1.0 CRS Selected Measures (Local) Report

The performance measure topics and their definitions that are included in the Clinical Reporting System (CRS) 2012 version 12.0 Selected Measures (Local) Report are shown in Section 2.0. Performance measures that are also included in the National Government Performance and Results Act of 1993 (GPRA) and Program Assessment Rating Tool (PART) Report are shown in Section 1.1.

Many performance measure topics include both the Active Clinical and User Population denominators. For brevity, the User Population denominator is not listed separately. To see which topics include the User Population denominator, refer to the CRS Clinical Performance Measure Logic Manual for FY 2012 Clinical Measures.

1.1 Performance Measures Included in the CRS 2012 National GPRA and PART Report

The following performance measures are reported in the CRS 2012 National GPRA and PART Report.

Key: **Bold** font indicates official GPRA measures reported in the National GPRA Report submitted to Office of Management and Budget (OMB) and Congress.

Italic font indicates changes from CRS version 11.1.

A plus sign (+) indicates that this is not an official GPRA measure but is included in the National GPRA Report provided to OMB and Congress to provide context to a GPRA measure(s).

One asterisk prior to the topic (*) indicates that this is not an official GPRA measure and is not included in the National GPRA Report provided to OMB and Congress. This measure is included to provide context to a GPRA measure(s).

Two asterisks (**) indicate a PART measure included in the GPRA and PART Report submitted to OMB.

2.1.2.5 Definitions

Diabetes

First POV 250.00–250.93 recorded in the V POV file prior to the report period.

A1c

Searches for most recent A1c test with a result during the report period. If none found, CRS searches for the most recent A1c test without a result.

A1c defined as:

- CPT 83036, 83037, 3044F-3046F, 3047F (old code)
- LOINC taxonomy
- Site-populated taxonomy DM AUDIT HGB A1C TAX

BP Documented

BP documented is defined as having a minimum of two BPs documented on non-Emergency Room (ER) visits during the report period.

CRS uses mean of last three BPs documented on non-ER visits during the report period. If three BPs are not available, uses mean of last two non-ER BPs. If a visit contains more than one BP, the lowest BP will be used, defined as having the lowest systolic value. The mean Systolic value is calculated by adding the last three (or two) systolic values and dividing by three (or two). The mean Diastolic value is calculated by adding the diastolic values from the last three (or two) blood pressures and dividing by three (or two).

If CRS is not able to calculate a mean BP, it will search for Current Procedural Terminology (CPT) 0001F, 2000F, 3074F–3080F *or* **POV V81.1** documented on a non-ER visit during the report period.

Controlled BP

CRS uses a mean, as described above. If the mean systolic and diastolic values do not *both* meet the criteria for controlled, then the value is considered not controlled.

BP Documented and Controlled BP

If CRS is not able to calculate a mean BP from blood pressure measurements, it will search for the most recent of any of the following codes documented on non-ER visits during the report period:

- BP Documented: CPT 0001F or 2000F *or* **POV V81.1**; OR
- **Systolic:** CPT 3074F, 3075F, or 3077F *with* **Diastolic:** CPT 3078F, 3079F, or 3080F. The systolic and diastolic values do *not* have to be recorded on the same day. If there are multiple values on the same day, the CPT indicating the lowest value will be used.
- The following combination represents BP <130/80 and will be included in the Controlled BP numerator: CPT 3074F *and* 3078F. All other combinations will *not* be included in the Controlled BP numerator.

LDL

Finds last test done during the report period; defined as one of the following:

- CPT 80061, 83700, 83701, 83704, 83715 (old code), 83716 (old code), 83721, 3048F, 3049F, 3050F

Searches for most recent A1c test with a result during the report period. If more than one A1c test is found on the same day and/or the same visit and one test has a result and the other does not, the test with the result will be used.

If an A1c test with a result is not found, CRS searches for the most recent A1c test without a result.

- A1c defined as any of the following:
 - CPT 83036, 83037, 3044F-3046F, 3047F (old code)
 - LOINC taxonomy
 - Site-populated taxonomy DM AUDIT HGB A1C TAX
- Without result is defined as A1c documented but with no value.
- CPT 3044F represents A1c < 7 and will be included in the Ideal Control numerator.

2.1.3.6 GPRA 2012 Description

Poor Glycemic Control: During FY *2012*, achieve the tentative target rate of *18.6%* for the proportion of patients with diagnosed diabetes who have poor glycemic control (defined as A1c > 9.5).

