

RESOURCE AND PATIENT MANAGEMENT SYSTEM

# **Clinical Reporting System (CRS)**

## **(BGP)**

### **Technical Manual**

Version 9.0  
July 2009

Office of Information Technology (OIT)  
Division of Information Resource Management  
Albuquerque, New Mexico

## Preface

This manual contains the technical manual for the Clinical Reporting System (CRS) version 9.0, which adds fiscal year (FY) 2009 clinical performance measures to existing FY 2002 through FY 2008 measures.

## Document Version History

Version	Date	Notes
1.0	August 2005	Initial version
8.0	August 2008	Updated to include changes to the logic descriptions and performance measures for FY 2008 and reformatted
9.0	June 2009	Updated for version 9.0

## 1.0 Introduction

This manual provides Indian Health Service (IHS) site managers with a technical description of the Clinical Reporting System routines, files, menus, cross references, globals, and other necessary information required to effectively manage the system.

All routines, files, options, and keys are namespaced starting with the letters “bgp”

The file number range for this package is 90240, 90370 AND 90530-90539.

The Government Performance and Results Act (GPRA) requires federal agencies to report annually on how the agency measured against the performance targets set in its annual plan. The IHS GPRA measures include measures for clinical prevention and treatment, quality of care, infrastructure, and administrative efficiency functions.

The IHS Clinical Reporting System (CRS) is a Resource and Patient Management System (RPMS) software application designed for national reporting, as well as area and local monitoring of clinical GPRA and developmental measures. CRS was first released for fiscal year (FY) 2002 performance measures (as GPRA+) and is based on a design by the Aberdeen Area (GPRA2000).

This manual provides instructions on using the CRS. Version 9.0 adds FY 2009 clinical performance measures to existing FY 2002 through FY 2008 measures.

CRS is the reporting tool used by the IHS Office of Planning and Evaluation to collect and report clinical performance results annually to the Department of Health and Human Services (DHHS) and to Congress.

Each year, an updated version of CRS software is released to reflect changes in the logic descriptions of the different denominators and numerators. Additional performance measures may also be added. Local facilities can run reports as often as they want and can also use CRS to transmit data to their Area Office. The Area Office can use CRS to produce an aggregated area report for either annual GPRA or Area Director Performance reports.

CRS produces reports on demand from local RPMS databases for both GPRA and developmental clinical performance measures that are based on RPMS data; thus, eliminating the need for manual chart audits for evaluating and reporting clinical measures.

To produce reports with comparable data across every facility, the GPRA measures definitions were “translated” into programming code with the assistance of clinical subject matter experts. CRS uses predefined taxonomies to find data items in the RPMS Patient Care Component (PCC) to determine if a patient meets the performance measure criteria. Taxonomies contain groups of codes (e.g., diagnoses or procedures) or site-specific terms. Each performance measure topic has one or more defined denominators and numerators.

Administrative and clinical users can review individual or all measures at any time to

- Identify potential data issues in their RPMS, for example, missing or incorrect data.
- Monitor their site’s performance against past national performance and upcoming agency goals.
- Identify specific areas where the facility is not meeting the measure in order to initiate business process or other changes.
- Quickly measure impact of process changes on performance measures.
- Identify IHS Areas meeting or exceeding measures to provide lessons learned.

Users of the RPMS CRS include

Area and site Quality Improvement staff.

Compliance Officers.

GPRA Coordinators.

Clinical staff, such as physicians, nurses, nurse practitioners, and other providers.

Area Directors.

Any staff involved with quality assurance initiatives.

Staff who run the various CRS reports.

## 2.0 Implementation and Maintenance

The Clinical Reporting System occupies the BGP namespace. Options, security locks/keys, templates, routines, and globals are namespaced BGP.

Note: This version of the Clinical Reporting System (9.0) only contains the 2009 files, options, routines, templates, etc. Previous versions were distributed with version 8.0, through patch 3. This was done at the request of the verification staff due to the size of this package. Version 8.0 is a requirement to install version 9.0. Please see the version 8.0 technical manual for information about all previous versions.

