12) will display to perform a setup check. The checks listed should display as complete. This page can only display results while the Moonwalk website and application pool are started.
15. When the installation is complete, click **Next**. The **Installation Complete** dialog (Figure 4-13) displays.

16. Click **Close** to exit the dialog.

### 4.6 Importing a New BMW CACHE.DAT File

Follow the steps outlined in Section 5.0 of the *BMW CACHE.DAT Installation Guide* to import a new BMW CACHE.DAT file.
4.7 Importing a New BPRM XML File

A BPRM patch or update is contained within a single XML file. Follow the steps in Sections 4.7.1 through 4.7.2 to import a new BPRM XML file.

4.7.1 Disable Read Only

In order to import the bprm0300.08.xml file, set the BMW database to allow write access. If the database is set to Read Only:

1. Browse to the Local Databases window of the Ensemble Management Portal following this path:
   
   Home > System Administration > Configuration > System Configuration > Local Databases.

2. Click on the BMW database to open the edit page.

3. In the window displayed, set the Read Only? field to No.

Once the patch is installed, re-enable Read Only mode by repeating these steps and setting the Read Only? field to Yes.

4.7.2 Import the BPRM XML File

To import the bprm0300.08.xml file:

1. From the Ensemble/Cache System Management Portal Home window, click System Explorer, and then click Classes.

2. In the Classes window (Figure 4-14), select the BMW namespace in the LookIn: section on the left side of the window.
3. **Click Import.** to display the **Import Classes** dialog shown in Figure 4-15.

![Figure 4-14: Classes window](image)

![Figure 4-15: Import Classes window](image)

4. **Click Browse** and navigate to the `bprm0300.08.xml` file in the folder it is saved as described in Section 3.0. Select the `bprm0300.08.xml` file and click **Next.**

5. **Next, a listing (Figure 4-16) will display, showing the contents of the XML file.**
6. Click **Import**. After a few moments of processing, a listing of the imported classes will display. Figure 4-17 shows an example of a typical listing.
Figure 4-17: **Import Classes** window - Import listing

7. Scroll to the bottom of the listing to confirm the **Load finished successfully** message displays (Figure 4-18).

The importation of the **BPRM XML** file is now complete.
4.8 Purge the Previous SQL Queries

To purge any previous SQL queries:

1. From the HealthShare System Management Portal Home window, click System Explorer > SQL (you may need to click twice on SQL).

2. Switch to the RPMS namespace. In the example shown in Figure 4-19, PRECERT is selected. Your site’s RPMS database/namespace may have a different name.

3. Select Actions > Purge Cached Queries > Purge ALL queries for this namespace as shown in Figure 4-20.
4. Click **OK** on the confirmation message “to delete ALL cached queries.”

**4.9 Start the BPRM Website on the Application Server**

If previously stopped, re-start the BPRM (Moonwalk) website.

The installation of the BPRM patch or update is now complete.

**Note:** Please review the additional steps for disabling the IIS Manager Logging feature in Appendix D.
5.0 Installation Instructions: First-Time Install

BPRM contains components that run on both the RPMS server and the client personal computer. As a result, the installation instructions are separated into these actions:

- Application Server Installation (Section 6.0)
- Database Server Installation (Section 7.0)
- Application Installation (Section 8.0)

The application operates in a web-based environment; there is no separate installation necessary on workstations other than the items listed in Section 2.2.3.

5.1 Acquire the SSL Certificate

BPRM utilizes the Secure Sockets Layer (SSL) protocol to ensure secure communications between its components. If your site is not on a secure domain, you must acquire an SSL certificate. If your site is on a secure domain, an SSL certificate is not necessary and you can skip all of this section (5.1), and Sections 6.8 and 6.9.

**Note:** Since the SSL certificate acquisition may take up to 24 hours, it is recommended that you acquire the SSL certificate before beginning the BPRM installation.

The process for acquiring this certificate for sites on the IHS domain is different than that used by sites that are not on the IHS domain.

5.1.1 SSL Certificate Acquisition – IHS Domain

If your site is on the IHS domain, use the following steps to acquire your SSL certificate:

1. Click **Start**, **Administrative Tools**, and **Internet Information Services (IIS) Manager** (Figure 5-1).
2. Click the server name. The **IIS Manager** dialog (Figure 5-2) displays.

![Figure 5-1: Windows Start menu, Administrative Tools option](image)

**Figure 5-1:** Windows *Start* menu, *Administrative Tools* option

![Figure 5-2: Internet Information Services (IIS) Manager](image)

**Figure 5-2:** *Internet Information Services (IIS) Manager*
3. In the center panel, double-click **Server Certificates** in the **Security** section (near the bottom of the panel).

![Internet Information Services (IIS) manager – Server Certificates](image)

4. In the **Actions** panel (on the right), click **Create Certificate Request**. The **Request Certificate Wizard** (Figure 5-4) displays.

