

Measles

Measles can cause serious health issues, especially in children younger than 5 years old.

SIGNS AND SYMPTOMS

- **7-14 days** after exposure: high fever, cough, runny nose, red and watery eyes.
- **3-5 days** after the first symptoms begin: rash, usually on the face and down the body.

Common complications:

- ear infections
- diarrhea

Less frequently, severe complications like pneumonia and encephalitis can occur.

All individuals should consult with their health care providers to understand their options to get the MMR vaccine.