### 2.1 System Requirements

- Kernel v8.0 or higher
- FileMan v21 or higher
- IHS PCC Suite v1.0 through patch 2 (bjpc0100.02k)
- IHS Clinical Reporting System version 8.0 through patch 3 (bgp\*8.0\*3)

### 2.2 Security Keys

Table 2-1 provides security key information.

**Table 2-1.** BGP Security Keys

Name	Descriptive Name	Description
BGPZAREA	BGP AREA REPORT	This key unlocks the area report options on the main BGPMENU. This key should only be assigned at the Area Office level.
BGPZMENU	BGP MAIN MENU - CRS	This key unlocks the main CRS menu. It should be assigned to all users who need to run GPRA/CRS reports.
BGPZ PATIENT LISTS	BGP PATIENT LISTS	This key allows the holder to obtain patient lists. The patient lists contain sensitive patient/clinical information. This key should only be given to those users who have a need for such information.

---

<b>Name</b>	<b>Descriptive Name</b>	<b>Description</b>
BGPZ SITE PARAMETERS	BGP SITE PARAMETERS	This key should be given to those with authority to update the site parameters.
BGPZ TAXONOMY EDIT	BGP TAXONOMY EDIT	This key should be given only to users who need to update taxonomies.

## 3.0 Routines

This section includes a table that lists BGP routines and their descriptions.

Please note that the only routines distributed in version 9.0 are the BGP9\* routines, Version 8.0 is a requirement for the installation of version 9.0 and contains all other BGP\* routines. This was done at the request of the verification staff and is due to the large size of the build.

### 3.1 Routines and Descriptions

Table 3-1 provides a list of routines with comprehensive descriptions of the function.

**Table 3-1.** BGP Routines

<b>Routine</b>	<b>Description</b>

## 4.4 Table File

The following twelve files have over 1,000 fields per file. These files are used to hold calculated data values for the GPRA reports. To conserve space in this document, the table files are not listed here. To generate a listing, use the ^XBFLD or FM data dictionary listing utility to list the data dictionary in detail.

## 6.2 Callable Routines

Published entry points for use by iCARE:

Routine: BGP9D10

BQI(DFN,BQIGREF);PEP - iCare EP

- ;Description
  - ; Entry point called by the iCare module, returns GPRA data by global reference
- ; DFN = Patient internal entry number
  - ; BQIGREF = Global reference to store data

## 6.3 Published Entry Points

## 6.4 Exported Options

Table 6-1 shows the exported BGP option names and descriptions.

**Table 6-1.** Exported BGP Options

Option Name	Description
BGP 02 MENU	GPRA+ FY02

<b>Option Name</b>	<b>Description</b>
BGP 03 AREA AREA	Run Area Office Annual Clinical Report (Area Only)
BGP 03 AREA GPRA	Run Area Office GPRA Report (to be used at Area Office only)
BGP 03 AREA MENU	Area Office Options
BGP 03 EDIT SITE PARAMETERS	Site Parameters
BGP 03 MAIN MENU	GPRA+ FY03
BGP 03 MENU REPORTS	Reports
BGP 03 MENU SETUP	System Setup
BGP 03 RPT AREA PERF	Run Area Office Annual Performance Report for Area Export
BGP 03 RPT GPRA AREA EXPT	Run GPRA Report for Area Office Export
BGP 03 RPT LOCAL USE	Run Indicator Reports for Local Use
BGP 03 TAXONOMY CHECK	Check for Taxonomies Required by the GPRA Report
BGP 03 TAXONOMY SETUP	Taxonomy Setup
BGP 03 UPLOAD TO AREA	Upload Report Files from Site
BGP 04 AREA AREA	Run Area Office Director Report (Area Office Only)
BGP 04 AREA DIR REPORT	Area Office Director's Performance Report
BGP 04 AREA GPRA	Run Area Office GPRA Report
BGP 04 AREA HEDIS	Run Area Office HEDIS Report
BGP 04 AREA MENU	Area Office Options
BGP 04 HEDIS AREA REPORT	Run Area Office HEDIS Report
BGP 04 HEDIS REPORT	HEDIS Performance Report
BGP 04 LIST FILES	List files in a directory
BGP 04 MAIN MENU	GPRA+ FY04
BGP 04 REPORT GPRA	GPRA Performance Report
BGP 04 REPORTS MENU	Reports
BGP 04 SEL ALL PATS	Selected Indicators with No Community Defined
BGP 04 SEL PATIENT PANEL	Selected Indicators w/Patient Panel Population
BGP 04 SELECTED IND REPORT	Selected Indicators w/Community Taxonomy Defined
BGP 04 SITE PARAMETERS	Site Parameters
BGP 04 SYSTEM SETUP	System Setup
BGP 04 TAXONOMY CHECK	Check for Taxonomies Required by FY 04 GPRA Report
BGP 04 TAXONOMY SETUP	Taxonomy Setup
BGP 04 UPLOAD FILES	Upload Report Files from Site
BGP 05 AREA ELDER REPORT	Run Area Office Elder Care Report

