### 2.1.2 Diabetes: Glycemic Control

*Changes from Version 10.0 Patch 1, as noted.*

#### Owner/Contact

Diabetes Program/Dr. Marie Russell

#### National Reporting

NATIONAL (included in IHS Performance Report; reported to OMB and Congress)

#### Denominator

**GPRA:** Active Diabetic patients; defined as all Active Clinical patients diagnosed with diabetes (POV 250.00–250.93) prior to the report period, *and* at least two visits in the past year, *and* two DM-related visits ever. The key denominator for this and all diabetes-related topics is below.

#### Numerators

1. Hemoglobin A1c documented during the report period.
2. **GPRA:** Poor control: A1c greater than (> 9.5.
3. **GPRA:** Ideal control: A1c less than (< 7.

#### Definition

**A1c**

Searches for most recent A1c test with a result during the report period. If more than one A1c test is found on the same day and/or the same visit and one test has a result and the other does not, the test with the result will be used. If an A1c test with a result is not found, CRS searches for the most recent A1c test without a result.

- A1c defined as any of the following:
  - CPT 83036, 83037, 3044F-3046F, 3047F (old code)
  - LOINC taxonomy
  - Ste-populated taxonomy DM AUDIT HGB A1C TAX.
- CPT 3044F represents A1c < 7 and will be included in the Ideal Control numerator.
GPRA 2011 Target

**Poor Glycemic Control:** During FY 2011, achieve the tentative target rate of 18.0% for the proportion of patients with diagnosed diabetes who have poor glycemic control (defined as A1c > 9.5).

**Ideal Glycemic Control:** During FY 2011, achieve the tentative target rate of 32.8% for the proportion of patients with diagnosed diabetes who have ideal glycemic control (defined as A1c < 7).

**Patient List Options**
- List of diabetic patients with a documented A1c.
- List of diabetic patients without a documented A1c.
- List of diabetic patients with poor glycemic control (A1c greater than (>) 9.5).
- List of diabetic patients with ideal glycemic control (A1c less than (<) 7).

### 2.1.3 Diabetes: Blood Pressure Control

*Changes from Version 10.0 Patch 1, as noted.*

**Owner/Contact**
Diabetes Program/Dr. Marie Russell

**National Reporting**
NATIONAL (included in IHS Performance Report; reported to OMB and Congress)

**Denominator**

**GPRA:** Active Diabetic patients; defined as all Active Clinical patients diagnosed with diabetes (POV 250.00-250.93) prior to the report period, and at least two visits in the past year, and two DM-related visits ever. The key denominator for this and all diabetes-related topics is below.

**Numerators**
1. Patients with Blood Pressure documented during the report period.
2. **GPRA:** Controlled BP, < 130/80.

**Definitions**

**BP Documented**
CRS uses mean of last three Blood Pressures (BPs) documented on non-ER visits during the report period. If three BPs are not available, uses mean of last two non-ER BPs. If a visit contains more than one BP, the lowest BP will be used, defined as having the lowest systolic value. The mean Systolic value is calculated by adding the last three (or two) systolic values and dividing by three (or two). The
mean Diastolic value is calculated by adding the diastolic values from the last three (or two) blood pressures and dividing by three (or two). If the systolic and diastolic values do not both meet the criteria for controlled, then the value is considered not controlled.

**Controlled BP**

CRS uses a mean, as described above where BP is <130/80. If the mean systolic and diastolic values do not both meet the criteria for controlled, then the value is considered not controlled.

**BP documented and Controlled BP**

If CRS is not able to calculate a mean BP from BP measurements, it will search for the most recent of any of the following CPT codes documented on non-ER visits during the report period: **Systolic:** 3074F, 3075F, or 3077F with **Diastolic:** 3078F, 3079F, or 3080F. The systolic and diastolic values do not have to be recorded on the same day. If there are multiple values on the same day, the CPT indicating the lowest value will be used. The following combination represents BP <130/80 and will be included in the Controlled BP numerator: CPT 3074F and 3078F. All other combinations will not be included in the Controlled BP numerator.

GPRA 2011 Target

During FY 2011, achieve the tentative target rate of **39.0%** for the proportion of patients with diagnosed diabetes who have achieved BP control (defined as <130/80).

**Patient List Options**

- List of diabetic patients who had their BP assessed.
- List of diabetic patients who did not have their BP assessed.
- List of diabetic patients with controlled BP, defined as <130/80.
- List of diabetic patients with uncontrolled BP, defined as >130/80.

Numerators

1. **GPRA:** Patients with LDL completed during the report period, regardless of result.
2. LDL <= 100

Definitions

**LDL**

Searches for most recent LDL test with a result during the report period. If more than one LDL test is found on the same day and/or the same visit and one test has a result and the other does not, the test with the result will be used. If an LDL test with a result is not found, CRS searches for the most recent LDL test without a result. LDL test defined as any of the following:

- CPT 80061, 83700, 83704, 83715 (old code), 83716 (old code), 83721, 3048F, 3049F, 3050F
- LOINC taxonomy

Definitions

**Patient Age**

Since the age of the patient is calculated at the beginning of the report period, the age range will be adjusted to 7–23 months at the beginning of the report period, which makes the patient between the ages of 19–35 months at the end of the report period.

**Timing of Doses**

Because IZ data comes from multiple sources, any IZ codes documented on dates within 10 days of each other will be considered as the same immunization.

**Active Immunization Package Patients Denominator**

Same as User Population definition except includes only patients flagged as active in the Immunization Package.

---

\(^{ii}\) Included with GPRA denominator only.