5. In the **Distinguished Name Properties** dialog, enter the information as follows:
   - **Common Name**: The name through which the certificate will be accessed (usually the fully-qualified domain name of the machine).
   - **Organization**: The legally registered name of your organization or company.
   - **Organizational unit**: The name of your department within the organization (e.g., IHS).
   - **City/locality**: The city in which your organization is located.
   - **State/province**: The state in which your organization is located.
   - **Country/region**: The two-character country code.
6. Click **Next**. The **Cryptographic Service Provider Properties** dialog (Figure 5-5) displays.
7. Leave both settings at their defaults:
   
   - **Cryptographic service provider**: Microsoft RSA SChannel Cryptographic Provider.
   
   - **Bit length**: 2048.

8. Click **Next**. The **File Name** dialog (Figure 5-6) displays.
9. Type a path and file name for the certificate request file. Make note of the chosen filename and the save location. You will need to open this file as a text file and copy the entire body of it (including the Begin Certificate Request and End Certificate Request tags) into the online order process when prompted.

10. Click **Finish** to save the SSL certificate request file.

11. E-mail the file to itsupport@ihs.gov. Request the SSL Certificate in CER format for the BPRM Application. A certificate will be issued within 24 hours and e-mailed to the originator of the request. Once the certificate is received, proceed with the BPRM installation as described in Sections 6.0 through 8.0.

### 5.1.2 SSL Certificate Acquisition – Non-IHS Domain

If the site is not on the IHS domain, the steps for acquiring an SSL certificate will vary, depending on the certificate provider. Several vendors (e.g., GoDaddy, Thawte, and Verisign) provide SSL certificates, and the process for acquiring the certificate is different for each.

Follow the steps provided by the SSL certificate vendor to acquire an SSL certificate, and proceed to the BPRM installation instructions in Sections 6.0 through 8.0.
6.0  BPRM Application Server Installation and Configuration

6.1  Microsoft .NET Framework Verification

Windows Server 2016 includes the .NET Framework 4.6.2 as an OS component, and it is installed by default. Please skip .Net Framework installation step if it is a Windows Server 2016 environment.

As mentioned in Section 2.2.1, Microsoft .NET Framework 4.6 (or later) is required on the BPRM application server. To determine if it is already installed:

1. From the Windows **Start** menu, select **Control Panel**.

2. Click **Programs and Features**. A listing similar to that shown in Figure 6-1 displays.

![Programs and Features listing](image)

3. Review the listing, looking for any **Microsoft .NET Framework 4.x** entries. If none are found, install the .NET Framework 4.5 by following the instructions in Section 6.2. If Microsoft .NET Framework 4.5 is listed, skip to Section 6.3.

**Note:** There can be more than one version of the .NET Framework on the server at the same time.

6.2  Microsoft .NET Framework 4.5 Installation

**Note:** Please skip this step if on a Windows Server 2016 environment, since .Net framework 4.6.x is shipped with Windows Server 2016 operating system.

To install the .NET Framework:

2. Double-click the downloaded file to run the .Net Framework 4.5 setup. The License Terms dialog (Figure 6-2) displays:

![Figure 6-2: .NET Framework License Terms dialog](image)

3. Select the I have read and accept the license terms check box to accept the license agreement.

4. Click Install. Respond to any prompts presented as the installation proceeds. When completed, the Installation Is Complete dialog (Figure 6-3) displays.

![Figure 6-3: Installation Is Complete dialog](image)
5. Click **Finish** to complete the installation. If necessary, restart the server.

6. As a final step, run the Windows Updates utility to check for and install any .NET Framework updates that may be available.

   It is very important to check for and install any .NET Framework updates. These updates can be critical to the stability and security of BPRM operation.

### 6.3 Internet Information Services 10 Installation (Windows Server 2016 Operating System)

To install the Microsoft IIS:

1. From the Windows **Start** menu, select **Server Manager** (Figure 6-4).
2. The **Server Manager** dialog displays. Click **Manage > Add Roles and Features** (Figure 6-5).

3. Review the **Before You Begin** dialog, then click **Next**.
4. The **Add Roles and Features Wizard** dialog displays. Select the **Role-based or feature-based installation** option button (Figure 6-6). Click **Next**.

![Figure 6-6: Add Roles and Features Wizard dialog](image)

5. Select **Web Server (IIS)** on the **Server Selection** window. The **Select server roles** window (Figure 6-7) displays.

![Figure 6-7: Select server roles](image)
6. Expand the Web Server (IIS) role and make following selections. Figure 6-8 displays a portion of the selection.

![Add Roles and Features Wizard](image)

**Figure 6-8: Select Web Server components**

Enable the following **Web Server** role services:

- **Common HTTP Features:**
  - Static Content
  - Default Document
  - Directory Browsing
  - HTTP Errors
  - HTTP Redirection

- **Application Development:**
  - ASP.NET (latest version)
  - .NET Extensibility (latest version)
  - ISAPI Extensions
  - ISAPI Filters

- **Health and Diagnostics (optional):**
  - HTTP Logging
  - Request Monitor

- **Security:**
  - Request Filtering
7. Click **Next** to go to the **Features** tab.

8. In the Features area, make following selections:

   - **.NET Framework 3.5 Features**
     - HTTP Activation
     - Non-HTTP Activation

   - **.NET Framework 4.6 Features**
     - WCF Services
       - HTTP Activation
       - Message Queuing (MSMQ) Activation
       - Named Pipe Activation
       - TCP Activation
       - TCP Port Sharing

9. Click **Next** to display the **Confirmation** dialog. Click **Install** (Figure 6-9).
10. Click **Close** after the installation is complete.