 - Whose first ever DM diagnosis occurred prior to the report period
 - Who had at least two DM related visits ever

- With at least one encounter with DM POV in a primary clinic with a primary provider during the report period
- Never have had a creatinine value greater than 5

2.1.4.4 Numerators

2. **GPRA:** Patients with controlled BP, defined as < 130/80, i.e., the mean systolic value is less than 130 *and* the mean diastolic value is less than 80.
3. Patients with BP that is not controlled.

BP Documented

CRS uses mean of last three BPs documented on non-ER visits during the report period. If three BPs are not available, uses mean of last two non-ER BPs. If a visit contains more than one BP, the lowest BP will be used, defined as having the lowest systolic value. The mean Systolic value is calculated by adding the last three (or two) systolic values and dividing by three (or two). The mean Diastolic value is calculated by adding the diastolic values from the last three (or two) BPs and dividing by three (or two).

If CRS is not able to calculate a mean BP, it will search for CPT 0001F, 2000F, 3074F–3080F *or* **POV V81.1** documented on a non-ER visit during the report period.

Controlled BP

CRS uses a mean, as described above where BP is <130/80. If the mean systolic and diastolic values do not *both* meet the criteria for controlled, then the value is considered not controlled.

BP Documented and Controlled BP

If CRS is not able to calculate a mean BP from blood pressure measurements, it will search for the most recent of any of the following codes documented on non-ER visits during the report period:

- BP Documented: CPT 0001F or 2000F *or POV V81.1*; OR
- **Systolic:** CPT 3074F, 3075F, or 3077F WITH **Diastolic:** CPT 3078F, 3079F, or 3080F. The systolic and diastolic values do not have to be recorded on the same day. If there are multiple values on the same day, the CPT indicating the lowest value will be used.
- The following combination represents BP <130/80 and will be included in the Controlled BP numerator: CPT 3074F *and* 3078F. All other combinations will *not* be included in the Controlled BP numerator.

2.1.4.6 GPRA 2012 Description

2.3.3.5 Definitions

Patient Age

Since the age of the patient is calculated at the beginning of the report period, the age range will be adjusted to 7–23 months at the beginning of the report period, which makes the patient between the ages of 19–35 months at the end of the report period.

Timing of Doses

Because IZ data comes from multiple sources, any IZ codes documented on dates within 10 days of each other will be considered as the same immunization.

Active Immunization Package Patients Denominator

Same as User Population definition *except* includes only patients flagged as active in the Immunization Package.

Note: Only values for the current period will be reported for this denominator since currently there is not a way to determine if a patient was active in the Immunization Package during the previous year or baseline periods.

Dosage and Types of Immunizations

- **Four Doses of DTaP**
 - Four DTaP/DTP/Tdap
 - One DTaP/DTP/Tdap and three DT/Td
 - One DTaP/DTP/Tdap and three each of Diphtheria and Tetanus
 - Four DT and four Acellular Pertussis
 - Four Td and four Acellular Pertussis
 - Four each of Diphtheria, Tetanus, and Acellular Pertussis
- **Three Doses of Polio**
 - Three OPV
 - Three IPV
 - Combination of OPV and IPV totaling three doses
- **One Dose of MMR**
 - MMR
 - One M/R and one Mumps
 - One R/M and one Measles
 - One each of Measles, Mumps, and Rubella
- **Three doses of Hep B *OR two doses IF documented with CPT 90743***
- **Three doses of HIB**
- **One dose of Varicella**
- **Four doses of Pneumococcal**
- **Two doses of Hep A**
- **Two or three doses of Rotavirus, depending on the vaccine administered**
- **Two doses of Influenza**

Refusal, Contraindication, and Evidence of Disease Information

Except for the Immunization Program Numerators, NMI refusals, evidence of disease and contraindications for individual immunizations will also count toward meeting the definition, as defined below. Refusals will count toward meeting the definition for refusal numerators only.

Note: NMI refusals are not counted as refusals; rather, they are counted as contraindications.