<b>Option Name</b>	<b>Description</b>
BGP 05 AREA GPRA	Run Area Office National GPRA Report
BGP 05 AREA GPU	Run Area Office GPRA Performance Report
BGP 05 AREA HEDIS	Run Area Office HEDIS Report
BGP 05 AREA MENU	Area Office Options
BGP 05 CMS PERF RPT	CMS Performance Report

## 7.0 Security Keys

Table 2-1 provides the BGP security keys and their descriptions.

## **8.0 Archiving and Purging**

There is no archiving and purging in this package.

## 9.0 Documentation Resources

This section describes a few methods to generate online technical documentation.

### 9.1 How to Generate Online Documentation

The file number range for this package is 90240, 90370 and 90530-90539. The namespace is BGP. All templates, routines, screen forms, and so on begin with BGP.

This section describes some methods by which users can generate IHS RPMS CRS technical documentation. Online technical documentation pertaining to the IHS RPMS clinical reporting software, in addition to that which is located in the help prompts and on the help screens throughout the IHS RPMS Clinical Reporting package, can be generated through the use of several kernel options. These include, but are not limited to, the sections that follow.

### 9.2 System Documentation

Online VPS system documentation can be generated through the use of several kernel options, including, but not limited to:

- %INDEX
- Menu Management
- Inquire Option
- Print Option File
- VA FileMan
- Data Dictionary Utilities
- List File Attributes

For more option listings and further information about other utilities that supply online technical information, see the Decentralized Hospital Computer Program (DHCP) Kernel Reference manual.

### 9.2.1 %INDEX

The %INDEX option analyzes the structure of a routine to determine, in part, if the routine adheres to RPMS programming standards. The output can include the following components:

- Compiled list of errors and warnings
- Routine listings
- Local variables
- Global variables
- Naked globals
- Label references
- External references

Running %INDEX for a specified set of routines allows users to discover any deviations from RPMS programming standards that exist, and to see how routines interact with one another (i.e., which routines call or are called by other routines).

To run %INDEX for the IHS RPMS Clinical Reporting package, specify the BGP namespace at the “Routine(s)?>” prompt.

### 9.2.2 Inquire Option

The Inquire menu management option provides the following information about a specified option:

- Option name
- Menu text
- Option description
- Type of option
- Lock (if any)

In addition, all items on the menu are listed for each menu option. To secure information about IHS RPMS Clinical Reporting options, you must specify the BGP namespace.

### 9.2.3 Print Option File

**Note:** The Print Option File utility generates a listing of options from the Option file (#19). You can print all entries, a single option, or range of options. For a list of IHS RPMS Clinical Reporting options, see Section 0.

**Note:** There are no Published Entry Points for this application.

Exported Options.

### 9.2.4 List File Attributes

This VA FileMan option allows users to generate documentation pertaining to files and file structure. The standard format of this option provides the following data dictionary information for a specified file:

- File name and description
- Identifiers
- Cross-references
- Files pointed to by the file specified
- Files that point to the file specified
- Input, print, and sort templates

In addition, the following applicable data is supplied for each field in the file:

- Field name, number, title, and description
- Global location
- Help prompt
- Cross-references
- Input transform
- Date last edited
- Notes

Using the Global Map format of this option generates an output that lists the following information:

- All cross references for the file selected
- Global location of each field in the file
- Input, print, and sort templates

For a comprehensive listing of CLINICAL files, see Section 4.0, “Files and Tables.”