**Note:** Please review the additional steps for disabling the IIS Manager Logging feature in Appendix D.

### 6.4 Windows Communication Foundation Activation (Skip for Windows 2016)

To activate the Windows Communication Foundation (WCF):

1. From the Windows **Start** menu, select **Administrative Tools**.
2. Select **Server Manager** to display the **Server Manager** dialog.
3. Click **Features** in the left pane. The **Features** pane (Figure 6-10) displays.
4. Select **Add Features**. The **Add Features Wizard** (Figure 6-11) displays.

![Server Manager Features applet selected](image)

**Figure 6-10: Server Manager Features applet selected**

![Add Features Wizard – Select Features dialog](image)

**Figure 6-11: Add Features Wizard – Select Features dialog**
5. Select the **.NET Framework 4.x Features**, including the WFC Activation options.

**Note:** The example in Figure 6-11 shows .NET Framework 3.0. You may see a different .NET Framework version on your server.

6. Click **Next**. The **Confirm Installation Selections** dialog (Figure 6-12) displays.

![Add Features Wizard - Confirm Installation Selections](image)

Figure 6-12: **Add Features Wizard - Confirm Installation Selections** dialog

7. Click **Install** to complete the process.

8. Click **Next** to view the **Installation Results** (Figure 6-13).
9. Click Close to complete the WCF installation.

6.5 Adding MIME Types

To add MIME types:

1. From the Windows Start menu, select Administrative Tools.
Figure 6-14: Opening **Internet Information Services (IIS) Manager**

Figure 6-15: Windows Start menu
2. Select **Internet Information Services (IIS) Manager** to display the IIS Management Console (Figure 6-17).

![Image of Administrative Tools](image1)

**Figure 6-16: Administrative Tools**

3. Select the application server in the left pane.

4. Double-click **MIME Types** to display the **MIME Types** dialog (Figure 6-18).

![Image of IIS Management Console](image2)

**Figure 6-17: IIS Management Console**
5. Click **Add** in the **Actions** pane. The **Add MIME Type** dialog (Figure 6-19) displays:

![Figure 6-19: Blank Add MIME Type dialog](image)

**Figure 6-19: Blank Add MIME Type dialog**

![Figure 6-20: Add MIME Type .aspx extension](image)

**Figure 6-20: Add MIME Type .aspx extension**
6. Type `.aspx` in the **File name extension** field.

7. Type `text/html` in the **MIME type** field.

8. Click **OK**.

9. In the **MIME Types** dialog (Figure 6-18), click **Add** in the **Actions** pane on the right of the screen.

10. Type `.svc` in the **File name extension** field.

11. Type `application/soap+msbin1` in the **MIME type** field.

12. Click **OK**.

13. Click the back arrow in the upper left corner of the IIS Management Console (Figure 6-18) to return to the **IIS Manager Start** window.

### 6.6 HTTP Compression Configuration

To configure HTTP compression:

1. Using **Windows Explorer**, browse to `C:\Windows\System32\inetsrv\config` as shown in Figure 6-22.

**Note:** This folder is typically hidden; you may need to manually type the folder path in the Windows Explorer address bar.
2. Open the `applicationHost.config` file with a text editor such as Notepad and find the `httpCompression` tag. Figure 6-23 shows a typical applicationHost.config file after scrolling down to the `httpCompression` tag.

**Note:** The statements following the tag in the file on the system might not match those in this example.

```xml
<httpCompression directory="%SystemDrive%/inetpub/temp\IIS Temporary Compressed Files">
  <scheme name="gzip" dll="%Windir%\system32\inetsrv\gzip.dll" />
  <dynamicTypes>
    <add mimeType="text/*" enabled="true" />
    <add mimeType="message/*" enabled="true" />
    <add mimeType="application/x-javascript" enabled="true" />
    <add mimeType="*/*" enabled="false" />
  </dynamicTypes>
  <staticTypes>
    <add mimeType="text/*" enabled="true" />
    <add mimeType="message/*" enabled="true" />
    <add mimeType="application/javascript" enabled="true" />
    <add mimeType="*/*" enabled="false" />
  </staticTypes>
</httpCompression>
```

Figure 6-23: Section of a typical applicationHost.config file

3. If not already present in your `applicationHost.config` file, ensure the dynamic compression level and dynamic type statements are added to the file as shown in Figure 6-24.
<httpCompression directory="%SystemDrive%\inetpub\temp\IIS Temporary Compressed Files">
  <scheme name="gzip" dll="%Windir%\system32\inetsrv\gzip.dll">
    dynamicCompressionLevel="5" />
  <dynamicTypes>
    <add mimeType="text/*" enabled="true" />
    <add mimeType="message/*" enabled="true" />
    <add mimeType="application/x-javascript" enabled="true" />
    <add mimeType="application/javascript" enabled="true" />
    <add mimeType="application/json" enabled="true" />
    <add mimeType="*/*" enabled="false" />
  </dynamicTypes>
  <staticTypes>
    <add mimeType="text/*" enabled="true" />
    <add mimeType="message/*" enabled="true" />
    <add mimeType="application/javascript" enabled="true" />
    <add mimeType="*/*" enabled="false" />
  </staticTypes>
</httpCompression>

Figure 6-24: Typical applicationHost.config file after changes

4. When finished editing the applicationHost.config file, save it and exit from the text editor.

6.7 Moonwalk Web Site Setup

6.7.1 Add the Application Pool

To add the Application Pool:

1. Return to the IIS Manager opened in Section 6.5 and browse to Application Pools in the tree structure below your IIS node as shown in Figure 6-25.