- For immunizations that allow a different number of doses (e.g. two or three Rotavirus): To count toward the numerator with the smaller number of doses, all of the patient's vaccinations must be part of the smaller dose series. For example, for a patient to count toward the Rotavirus numerator with only two doses, all two doses must be included in the 2-dose series codes listed in the Rotavirus definition. A patient with a mix of 2-dose and 3-dose series codes will need three doses to count toward the numerator.
- Each immunization must be refused and documented separately. For example, if a patient has an NMI refusal for Rubella only, then there must be an immunization, contraindication, or separate NMI refusal for the Measles and Mumps immunizations.
- For immunizations where required number of doses is >1, only one NMI refusal is necessary to be counted in the numerator. For example, if there is a single NMI refusal for Hepatitis B, the patient will be included in the numerator.
- For immunizations where required number of doses is >1, only one contraindication is necessary to be counted in the numerator. For example, if there is a single contraindication for HiB, the patient will be included in the numerator.
- Evidence of disease will be checked for at any time in the child's life (prior to the end of the report period).
- To be counted in Subnumerator A, a patient must meet the numerator definition AND have evidence of disease, a contraindication, or an NMI refusal for any of the immunizations in the numerator. For example, if a patient was Rubella immune but had a Measles and Mumps immunization, the patient would be included in Subnumerator A.
- For the separate numerator for REF refusal (Patient Refusal for Service) in PCC or a Parent or Patient refusal in the IZ program, all conditions shown below must be met:
 - Each immunization must be refused and documented separately. For example, if a patient has an REF refusal for Rubella, then there also must be an immunization, contraindication, or separate REF refusal for Measles and Mumps.
 - Where the required number of doses is >1, only one REF refusal in PCC or one Parent or Patient refusal in the IZ program is necessary to be counted in the numerator. For example, for the four DTaP numerator, only one refusal is necessary to be counted in the refusal numerator.

2.3.3.6 GPRA 2012 Description

During FY **2012**, achieve the tentative target rate of **77.8%** for the proportion of AI/AN children ages 19–35 months who have received the recommended immunizations.

Note: In FY 2011, the GPRA measure changes to the 4:3:1:3:3:1:4 combination, which includes pneumococcal.

2.3.3.7 Patient List

List of patients 19–35 months with IZ, if any. If a patient did not have all doses in a multiple dose vaccine, the IZ will not be listed. For example, if a patient only had two DTaP, no IZ will be listed for DTaP.

Note: Because age is calculated at the beginning of the report period, the patient's age on the list will be between 7–23 months

2.3.4 Adolescent immunizations

Changes from Version 11.1, as noted.

2.3.4.5 Definitions

Timing of Doses

Because IZ data comes from multiple sources, any IZ codes documented on dates within 10 days of each other will be considered as the same immunization.

Dosage and Types of Immunizations

- One dose of Td or Tdap
- Two doses of MMR
 - Two MMRs
 - Two M/R and two Mumps

- Two R/M and two Measles
- Two each of Measles, Mumps, and Rubella
- Three doses of Hep B *or* two doses *if* documented with CPT 90743
- One dose of Varicella
- One dose of Meningococcal
- Three doses of HPV

Not Medically Indicated Refusal, Contraindication, and Evidence of Disease Information

Not Medically Indicated refusals, evidence of disease, and contraindications for individual immunizations will also count toward meeting the definition, as defined below. Refusals will count toward meeting the definition for refusal numerators only. NOTE: NMI refusals are not counted as refusals; rather, they are counted as contraindications.

- Each immunization must be refused and documented separately. For example, if a patient has an NMI refusal for Rubella only, then there must be an immunization, contraindication, or separate NMI refusal for the Measles and Mumps immunizations.
- For immunizations where required number of doses is >1, only one NMI refusal is necessary to be counted in the numerator. For example, if there is a single NMI refusal for Hepatitis B, the patient will be included in the numerator.
- For immunizations where required number of doses is >1, only one contraindication is necessary to be counted in the numerator. For example, if there is a single contraindication for HiB, the patient will be included in the numerator.
- Evidence of disease will be checked for at any time in the child's life (prior to the end of the report period.)
- To be counted in sub-numerator A, a patient must have evidence of disease, a contraindication, or an NMI refusal for any of the immunizations in the numerator. For example, if a patient was Rubella immune but had a Measles and Mumps immunization, the patient would be included in sub-numerator A.

Refusal Numerator

For the separate numerator for REF refusal (Patient Refusal for Service) in PCC or a Parent or Patient refusal in the IZ program, all conditions shown below must be met:

- Each immunization must be refused and documented separately. For example, if a patient has an REF refusal for Rubella, then there also must be an immunization, contraindication, or separate REF refusal for Measles and Mumps.
- Where the required number of doses is >1, only one REF refusal in PCC or one Parent or Patient refusal in the IZ program is necessary to be counted in the numerator. For example, for the four DTaP numerator, only one refusal is necessary to be counted in the refusal numerator.

