A1c
Searches for most recent A1c test with a result during the report period. If more than one A1c test is found on the same day or the same visit and one test has a result and the other does not, the test with the result will be used.

If an A1c test with a result is not found, CRS searches for the most recent A1c test without a result.

- A1c defined as any of the following:
  – Current Procedural Terminology (CPT) 83036, 83037, 3044F to 3046F, 3047F (old code)

2.1.3.2  **National Reporting**
NATIONAL (included in IHS Performance Report; reported to OMB and Congress)

2.1.3.3  **Denominators**
1. GPRA: Active Diabetic patients; defined as all Active Clinical patients diagnosed with diabetes (POV 250.00 through 250.93) prior to the report period, and at least two visits in the past year, and two DM-related visits ever. The key denominator for this and all diabetes-related topics follows.

2.1.3.4  **Numerators**
1. Patients with BP documented during the report period.
2. GPRA: Controlled BP, less than 130/80.
Definitions

Diabetes
First DM POV 250.00 through 250.93 recorded in the V POV file prior to the report period.

BP Documented
CRS uses mean of last three BPs documented on non-emergency room (ER) visits during the report period. If three BPs are not available, uses mean of last two non-ER BPs. If a visit contains more than one BP, the lowest BP will be used, defined as having the lowest systolic value. The mean Systolic value is calculated by adding the last three (or two) systolic values and dividing by three (or two). The mean Diastolic value is calculated by adding the diastolic values from the last three (or two) BPs and dividing by three (or two). If the systolic and diastolic values do not both meet the criteria for controlled, then the value is considered not controlled.

If CRS is not able to calculate a mean BP, it will search for CPT 0001F, 2000F, 3074F through 3080F or POV V81.1 documented on a non-ER visit during the Report Period.

Controlled BP
CRS uses a mean, as described above where BP is less than 130/80. If the mean systolic and diastolic values do not both meet the criteria for controlled, then the value is considered not controlled.

BP documented and Controlled BP
If CRS is not able to calculate a mean BP from BP measurements, it will search for the most recent of any of the following codes documented on non-ER visits during the report period:

- BP Documented: CPT 0001F or 2000F or POV V81.1; OR
- Systolic: CPT 3074F, 3075F, or 3077F WITH Diastolic: CPT 3078F, 3079F, or 3080F. The systolic and diastolic values do not have to be recorded on the same day. If there are multiple values on the same day, the CPT indicating the lowest value will be used.
- The following combination represents BP less than 130/80 and will be included in the Controlled BP numerator: CPT 3074F and 3078F. All other combinations will not be included in the Controlled BP numerator.
2.1.3.6 GPRA 2012 Target
During FY 2012, achieve the tentative target rate of 38.7% for the proportion of patients with diagnosed diabetes who have achieved BP control (defined as less than 130/80).

2.1.3.7 Patient Lists
- List of diabetic patients who had their BP assessed.
- List of diabetic patients who did not have their BP assessed.
- List of diabetic patients with controlled BP, defined as below 130/80.
- List of diabetic patients with uncontrolled BP, defined as above 130/80.

2.1.4.5 Definitions
Diabetes
First DM POV 250.00 through 250.93 recorded in the V POV file prior to the report period.
LDL

Searches for most recent LDL test with a result during the report period. If more than one LDL test is found on the same day or the same visit and one test has a result and the other does not, the test with the result will be used. If an LDL test with a result is not found, CRS searches for the most recent LDL test without a result.

- LDL test defined as any of the following:
  - CPT 80061, 83700, 83701, 83704, 83715 (old code), 83716 (old code), 83721, 3048F, 3049F, 3050F

2.3.3.5 Definitions

Patient Age
Since the age of the patient is calculated at the beginning of the report period, the age range will be adjusted to 7 through 23 months at the beginning of the report period, which makes the patient between the ages of 19 through 35 months at the end of the report period.

Timing of Doses
Because IZ data comes from multiple sources, any IZ codes documented on dates within 10 days of each other will be considered as the same immunization.

Active Immunization Package Patients Denominator
Same as User Population definition except includes only patients flagged as active in the Immunization Package.

Note: Only values for the Current Period will be reported for this denominator since currently there is not a way to determine if a patient was active in the Immunization Package during the previous year or baseline periods.