![IIS Manager](image)

Figure 6-25: IIS Manager browsed to Application Pools

2. Right-click Application Pools and select Add Application Pool. The Add Application Pool dialog (Figure 6-26) displays.
3. In the **Name** field, type the name of the application pool (**Moonwalk**).

4. In the **.NET Framework version:** field, select version 4.x of the .NET Framework.

5. Click **OK**.

6. Right-click the newly-created application pool in **IIS Manager** and click **Advanced Settings**. A dialog similar to Figure 6-27 displays:
7. Change the **Idle Time-out** value to **120** minutes.

8. Change the **Identity** value to **LocalSystem**.

9. Click **OK** to save the changes and close the dialog.

### 6.7.2 Create a Moonwalk Folder

To aid in setting up the Moonwalk website, create a `C:\inetpub\Moonwalk` folder:

2. Click **Organize**, then select **New Folder**. (Alternatively, click **New Folder** in the Windows Explorer toolbar if it is present.)

3. Type **Moonwalk** and press **Enter** to create the `C:\inetpub\Moonwalk` folder.

### 6.7.3 Add the New Site

To add the new website:

1. Right-click **Sites** in the **Connections** pane of the IIS Manager and select **Add Web Site**. The **Add Web Site** dialog (Figure 6-28) displays.

![Add Web Site dialog](image)

**Figure 6-28: Add Web Site dialog**
2. In the Site name field, type **Moonwalk**.

3. Click **Select** and select the Moonwalk application pool created in the previous steps.

4. In the **Physical Path** field, browse to the C:\inetpub\Moonwalk folder created in Section 6.7.2. Be aware that the location will be different if the folder was created on a different drive.

5. Set the port number in the **Binding** section to the range of 80 through 83 unless you have a specific reason not to do so. If you use a port other than the default Port 80, ensure that port is open on your firewall.

6. Click **OK** to save the changes and close the Add Web Site dialog.

### 6.8 Install the SSL Certificate

To install the SSL server certificate acquired in Section 5.1:

1. From the Windows **Start** menu, select **Administrative Tools**.

2. Select **Internet Information Services (IIS) Manager**.

![Internet Information Services (IIS) Manager](image)

*Figure 6-29: Internet Information Services (IIS) Manager*

3. Click the server name in the left panel.
4. Double-click **Server Certificates** in the **Security** section (near the bottom of the panel).

5. In the **Actions** panel (on the right), click **Complete Certificate Request**. The **Complete Certificate Request** dialog displays.

   **Note:** The Complete Certificate Request must be complete on the same system where the Certificate Signing Request was generated (Section 5.1.1, Step 11) to ensure the private key is correctly associated with the new certificate.

6. Click the ellipses button (…) to browse to the location where the server certificate file acquired in Section 5.1 is saved.

7. In the **Friendly name** field, type the friendly name for the certificate. This name is intended for use for management of certificate stores on the server.

8. In the **Select a certificate store for the certificate** field, verify **Personal Store** is selected.

9. Click **OK** to complete the procedure.
6.9 Configure the SSL Certificate

**Note:** If you configure the SSL certificate after installing the BPRM application, you must uninstall BPRM before configuring the SSL certificate. See Section 4.1 for information about uninstalling BPRM.

To configure the SSL certificate:

1. In the **IIS Manager** window, select the name of the server where the certificate was installed.

2. Under **Sites**, select the site to be secured with the SSL certificate.

3. In the **Actions** pane, click **Bindings**.

4. Click **Add**.

5. In **Add Site Binding**:
   a. For **Type**, select **https**.
   b. For **IP address**, select **All Unassigned**, or the IP address of the site.
   c. For **Port**, specify a port number ranging from **440** through **443**.

   **Note:** When installing SSL with HTTPS (port 440 through 443), first remove any previous site bindings for HTTP (port 80 through 83). The **Site Bindings** dialog shown in Figure 6-31 will indicate whether there any HTTP site bindings and allow their removal.

   d. Select the **SSL certificate** just installed. Click **OK**.
6. Click Close.

7. Close **Internet Information Services (IIS) Manager**.

The SSL Certificate is now configured. Visit the website via an HTTPS connection, using the domain name, not the IP address, to verify the installation.
7.0 BPRM Database Server Installation and Configuration

This section outlines the steps essential for setting up and configuring an IHS RPMS database server for the BPRM application to be executed against the RPMS database. It also provides steps to set up such an environment.

7.1 Assumptions

This section assumes the following:

• Ensemble/Cache server (running one of the supported versions as described in Section 2.4.1) has already been set up.

• An RPMS database is already set up on the Ensemble/Cache server.