ER Visit

Clinic code 30

Injury

Primary or secondary POV 800.0–999.9 or E800.0–E989

Denominator and Numerator Logic

If a patient has multiple ER visits for injury during the report period, each visit will be counted in the denominator. For the screening numerator, each ER visit with injury at which the patient was screened for hazardous alcohol use will be counted. For the positive alcohol use screen numerator, each ER visit with injury at which the patient screened positive for hazardous alcohol use will be counted. For the BNI numerators, each visit where the patient was either provided a BNI at the ER or within seven days of the ER visit will be counted.

An example of this logic is shown in Table 2-1.

Table 2-1: Denominator and Numerator Logic

ER Visit with Injury	Denom Count	Scm Num	Post Scm Num Count	BNI Num Count
John Doe, 07/17/09, Screened Positive at ER, BNI at ER	1	1	1	1
John Doe, 09/01/09, Screened Positive at ER, No BNI	1	1	1	0

ER Visit with Injury	Denom Count	Scm Num	Post Scm Num Count	BNI Num Count
John Doe, 11/15/09, No Screen	1	0	0	0
Counts:	3	2	2	1

Effective Acute Phase Treatment Numerator

For all antidepressant medication prescriptions filled (see list of medications below) within 114 days of the Index Prescription Date, from V Medication CRS counts the days prescribed (i.e., treatment days) from the Index Prescription Date until a total of 84 treatment days has been established. If the patient had a total gap exceeding 30 days or if the patient does not have 84 treatment days within the 114 day timeframe, the patient is not included in the numerator.

Note: If the medication was started and then discontinued, CRS will recalculate the # Days Prescribed by subtracting the prescription date, (i.e., visit date) from the V Medication Discontinued Date. For example: Rx Date=11/15/2011, Discontinued Date=11/19/2011, Recalculated # Days Prescribed=4.

Example of Patient Included in Numerator:

- 1st RX is Index Rx Date: 11/1/2010, # Days Prescribed=30
 - Rx covers patient through 12/1/2010
- 2nd RX: 12/15/2010, # Days Prescribed=30
 - Gap #1 = (12/15/2010–12/1/2010) = 14 days
 - Rx covers patient through 1/14/2011
- 3rd RX: 1/10/2011, # Days Prescribed=30
 - No gap days.
 - Rx covers patient through 2/13/2011
 - Index Rx Date 11/1/2010 + 114 days = 2/23/2011
- Patient's 84th treatment day occurs on 2/7/2011, which is \leq 2/23/2011 and # gap days of 14 is less than 30.

Example of Patient Not Included in Numerator:

- 1st Rx is Index Rx Date: 11/1/2010, # Days Prescribed=30
 - Rx covers patient through 12/1/2010
- 2nd Rx: 12/15/2010, # Days Prescribed=30
 - Gap #1 = (12/15/2010-12/1/2010) = 14 days
 - Rx covers patient through 1/14/2011
- 3rd Rx: 2/01/2011, # Days Prescribed=30
 - Gap #2 = (2/01/2011-1/14/2011) = 18, total # gap days = 32, so patient is not included in the numerator.

Effective Continuation Phase Treatment Numerator

For all antidepressant medication prescriptions (see list of medications above) filled within 231 days of the Index Prescription Date, CRS counts the days prescribed (i.e., treatment days) (from V Medication) from the Index Prescription Date until a total of 180 treatment days has been established. If the patient had a total gap exceeding 51 days or if the patient does not have 180 treatment days within the 231 day timeframe, the patient is not included in the numerator.

Note: If the medication was started and then discontinued, CRS will recalculate the # Days Prescribed by subtracting the prescription date (i.e., visit date) from the V Medication Discontinued Date. For example: Rx Date=11/15/2011, Discontinued Date=11/19/2011, Recalculated # Days Prescribed=4.

 - B. For those with a BMI calculated, patients considered obese using BMI and standard tables.
 - C. Total of overweight and obese.
2. Patients with documented refusal in past year.

2.7.1.5 Definitions

BMI

CRS calculates BMI at the time the report is run, using NHANES II. For 18 and under, a height and weight must be taken on the same day any time during the report period. For 19 through 50, height and weight must be recorded within last five years, not required to be on the same day. For over 50, height and weight within last two years, not required to be recorded on same day. Overweight but not obese is defined as BMI of 25 through 29 for adults 19 and older. Obese is defined as BMI of 30 or more for adults 19 and older. For ages 2–18, definitions are based on standard tables.

Patients whose BMI either is greater or less than the Data Check Limit range shown in the BMI Standard Reference Data Table in PCC will not be included in the report counts for Overweight or Obese.