\(^{iii}\) Ibid.
Note: Only values for the Current Period will be reported for this denominator since currently there is not a way to determine if a patient was active in the Immunization Package during the previous year or baseline periods.

Dosage and Types of Immunizations

- **4 Doses of DTaP**
  - 4 DTaP/DTP/Tdap
  - 1 DTaP/DTP/Tdap and 3 DT/Td
  - 1 DTaP/DTP/Tdap and 3 each of Diphtheria and Tetanus
  - 4 DT and 4 Acellular Pertussis
  - 4 Td and 4 Acellular Pertussis, or
  - 4 each of Diphtheria, Tetanus, and Acellular Pertussis

- **3 Doses of Polio**
  - 3 OPV
  - 3 IPV, or
  - Combination of OPV & IPV totaling 3 doses

- **1 Dose of MMR**
  - MMR
  - 1 M/R and 1 Mumps
  - 1 R/M and 1 Measles, or
  - 1 each of Measles, Mumps, and Rubella

- 3 doses of Hep B OR 2 doses IF documented with CPT 90743

- 3 doses of HIB

- 1 dose of Varicella

- 4 doses of Pneumococcal

**NMI refusals, Contraindication, and Evidence of Disease Information**

- NMI refusals, evidence of disease, and contraindications for individual immunizations will also count toward meeting the definition, as defined below.

Note: NMI refusals are *not* counted as refusals; rather, they are counted as contraindications.
To be counted as evidence of disease/contraindication/NMI refusal, a patient must have evidence of disease, a contraindication, or an NMI refusal for any of the immunizations in the numerator. For example, if a patient was Rubella immune but had a Measles and Mumps immunization, the patient would be counted as having evidence of disease for MMR.

For immunizations where required number of doses is >1, only one contraindication is necessary to be counted in the numerator. For example, if there is a single contraindication for HiB, the patient will be included in the numerator.

Evidence of disease will be checked for at any time in the child's life (prior to the end of the report period).

A. Of Numerator 1, patients considered overweight, adults BMI 25–29, age 18 and under based on standard tables.

B. Of Numerator 1, patients considered obese, adults BMI =>30, age 18 and under based on standard tables.

C. Of Numerator 1, total overweight and obese.

D. Of Numerator 1, patients with documented refusal in past year.

Definitions

BMI

Calculated using NHANES II. For 18 and under, a height and weight must be taken on the same day any time during the report period. For 19 through 50, height and weight within last five years, not required to be on same day. For over 50, height and weight within last two years, not required to be on same day.

Patients whose BMI either is greater or less than the Data Check Limit range shown in the BMI Standard Reference Data Table in PCC will not be included in the report counts for Overweight or Obese.

Refusals

Include REF (refused), NMI (not medically indicated) and UAS (unable to screen) and must be documented during the past year. For ages 18 and under, both the height and weight must be refused on the same visit at any time during the past year. For ages 19 and older, the height and the weight must be refused during the past year and are not required to be on the same visit.

Target

Increase the number of patients for whom BMI data can be measured by 5%.

Patient List Options

2.6.2 Childhood Weight Control

Owner/Contact

Nutrition Program, Jean Charles-Azure

National Reporting

NATIONAL (included in IHS Performance Report; not reported to OMB and Congress)
Denominator

Active Clinical Patients 2–5 for whom a BMI could be calculated, broken out by age groups.

Numerators

1. Patients with a BMI in the 85\textsuperscript{th} to 94\textsuperscript{th} percentile.
2. Patients with a BMI at or above the 95\textsuperscript{th} percentile.
3. Patients with a BMI at or above the 85\textsuperscript{th} percentile.

Definitions

**Age**

All patients who are between the ages of 2 and 5 at the beginning of the report period and who do not turn age 6 during the report period are included in this measure. Age in the age groups is calculated based on the date of the most current BMI found. For example, a patient may be 2 at the beginning of the time period but is 3 at the time of the most current BMI found. That patient will fall into the Age 3 group.

**BMI**

CRS looks for the most recent BMI in the report period. CRS calculates BMI at the time the report is run, using NHANES II. A height and weight must be taken on the same day any time during the report period. The BMI values for this measure are reported differently than in Obesity Assessment since this age group is children ages 2–6, whose BMI values are age-dependent. The BMI values are categorized as Overweight for patients with a BMI in the 85\textsuperscript{th} to 94\textsuperscript{th} percentile and Obese for patients with a BMI at or above the 95\textsuperscript{th} percentile.

Patients whose BMI either is greater or less than the Data Check Limit range, as shown in the following table, will not be included in the report counts for Overweight or Obese.

Definitions

**Infant Feeding Choice**

The documented feeding choice from the file V Infant Feeding Choice that is closest to the exact age that is being assessed will be used. For example, if a patient was assessed at 45 days old as 1/2 breastfed and 1/2 formula and assessed again at 65 days old as mostly breastfed, the mostly breastfed value will be used since it is closer to the exact age of 2 months (i.e., 60 days). Another example is a patient who was assessed at 67 days as mostly breastfed and again at 80 days as mostly formula. In this case, the 67 days value of mostly breastfed will be used. The other exact ages are 180 days for 6 months, 270 days for 9 months, and 365 days for 1 year.

In order to be included in the age-specific screening numerators, the patient must have been screened at the specific age range. For example, if a patient was screened at 6 months and was exclusively breastfeeding but was not screened at 2 months, then the patient will only be counted in the 6 months numerator.

**2011 Target**

During FY 2011, achieve the tentative target rate of 31% for the proportion of 2-month olds who are mostly or exclusively breastfeeding.