• The person performing the installation and configuration has the appropriate rights to mount databases, create a namespace, and edit namespace settings for the RPMS database.

• The BMW CACHE.DAT file provided by OIT SQA as described in the BMW CACHE.DAT Installation Guide document is installed.

7.2 Importing a New BPRM XML File

A separate XML file is included with the release; follow the steps in Sections 7.2.1 through 7.2.2 to import a new BPRM XML file.

7.2.1 Disable Read Only

In order to import the bprm0300.08.xml file, you must set the BMW database to allow write access. If the database is set to Read Only:

1. Browse to the Local Databases window of the Ensemble Management Portal following this path:

   Home > System Administration > Configuration > System Configuration > Local Databases.

2. Click BMW to open the edit database settings/configuration page.

3. In the window displayed, set the Read Only? field to No.

Once the patch is installed, you can re-enable Read Only mode by repeating these steps and setting the Read Only? field to Yes.
7.2.2 Import the BPRM XML File

To import the bprm0300.08.xml file:

1. From the Ensemble/Cache System Management Portal Home window, click System Explorer, then Classes. The Classes dialog (Figure 7-1) displays.

![Classes dialog](image)

Figure 7-1: Classes dialog

2. Select the BMW namespace in the LookIn: pane on the left side of the dialog.

3. Click Import. The Import Classes dialog (Figure 7-2) displays.
4. Click **Browse** and navigate to the **bprm0300.08.xml** file in the folder where it is saved as described in Section 3.0.

5. Select the **bprm0300.08.xml** file and click **Next**.

6. A listing (Figure 7-3) displays, showing the contents of the XML file.

Figure 7-3: **Import Classes** window – content listing
7. Click **Import**. After a few moments of processing, a listing of the imported classes (Figure 7-4) displays.

![Import Classes window - Import listing](image1)

**Figure 7-4: Import Classes window - Import listing**

8. Scroll to the bottom of the listing to confirm the **Load finished successfully** message displays (Figure 7-5).

![Import Classes window – Load finished successfully](image2)

**Figure 7-5: Import Classes window – Load finished successfully**

At this point, the BMW database configuration is complete.
7.3 Cache User Creation

BPRM performs CRUD operations over the RPMS DB using the BMW tables that were mapped over the RPMS database.

BPRM requires a Cache user privileged to execute CRUD on the RPMS database. Table 7-1 shows the privileges needed:

Table 7-1: User permissions needed

<table>
<thead>
<tr>
<th>Item</th>
<th>Permissions Needed</th>
</tr>
</thead>
<tbody>
<tr>
<td>SQL Tables</td>
<td>Update/Read/Delete privilege on all tables of the BMW package in the RPMS database</td>
</tr>
<tr>
<td>SQL Views</td>
<td>Read permission all views of the BMW package in the RPMS database</td>
</tr>
<tr>
<td>SQL Procedures</td>
<td>Execute permission on all procedures of the BMW package in the RPMS database</td>
</tr>
</tbody>
</table>

7.3.1 Create the Moonwalk User

To create a new Moonwalk user:

1. Navigate to the Users window of the Ensemble System Management Portal following this path:

   Home > System Administration > Security > Users.

2. Click Create New User to display the Edit User window (Figure 7-6).

   ![Figure 7-6: Edit User window](image)
3. Type **MOONWALK_USER** in the **Name** field.

4. Type a password that complies with your site-specific password rules in the **Password** and **Password Confirmation** fields.

5. Click **Save** to save the new user.

6. Click **Close** to exit the **Edit User** window.

### 7.3.2 Assign User Roles

To assign user roles for the required tables:

1. Navigate to the **Users** window (Figure 7-7) in the **Ensemble System Management Portal** following this path:
   
   **Home > System Administration > Security > Users.**

2. Click **Moonwalk_user** as shown in Figure 7-7.

![Figure 7-7: Create New User window](image)

3. Click the **Roles** tab.

4. Select **%ALL** from the **Available** column and move it to the **Selected** column by clicking the right arrow

5. Click the **Roles** tab.

6. Select **%ALL** from the **Available** column and move it to the **Selected** column by clicking the right arrow.
7. Click **Assign** to assign the `%ALL` role to the MOONWALK_USER account. When done, the **Edit User** window will look similar to that shown in Figure 7-8.

![Edit User Window](image)

Figure 7-8: **Roles** tab in **Edit User** window – after changes

### 7.3.3 Verify XML Import and Installation

To verify the XML file has been imported and is readily available:

1. From the HealthShare System Management Portal Home window, click **System Explorer > SQL** (you may need to click twice on **SQL**).

2. Switch to the RPMS namespace. In the example shown in Figure 7-9, PRECERT is selected. Your site’s RPMS database/namespace will likely have a different name.
3. Open the **Schema** menu and select **BMW_BS_F_SP** as shown in Figure 7-10.

![Namespace Chooser window](image)

**Figure 7-9: Namespace Chooser window**

![Expand Schema menu](image)

**Figure 7-10: Expand the Schema menu**
4. Expand **Procedures** as shown in Figure 7-11.

![Figure 7-11: Expand Procedures](image)

5. Scroll down to locate and select **BMW_BSF_SP.Core_AuthenticateUserQ**. Click **Run Procedure** as shown in Figure 7-12.