Refusals

Include REF (refused), NMI, and UAS (unable to screen) and must be documented during the past year. For ages 18 and under, both the height and weight must be refused on the same visit at any time during the past year. For ages 19 and older, the height and weight must be refused during the past year and are not required to be on the same visit.

3. Patients with a BMI at or above the 85th percentile.

2.7.2.5 Definitions**Age**

All patients for whom a BMI could be calculated and who are between the ages of two and five at the beginning of the report period and who do not turn age six during the report period are included in this measure. Age in the age groups is calculated based on the date of the most current BMI found. For example, a patient may be two at the beginning of the time period but is three at the time of the most current BMI found. That patient will fall into the Age 3 group.

BMI

CRS looks for the most recent BMI in the report period. CRS calculates BMI at the time the report is run, using NHANES II. A height and weight must be taken on the same day any time during the report period. The BMI values for this measure reported differently than in Obesity Assessment since this age group is children ages two to five, whose BMI values are age-dependent. The BMI values are categorized as Overweight for patients with a BMI in the 85th to 94th percentile and Obese for patients with a BMI at or above the 95th percentile.

A patient whose BMI either is greater or less than the Data Check Limit range shown below will not be included in the report counts for Overweight or Obese.

Table 2-2: Data Check Limit

BMI

CRS calculates BMI at the time the report is run, using NHANES II. For 18 and under, a height and weight must be taken on the same day any time during the report period. For 19 through 50, height and weight must be recorded within last five years, not required to be on the same day. For over 50, height and weight within last two years, not required to be recorded on same day.

BP Documented

CRS uses mean of last three BPs documented on non-ER visits in the past two years. If three BPs are not available, uses mean of last two non-ER BPs. If a visit contains more than one BP, the lowest BP will be used, defined as having the lowest systolic value. The mean Systolic value is calculated by adding the last three (or two) systolic values and dividing by three (or two). The mean Diastolic value is calculated by adding the diastolic values from the last three (or two) blood pressures and dividing by three (or two). If the systolic and diastolic values do not *both* meet the current category, then the value that is least controlled determines the category.

If CRS is not able to calculate a mean BP, it will search for CPT 0001F, 2000F, 3074F–3080F *or* **POV V81.1** documented on a non-ER visit during the Report Period.

AMI

POV 410.*1 (i.e., first eligible episode of an AMI) with Service Category H. If patient has more than one episode of AMI during the first 51 weeks of the report period, CRS will include only the first discharge.

Denominator Exclusions

Patients meeting any of the following conditions will be excluded from the denominator.

- Patients with Discharge Type of Irregular (AMA), Transferred, or contains "Death."
- Patients readmitted for any diagnosis within seven days of discharge.
- Patients with a Diagnosis Modifier of C (Consider), D (Doubtful), M (Maybe, Possible, Perhaps), O (Rule Out), P (Probable), R (Resolved), S (Suspect, Suspicious), or T (Status Post).
- Patients with a Provider Narrative beginning with "Consider," "Doubtful," "Maybe," "Possible," "Perhaps," "Rule Out," "R/O," "Probable," "Resolved," "Suspect," "Suspicious," or "Status Post."

To be included in the numerators,

A patient must meet one of the three conditions below:

- An active prescription (not discontinued as of [discharge date + seven days] and does not have a comment of RETURNED TO STOCK) that was prescribed prior to admission, during the inpatient stay, or within seven days after discharge. "Active" prescription defined as: Days Prescribed > ((Discharge Date + seven days)–Order Date); *or*

- A refusal of the medication at least once during hospital stay through seven days after discharge date; *or*
- Have a contraindication/previous adverse reaction to the indicated medication.

Refusals and contraindications/previous adverse drug reactions (ADR)/allergies are only counted if a patient did not have a prescription for the indicated medication. Patients without a prescription who have a contraindication/ADR/allergy and/or refusal will be counted in sub-numerators B and/or the refusal numerator. Because a patient may have both a refusal and a contraindication/ADR/allergy, the subnumerator totals of A-B and the refusal numerator may not add up to the numerator total.

Note: If the medication was started and then discontinued, CRS will recalculate the # Days Prescribed by subtracting the prescription date (i.e. visit date) from the V Medication Discontinued Date. Example: Rx Date=11/15/2011, Discontinued Date=11/19/2011, Recalculated # Days Prescribed=4.

2.7.11.5 Definitions

AMI

POV or Problem List 410.0*–410.9* or 412. AMI diagnosis may be made at an inpatient or outpatient visit but must occur between six months prior to beginning of report period through first six months of the report period. Inpatient visit defined as Service Category of H (Hospitalization). If patient has more than one episode of AMI during the timeframe, CRS will include only the first hospital discharge or ambulatory visit.