### 9.3 Online Help

In addition to system documentation, RPMS includes special help displays for most menu options and data entry prompts. Typing ? at the “Select . . . Option” prompt displays information related to the current option, where:

Typing . . .	Displays . . .
A single question mark (?)	A list of all options accessible from the current option
Two question marks (??)	A list of all accessible options and their formal names
Three question marks (???)	A brief description for each option in a menu
A single question mark (?) followed by an option name (?OPTION)	Extended help, if available, for that option

## 10.0 SAC Requirements

This program uses a standard global for export of data to the Area Office. The global is called ^BGPDATA (and is killed at the root level in various routines).

The kill of these unsubscripted globals has been approved by the Standards and Conventions committee.

## 11.0 Glossary

### Archiving

The storage of historical or little-used data off-line (often on tape).

### Banner

A line of text with a user's name and domain.

### Browser

An interactive application that displays ASCII text on a terminal that supports a scroll region. The text can be in the form of a word-processing field or sequential local or global array. The user is allowed to navigate freely within the document.

### Callable EntryPoints

Places in a routine that can be called from an application program.

### Cross Reference

An indexing method whereby files can include presorted lists of entries as part of the stored database. Cross references (x-refs) facilitate look-up and reporting.

### Entry Point

A point within a routine that is referenced by a "DO" or "GOTO" command from a routine internal to a package.

### File

A set of related records or entries treated as a single unit.

### FileMan

The database management system for RPMS.

### Global

In MUMPS, global refers to a variable stored on disk (global variable) or the array to which the global variable may belong (global array).

### ICD

International Classification of Diseases.

**INDEX (%INDEX)**

A kernel utility used to verify routines and other MUMPS code associated with a package. Checking is done according to current ANSI MUMPS standards and RPMS programming standards. This tool can be invoked through an option or from direct mode (>D ^%INDEX).

**IRM**

Information Resource Management. The IHS personnel responsible for information systems management and security.

**Kernel**

The set of MUMPS software utilities that function as an intermediary between the host operating system and application packages, such as Laboratory and Pharmacy. The kernel provides a standard and consistent user and programmer interface between application packages and the underlying MUMPS implementation. These utilities provide the foundation for RPMS.

**Menu**

A list of choices for computing activity. A menu is a type of option designed to identify a series of items (other options) for presentation to the user for selection. When displayed, menu-type options are preceded by the word "Select" and followed by the word "option," as in "Select Menu Management option:" (the menu's select prompt).

**Namespace**

A unique set of 2 to 4 alpha characters that are assigned by the database administrator to a software application.

**Option**

An entry in the Option file. As an item in a menu, an option provides an opportunity for users to select it, thereby invoking the associated computing activity. Options may also be scheduled to run in the background, noninteractively, by TaskMan.

**Patient Care Component (PCC)**

The central repository for data in the Resource and Patient Management System (RPMS).

**Queuing**

A request that a job be processed at a later time rather than within the current session.

**Routine**

A program or sequence of instructions called by a program that may have some general or frequent use. MUMPS routines are groups of program lines that are saved, loaded, and called as a single unit via a specific name.

**UCI**

User Class Identification. A computing area.

**Up-Hat (^)**

A circumflex, also known as a “hat” or “caret,” used as a piece delimiter in a global. The up-hat is denoted as “^” and is typed by pressing SHIFT+6 on the keyboard.

**Utility**

A callable routine line tag or function. A universal routine usable by anyone.

**Variable**

A character or group of characters that refers to a value. MUMPS recognizes three types of variables: local variables, global variables, and special variables. Local variables exist in a partition of the main memory and disappear at signoff. A global variable is stored on disk, potentially available to any user. Global variables usually exist as parts of global arrays.

## 12.0 Contact Information

If you have any questions or comments regarding this distribution, please contact the OIT Help Desk (IHS).

**Phone:** (505) 248-4371 or (888) 830-7280 (toll free)

**Fax:** (505) 248-4297