![Figure 7-12: Run Procedure option](image)

6. Click **Run** on the row containing the name **Core_AuthenticateUserQ**.

7. If the HealthShare version is compatible with the newly installed BMW Cache classes, the **Run Query** window (Figure 7-13) displays.
8. If an error message displays, the HealthShare version running is not compatible with the newly installed BMW Cache classes.
8.0 Application Deployment to the Web Server

With the application and database server installations complete, this section describes the steps for installing the BPRM application itself.

**Note:** If installing an update or patch to an existing BPRM installation, first uninstall the previous version before continuing. See Section 4.0 for instructions.

8.1 Deploy the BPRM Application

To deploy the BPRM application:

1. Log onto the application server and browse to the location where the BPRM Application Installer file (*bprm0300.08.msi*) is stored.

2. Double-click the *bprm0300.08.msi* file to run the BPRM application installer.

   **Note:** If an error message displays indicating that you do not have sufficient privileges to run the installer, refer to Appendix A for instructions on running the installer from the Administrator command prompt.

3. Once the installer is started, the **BPRM setup wizard** (Figure 8-1) displays.

   ![BPRM setup wizard dialog](image)

   Figure 8-1: **BPRM setup wizard** dialog

4. Click **Next**. The **Select Installation Address** dialog displays.

5. Select **Moonwalk** from the **Site** list.
6. Type the directory name in the **Virtual directory** field, if necessary.

7. Select **Moonwalk** from the **Application Pool** list. Figure 8-2 shows the results:

![Select Installation Location dialog](image)

Figure 8-2: **Select Installation Location** dialog after selection

8. Click **Next**. The **Confirm Installation** (Figure 8-3) dialog displays.

![Confirm Installation dialog](image)

Figure 8-3: **Confirm Installation** dialog

9. Click **Next**. The **Installing BPRM** dialog (Figure 8-4) displays and the installation progress is shown.
10. After a few moments of processing, the **Database Configuration** dialog (Figure 8-5) displays.

![Database Configuration dialog](image)

**Figure 8-5: Database Configuration dialog**

11. The BPRM suite relies on specific information about each RPMS database to which it is connected. Click **Add** in the **Database Configuration** dialog to display the **Configuration** dialog (Figure 8-6) and add this information for each database associated with this installation.

![Configuration dialog](image)
The **Database Configuration** dialog contains the following fields:

- **Database IP**: Use this field to enter the IP address of your RPMS database. Note that this is the internal IP address, not an external address.

- **Namespace**: Use this field to enter the namespace of your RPMS database.

- **DB User Name**: This field is automatically populated with the MOONWALK_USER user name.

- **Password**: Use this field to enter the password you set for the MOONWALK_USER account in Section 7.3.1.

- **Port**: Use this field to enter the Cache Superserver port used by your RPMS database. By default, this is port 1972, although it will be different on your system if you have changed this Cache setting.

  You can check your Superserver port number from within the Ensemble Management Portal using this path:

  **Home > Configuration > Memory and Startup**

  The Superserver port number displays at the bottom of the page.

- **Short Name**: This field is automatically populated with your institution’s short name if it exists in your INSTITUTION file. If it does not exist, type a short name of your choice by which you can identify this institution in the future.
- **Institutions**: Use this list box to choose the institutions associated with your RPMS database. When the Default check box is enabled, this list is limited to only the institutions set as your default per your INSTITUTION file. When the check box is cleared, the list will show all available institutions.

- **Institutions**: Use this list box to choose the institutions associated with your RPMS database. When the Default check box is enabled, this list is limited to only the institutions set as your default per your INSTITUTION file. When the check box is cleared, the list will show all available institutions.

- **Connection Pool Settings**: This section relates to connection settings for BPRM application when requesting connections from the HealthShare Database. This setting has been introduced since, with HealthShare, the number of licensed connections have decreased from 1,500 (in ensemble) to 250–500 (in HealthShare) and that has resulted in exhaustion of licenses. Sites can customize the number of minimum connections and maximum connections BPRM application can request from the HealthShare application. It is defaulted to 20–100, but sites can modify according to the site’s HealthShare license and BPRM usage.
  - **Minimum**: This number indicates the minimum connections the BPRM application shall create/request from HealthShare DB, when the application is accessed for the first time. Minimum connections persist as long as the application is live.
  - **Maximum**: This number indicates the maximum connections BPRM shall create/request from HealthShareDB at any given time (usually at the busiest time). Connections shall be destroyed, when not in use, until it reaches the minimum threshold.

12. When the Configuration dialog displays, enter the Database IP, NamespaceDB User Name, Password, and Port, then click Verify Connection. Once the Institutions list is loaded, select your institution from the list and provide a Short Name (if not already present).

13. Once the fields are populated, click Save to add the information to the BPRM database configuration file. If more than one database is associated with this installation of BPRM, re-populate the form fields with the appropriate information and click Save again. Repeat this process for each database.

14. When done, click Continue to continue the application installation.

15. A Moonwalk Setup Status Page (Figure 8-7) will display to perform a setup check. The checks listed should display as complete.
16. When the installation is complete, click **Next**. The **Installation Complete** dialog Figure 8-8 displays.