Denominator Exclusions

Patients meeting any of the following conditions will be excluded from the denominator.

- If inpatient visit, patients with Discharge Type of Irregular (AMA), Transferred, or contains “Death.”
- Patients with a Diagnosis Modifier of C (Consider), D (Doubtful), M (Maybe, Possible, Perhaps), O (Rule Out), P (Probable), R (Resolved), S (Suspect, Suspicious), or T (Status Post).
- Patients with a Provider Narrative beginning with “Consider,” “Doubtful,” “Maybe,” “Possible,” “Perhaps,” “Rule Out,” “R/O,” “Probable,” “Resolved,” “Suspect,” “Suspicious,” or “Status Post.”

To Be Included in the Numerators

A patient must meet one of the three conditions below:

- A total days’ supply \geq 135 days in the 180 days following discharge date for inpatient visits or visit date for ambulatory visits. Medications must not have a comment of RETURNED TO STOCK. Prior active prescriptions can be included if the treatment days fall within the 180 days following discharge/visit date. Prior active prescription defined as most recent prescription (see codes below) prior to admission/visit date with the number of days supply equal to or greater than the discharge/visit date minus the prescription date
- A refusal of the medication at least once at time of diagnosis through the 180 days after AMI
- Have a contraindication/previous adverse reaction to the indicated medication. Refusals and contraindications/previous adverse drug reactions (ADR)/allergies are only counted if a patient did not have a prescription for the indicated medication. Patients without a prescription who have a contraindication/ADR/allergy and/or refusal will be counted in sub-numerators B and/or the refusal numerator. Because a patient may have both a refusal and a contraindication/ADR/allergy, the subnumerator totals of A-B and the refusal numerator may not add up to the numerator total.

Note: If the medication was started and then discontinued, CRS will recalculate the # Days Prescribed by subtracting the prescription date (i.e., visit date) from the V Medication Discontinued Date. For example: Rx Date=11/15/2011, Discontinued Date=11/19/2011, Recalculated # Days Prescribed=4.

Example of patient included in the beta-blocker numerator who has prior active prescription:

- Admission Date: 2/1/2011, Discharge Date: 2/15/2011

- Must have 135 days prescribed by 8/13/2011 (Discharge Date+180)
- Prior Beta-Blocker Rx Date: 1/15/2011
- # Days Prescribed: 60 (treats patient through 3/15/2011)
- Discharge Date minus Rx Date: 2/15/2011–1/15/2011 = 31, 60 is \geq 31, prescription is considered Prior Active Rx
- 3/15/2011 is between 2/15 and 8/13/2011, thus remainder of Prior Active Rx can be counted toward 180-day treatment period
- # Remaining Days Prescribed from Prior Active Rx:
(60-(Discharge Date-Prior Rx Date) = 60-(2/15/2011–1/15/2011) = 60-31 = 29
- Rx #2: 4/1/2011, # Days Prescribed: 90
- Rx #3: 7/10/2011, #Days Prescribed: 90
- Total Days Supply Prescribed between 2/15 and 8/13/2011: 29+90+90=209

2.7.12.5 Definitions

IHD

- POV 410.0–412.*, 414.0–414.9, or 429.2

Diabetes

Diagnosed with diabetes (first POV in V POV with 250.00–250.93) prior to the current report period, *and* at least two visits during the current report period, *and* two DM-related visits ever. Patients not meeting these criteria are considered non-diabetics.

To be included in the numerators:

A patient must meet one of the three conditions below:

- Prescription(s) for the indicated medication with a total days supply of 180 days or more during the Report Period. Medications must not have a comment of RETURNED TO STOCK.
- A refusal of the medication during the report period
- Have a contraindication/previous adverse reaction to the indicated medication. Refusals and contraindications/previous adverse drug reactions (ADR)/allergies are only counted if a patient did not have a prescription for the indicated medication. Patients without a prescription who have a contraindication/ADR/allergy and/or refusal will be counted in sub-numerators B and/or the refusal numerator. Because a patient may have both a refusal and a contraindication/ADR/allergy, the subnumerator totals of A-B and the refusal numerator may not add up to the numerator total.

For prescriptions, the days supply requirement may be met with a single prescription or from a combination of prescriptions for the indicated medication that were filled during the report period and prescriptions filled prior to the report period but which are still active (i.e., prior active prescription). Prior active prescriptions can be included if the treatment days fall within the report period. Prior active prescription defined as most recent prescription for the indicated medication (see codes below) prior to report period start date with the number of days supply equal to or greater than the report period start date minus the prescription date.