Dosage and Types of Immunizations
- Four Doses of DTaP
  - Four DTaP or DTP or Tdap
  - One DTaP or DTP or Tdap and three DT or Td
  - One DTaP or DTP or Tdap and three each of Diphtheria and Tetanus
  - Four DT and four Acellular Pertussis
  - Four Td and four Acellular Pertussis, or
  - Four each of Diphtheria, Tetanus, and Acellular Pertussis
- Three Doses of Polio
  - Three OPV
  - Three IPV, or
  - Combination of OPV & IPV totaling three doses
- One Dose of MMR
  - MMR
  - One M/R and one Mumps
  - One R/M and one Measles, or
  - One each of Measles, Mumps, and Rubella
- Three doses of Hep B
• Three doses of HIB
• One dose of Varicella
• Four doses of Pneumococcal

**NMI refusals, Contraindication, and Evidence of Disease Information**

NMI refusals, evidence of disease, and contraindications for individual immunizations will also count toward meeting the definition, as defined below.

**Note:** NMI refusals are *not* counted as refusals; rather, they are counted as contraindications.

• Each immunization must be refused and documented separately. For example, if a patient has an NMI refusal for Rubella only, then there must be an immunization, contraindication, or separate NMI refusal for the Measles and Mumps immunizations.

• For immunizations where required number of doses is greater than one, only one NMI refusal is necessary to be counted in the numerator. For example, if there is a single NMI refusal for Hepatitis B, the patient will be included in the numerator.

• To be counted as evidence of disease or contraindication or NMI refusal, a patient must have evidence of disease, a contraindication, or an NMI refusal for any of the immunizations in the numerator. For example, if a patient was Rubella immune but had a Measles and Mumps immunization, the patient would be counted as having evidence of disease for MMR.

• For immunizations where required number of doses is greater than one, only one contraindication is necessary to be counted in the numerator. For example, if there is a single contraindication for HiB, the patient will be included in the numerator.

• Evidence of disease will be checked for at any time in the child's life (prior to the end of the report period.).

**Note:** In FY 2011, the GPRA measure changed to the 4:3:1:3:3:1:4 combination, which includes pneumococcal.

### 2.3.3.7 Patient Lists

**Note:** Because age is calculated at the beginning of the report period, the patient’s age on the list will be between 7 and 23 months.

If a patient did not have all doses in a multiple dose vaccine, the IZ will not be listed. For example, if a patient only had two DTaP, no IZ will be listed for DTaP.
- List of Active Immunization Package patients 19 through 35 months who received the 4:3:1:3:3 combination (four DTaP, three Polio, one MMR, three HiB, three Hep B).

Age

All patients who are between the ages of two and five at the beginning of the report period and who do not turn age six during the report period are included in this measure. Age in the age groups is calculated based on the date of the most current BMI found. For example, a patient may be two at the beginning of the time period but is three at the time of the most current BMI found. That patient will fall into the Age three group.

BMI

CRS looks for the most recent BMI in the report period. CRS calculates BMI at the time the report is run, using NHANES II. A height and weight must be taken on the same day any time during the report period. The BMI values for this measure are reported differently than in Obesity Assessment since this age group is children ages two through six, whose BMI values are age-dependent. The BMI values are categorized as Overweight for patients with a BMI in the 85th through 94th percentile and Obese for patients with a BMI at or above the 95th percentile.

Patients whose BMI either is greater or less than the Data Check Limit range, as shown in the following table, will not be included in the report counts for Overweight or Obese.

2.8.1.5 Definitions

Infant Feeding Choice

The documented feeding choice from the file V Infant Feeding Choice that is closest to the exact age that is being assessed will be used. For example, if a patient was assessed at 45 days old as half breastfed and half formula and assessed again at 65 days old as mostly breastfed, the mostly breastfed value will be used since it is closer to the exact age of two months (i.e., 60 days). Another example is a patient who was assessed at 67 days as mostly breastfed and again at 80 days as mostly formula. In this case, the 67 days value of mostly breastfed will be used. The other exact ages are 180 days for 6 months, 270 days for nine months, and 365 days for one year.

In order to be included in the age-specific screening numerators, the patient must have been screened at the specific age range. For example, if a patient was screened at six months and was exclusively breastfeeding but was not screened at two months, then the patient will only be counted in the six months numerator.

2.8.1.6 2012 Target

During FY 2012, achieve the tentative target rate of 27.4% for the proportion of two-month olds who are mostly or exclusively breastfeeding.

2.8.1.7 Patient Lists

- List of Active Clinical patients 30 through 394 days who were not screened for Infant Feeding Choice at least once.