![Installation Complete](image)

**Figure 8-8: Installation Complete** dialog

17. Click **Close** to exit the dialog.

### 8.2 Adding a Database after the Installation

In some cases, and at some sites, it may be necessary or desirable to associate one or more additional databases to the BPRM application suite. To add a database after BPRM has been installed:

1. Log onto the application server where BPRM resides.
2. Browse to the location where the BPRM Application Installer file (bprm0300.08.msi) is stored.

3. Double-click the bprm0300.08.msi file to run the BPRM application installer. The BPRM setup wizard (Figure 8-9) displays in repair mode.

![BPRM Setup Wizard dialog – repair mode](image)

Figure 8-9: BPRM Setup Wizard dialog – repair mode

4. Select Repair, and then click Finish. The Installing BPRM dialog (Figure 8-10) displays.
5. Click **Next** once the processing is complete. The **Database Configuration** dialog (Figure 8-11) displays.

6. In the **Database Configuration** dialog, click **Load Existing Configuration**. The **Configuration File Selection** dialog (Figure 8-12) displays.
Figure 8-12: **Configuration File Selection** dialog

7. Select **Facilities** and click **Open**. The **Database Configuration** dialog displays again, with the existing configuration listed, similar to that shown in Figure 8-13.

Figure 8-13: **Database Configuration** dialog with existing configurations listed

8. Click **Add** in the **Database Configuration** dialog to display the **Configuration** dialog.

9. When the **Configuration** dialog displays, enter the **Database IP**, **NamespaceDB User Name**, **Password**, and **Port**, then click **Verify Connection**. Once the **Institutions** list is loaded, select your institution from the list and provide a **Short Name** (if not already present).
10. **Connection Pool Settings** relates to connection settings for the BPRM application when requesting connections from HealthShare Database. This setting has been introduced since, with HealthShare, the number of licensed connections has decreased from 1,500 (in Ensemble) to 250–500 (in HealthShare), and that has resulted in exhaustion of licenses. Sites can customize the number of minimum and maximum connections the BPRM application can request from the HealthShare application. It is defaulted to 20–100 but sites can modify according to the site’s HealthShare license and BPRM usage.

   a. Minimum number indicates the minimum connections BPRM application shall create/request from HealthShare DB, when the application is accessed for the first time. Minimum connections persist as long as the application is live.

   b. Maximum number indicates the maximum connections BPRM shall create/request from HealthShareDB at any given time (usually at the busiest time). Connections shall be destroyed, when not in use, until it reaches the minimum threshold.

11. Once the fields are populated, click **Save** to add the information to the BPRM database configuration file. Repeat this process for each database.

12. When done, click **Continue** to continue the application installation.

13. When the installation is complete, the **Installation Complete** dialog Figure 8-14 displays.

![Figure 8-14: Installation Complete dialog](image)

14. Click **Close** to exit the dialog.
8.3 Menu and Security Keys

There are no package-specific security keys associated with BPRM. The BPRM package operates on existing RPMS security keys.

BPRM security is built upon the RPMS Menus and Security keys. Table 8-1 defines the relationship between BPRM Roles and the RPMS Menu and Security keys.

<table>
<thead>
<tr>

<td>AGPAT – or – AGVIEWONLY</td>
<td>AGZPHROPT</td>
</tr>
<tr>
<td>Registration Clerk</td>
<td>AGPAT – or – AGMENU</td>
<td>AGZMENU</td>
</tr>
</tbody>
</table>

Note: If a user has AKMOCORE or AKMOEVE as their primary menu option, either of these menu options will override any of the Secondary Menu options shown in Table 8-1. They will, however, need the appropriate Security Keys as shown in the table.
<table>
<thead>
<tr>
<th>Role</th>
<th>Secondary Menu Option</th>
<th>Security Keys</th>
</tr>
</thead>
<tbody>
<tr>
<td>Registration Supervisor</td>
<td>AGMENU</td>
<td>AGZMENU AGZMGR AGZHOME AGZREPORTS AGZDELRN</td>
</tr>
<tr>
<td>Registration View Only</td>
<td>AGPAT – or – AGVIEWONLY</td>
<td>AGZVIEWONLY</td>
</tr>
<tr>
<td>Scheduling Clerk</td>
<td>BSDMENU</td>
<td>SDZMENU</td>
</tr>
<tr>
<td>Scheduling Supervisor</td>
<td>BSDMENU – or – BSD MENU SUPERVISOR</td>
<td>SDZMENU SDZSUP</td>
</tr>
<tr>
<td>SSN Viewer</td>
<td>AGSSNMENU</td>
<td>AGZVIEWSSN</td>
</tr>
</tbody>
</table>

In cases where there is more than one Secondary Menu Option listed in Table 8-1, only one is necessary per user. Conversely, where there is more than one Security Key listed for a specific role, all of the keys shown must be included. For example, a Scheduling Supervisor needs either the BSDMENU or BSD MENU SUPERVISOR added as a Secondary Menu Option but needs both the SDZMENU and SDZSUP Security Keys.