Note: If a prescription for a medication was started and then discontinued, CRS will recalculate the # Days Prescribed by subtracting the prescription date (i.e., visit date) from the V Medication Discontinued Date. For example: Rx Date=11/15/2011, Discontinued Date=11/19/2011, Recalculated # Days Prescribed=4.

Example of patient included in the beta-blocker numerator with prior active prescription:

- Report period: 07/01/2010–06/30/2011
- Must have 180 days supply of indicated medication 6/30/2011 (end of report period)
- Prior Beta-Blocker Rx Date: 06/01/2010
- # Days Prescribed: 60 (treats patient through 07/31/2010)
- Report Period Start Date minus Rx Date: 07/01/2010-06/01/2010 = 30; 60 (#Days Prescribed) is \geq 30, prescription is considered Prior Active Rx
- 07/31/2010 is between the report period of 07/01/2010 and 06/30/2011, thus remainder of Prior Active Rx can be counted toward 180-days supply
- # Remaining Days Prescribed from Prior Active Rx:
(# Days Prescribed-(Report Period Start Date-Prior Rx Date) = 60-(07/01/2010-06/01/2010) = 60-30 = 30
- Rx #2: 08/05/2010, # Days Prescribed: 90
- Rx #3: 11/10/2010, #Days Prescribed: 90
- Total Days Supply Prescribed between 07/01/2010 and 06/30/2011, including prior active prescription: 30+90+90=210

2.8.4.5 Definitions

Key STIs

Chlamydia, gonorrhea, HIV/AIDS, and syphilis. Key STIs defined with the following POVs:

- Chlamydia: ~~078.8*~~, 079.88, 079.98, 099.41, 099.50–099.59
- Gonorrhea: 098.0–098.89
- HIV/AIDS: 042, 042.0–044.9, 079.53, 795.71, V08
- Syphilis: 090.0–093.9, 094.1–097.9

Logic for Identifying Patients Diagnosed with Key STI (Numerator #1)

Any patient with one or more diagnoses of any of the key STIs defined above during the period 60 days prior to the beginning of the report period through the first 300 days of the report period.

Logic for Identifying Separate Incidents of Key STIs (Numerator #2)

One patient may have one or multiple occurrences of one or multiple STIs during the year, *except for HIV. An occurrence of HIV is only counted if it is the initial HIV diagnosis for the patient ever.* Incidents of an STI are identified beginning with the date of the first key STI diagnosis (see definition above) occurring between 60 days prior to the beginning of the report period through the first 300 days of the report period. A second incident of the same STI (*other than HIV*) is counted if another diagnosis with the same STI occurs two months or more after the initial diagnosis. A different STI diagnosis that occurs during the same 60-day time period as the first STI counts as a separate incident.

Table 2-3: Logic for Identifying Separate Incidents of Key STIs

Date	Visit	Total Incidents
08/01/10	Patient screened for Chlamydia	0
08/08/10	Patient diagnosed with Chlamydia	1
10/15/10	Patient diagnosed with Chlamydia	2
10/25/10	Follow-up for Chlamydia	2
11/15/10	Patient diagnosed with Chlamydia	2
03/01/11	Patient diagnosed with Chlamydia	3

Denominator Logic for Needed Screenings (Denominator #1)

One patient may need multiple screening tests based on one or more STI incidents occurring during the time period.

To be included in the needed screening tests denominator, the count will be derived from the number of separate STI incidents and the type(s) of screenings recommended for each incident. The recommended screenings for each key STI are listed in the following table.

Table 2-4: Recommended Screenings for each Key STI

STI	Screenings Needed
Chlamydia	Gonorrhea, HIV/AIDS, Syphilis
Gonorrhea	Chlamydia, HIV/AIDS, Syphilis
HIV/AIDS	Chlamydia, Gonorrhea, Syphilis
Syphilis	Chlamydia, Gonorrhea, HIV/AIDS

“Needed” screenings are recommended screenings that are further evaluated for contraindications. The following are reasons that a recommended screening is identified as not needed (i.e., contraindicated).

- The patient has a documented STI diagnosis corresponding to the screening type in the same time period. For example, a patient with both a Chlamydia and a gonorrhea diagnosis on the same visit does not need the recommended Chlamydia screening based on the gonorrhea diagnosis.
- Only one screening for each type of STI is needed during the relevant time period, regardless of the number of different STI incidents identified. For example, if a patient is diagnosed with Chlamydia and Gonorrhea on the same visit, only one screening each is needed for HIV/AIDS and Syphilis.
- A patient with HIV/AIDS diagnosis prior to any STI diagnosis that triggers a recommended HIV/AIDS screening does not need the screening ever.