8.4 Open the BPRM Application

After the installation and configuration steps have been done, to open BPRM:

1. Open Internet Explorer.

2. In the Address bar, enter the IP address of your Windows application server and the port number using this form, where domain_name represents the IP address of the application server and k represents the port number you assigned in Section 6.9:

   For sites using SSL:
   
   https://domain_name:k

   For sites not using SSL:
   
   http://ip_address:k

3. If Microsoft Silverlight is not already installed on the computer, a message will display offering to download and install it. Follow the prompts to install Silverlight on the computer.

4. Once Silverlight is installed, the BPRM Log In screen (Figure 8-15) displays.
5. Type your RPMS Access Code (user name) in the Access Code field.

6. Type your RPMS Verify Code (password) in the Verify Code field.

7. Select your RPMS database from the Database list box.

**Note:** Users must have an RPMS division assigned to them before they can log into the RPMS database selected in this step.

8. Click **Login**. A screen similar to that shown in Figure 8-16 will display, although different modules may display at the bottom of the screen.

**Note:** If you specified a port other than the default in Section 6.7.3 and the opening screen is not displayed, verify that the port you specified is open on the BPRM web server.

Refer to the separate BPRM User Manuals for additional information about using the modules that make up the application suite.
Appendix A  Run the Application Installer from the Command Prompt

In cases where you do not have sufficient privileges to install the BPRM application, an error message similar to the one shown in Figure A-1 displays.

![Insufficient privileges error message](image)

Figure A-1: Insufficient privileges error message

If this happens, it will be necessary to install the application as an Administrator:

1. Navigate to \C:\Windows\system32\ on your application server.
2. Locate the cmd.exe file, right-click, and select Run as Administrator.
3. In the Command Prompt window displayed, type this command to change to the disk and directory where the BPRM application installer file is located. In this example, the file is located on drive D: in the EnsembleDatabases\bprm folder. On your system, this location will likely be different.

```
C:\Windows\system32>D:
D:\>cd EnsembleDatabases\bprm
D:\EnsembleDatabases\bprm>
```

4. At the resulting prompt, type the name of the installation file (bprm0300.08.msi in this example) and press Enter:

```
D:\EnsembleDatabases\bprm>bprm0300.08.msi
```

This will launch the BPRM setup Wizard and at that point you can follow the steps described in Section 8.1.
Appendix B  Running Multiple Instances of BPRM

For testing purposes, it may be desirable to run multiple instances of BPRM. To set up multiple instances of BPRM:

1. Create a new application pool as described in Section 6.7.1, using a unique name for your test site (i.e., BetaMoonwalk or TestMoonwalk).

2. Create a new folder (also with a unique name for your test site) as described in Section 6.7.2.

3. Add a new website as described in Section 6.7.3, using the newly created application pool and folder. Also change the port number in order to avoid conflict with the original Moonwalk website.

4. Deploy the new instance of the BPRM application by following the steps shown in Section 8.1, but select the test website and application pool during the installation process.
Appendix C  Application Server Specification Example

Table C-1 shows the specifications for a typical application server capable of running the BPRM application suite. These specifications only represent an example and are not to be considered a stringent specification.

This example is from the Dell website. At the time of initial publication of this manual, the total cost for this application server (including Windows Server 2008 software) was approximately $3,800.00.

Appendix D  Disable Logging in IIS Manager

The Internet Information Services (IIS) manager is set up by default with a logging feature which allows it to capture certain types of requests to log files in the IIS installation folder. We recommend disabling this logging feature for the Moonwalk websites as it may result in storage issues if the log file is not maintained or monitored.

The following steps show how to disable the Logging feature for each Moonwalk website setup at your site. This information can also be found on the Microsoft website at: https://technet.microsoft.com/en-us/library/cc754631%28v=ws.10%29.aspx.

1. From the Windows Start menu, select Administrative Tools.

![Figure D-1: Opening Internet Information Services (IIS) Manager](image)

2. Select Internet Information Services (IIS) Manager to display the IIS Management Console.
3. Select the **Moonwalk** website in the left pane.

4. Double-click **Logging** to display the **Logging** dialog.

5. Click **Disable** in the **Actions** pane.
Figure D-4: Disabled Logging window
Appendix E  Run Multiple BPRM Web Applications on a Single Server

For CQM purposes, it may be necessary to set up multiple instances of the same BPRM if multiple databases are hosted under one website. To set up multiple instances of BPRM:

1. Create a new application pool as described in Section 6.7.1, using a unique name for your test site (i.e., Moonwalksite1 or Moonwalksite2).

2. Create a new folder (also with a unique name for your site) as described in Section 6.7.2.

3. Add a new website as described in Section 6.7.3, using the newly created application pool and folder. Also change the port number in order to avoid conflict with the original Moonwalk website.

4. Copy the contents from the original Moonwalk folder to the new folder created in step 2.

5. In the new Moonwalk folder, go to the `Config` folder and open the `facilities.xml` file using notepad or an xml editor.

6. Remove the `<Server Id>` section for the database using the original install. If needed, manually add in the `<Server Id>` information for the database that will be using the new install. Save the file once changes are completed.

7. In the new moonwalk folder, open the `web.config` file using notepad or an xml editor to edit the file.

8. The final step is to start the new application pool and new website.