Numerator Logic

To be counted in the numerator, each needed screening in the denominator must have a corresponding lab test or test refusal documented in the period from one month prior to the relevant STI diagnosis date through two months after the STI incident.

- 12/08/10: Patient diagnosed with Chlamydia (Incident #2– two screens
needed: Gonorrhea and Syphilis)
- 12/10/10: Patient screened for Syphilis

2.9.1.5 Definitions

Fracture

Does not include fractures of finger, toe, face, or skull. CRS will search for the first (i.e., earliest) fracture during the period six months (180) days prior to the beginning of the report period and the first six months of the report period. If multiple fractures are present, only the first fracture will be used.

The Index Episode Start Date is the date the fracture was diagnosed. If the fracture was diagnosed at an outpatient visit (Service Category A, S, or O), the Index Episode Start Date is equal to the Visit Date. If diagnosed at an inpatient visit (Service Category H), the Index Episode Start Date is equal to the Discharge Date.

Denominator Exclusions

- Patients receiving osteoporosis screening or treatment in the year (365 days) prior to the Index Episode Start Date. Osteoporosis screening or treatment is defined as a Bone Mineral Density (BMD) test (see below for codes) or receiving any osteoporosis therapy medication (see below for codes).
- Patients with a fracture diagnosed at an outpatient visit, which *also* had a fracture within 60 days prior to the Index Episode Start Date.
- Patients with a fracture diagnosed at an inpatient visit, which *also* had a fracture within 60 days prior to the ADMISSION DATE.

Osteoporosis Treatment and Testing

For fractures diagnosed at an outpatient visit:

- A nondiscontinued prescription within six months (180 days) of the Index Episode Start Date (i.e., visit date) or

Maintenance Therapy Medications and Monitoring

For all maintenance therapy medications *except* intramuscular gold, each medication must be prescribed within the past 465 days of the end of the report period (i.e., the Medication Period) and the sum of the days supply ≥ 348 . This means the patient must have been on the medication at least 75% of the medication period. The following two examples illustrate this logic. All medications must not have a comment of RETURNED TO STOCK.

- **Example of Patient Not on Chronic Medication (not included in Denominator)**

Report period: Jan 1–Dec 31, 2011

- Medication Period: 465 days from end of report period (Dec 31, 2011):
Sep 22, 2010–Dec 31, 2011

Medication Prescribed:

- Diclofenac: 1st Rx: Oct 15, 2010, Days Supply=90; 2nd Rx: Jan 1, 2011: Days Supply=90; 3rd Rx: Mar 15, 2011: Days Supply=90.
- Total Days Supply=270. 270 is not >348 . Patient is not considered on chronic medication and is not included in the denominator.

- **Example of Patient on Chronic Medication (included in Denominator):**

Report period: Jan 1–Dec 31, 2011

- Medication Period: 465 days from end of report period (Dec 31, 2011):
Sep 22, 2010–Dec 31, 2011

Medication Prescribed:

- Sulfasalazine: 1st Rx: Sep 30, 2010, Days Supply=90; 2nd Rx: Dec 30, 2010, Days Supply=90; 3rd Rx: Mar 15, 2011:
Days Supply=180.

Total Days Supply=360. 360 is >348 . Patient is considered on chronic medication and is included in denominator.

The days supply requirement may be met with a single prescription or from a combination of prescriptions for the same medication that were filled during the medication period. However, for all medications, there must be at least one prescription filled during the Report period.

Note: If the medication was started and then discontinued, CRS will recalculate the # Days Prescribed by subtracting the prescription date (i.e., visit date) from the V Medication Discontinued Date. For example: Rx Date=11/15/2011, Discontinued Date=11/19/2011, Recalculated # Days Prescribed=4.

For intramuscular gold, the patient must have 12 or more injections during the report period.

Appropriate Monitoring of Rheumatoid Arthritis Medications

Appropriate monitoring is defined with laboratory tests and varies by medication, as shown in the table below. If patient is prescribed two or more types of medications, patient must meet criteria for all of the medications.

Maintenance Therapy Medications

Medications shown in table below *except* for Gold, Intramuscular, all medications requiring more than one of each type of test during the report period, there must be a minimum of 10 days between tests. For example, if a Sulfasalazine test was performed on March 1, March 7, and March 21, 2011, the March 7 test will not be counted since it was performed only six days after the March 1 test.

Table 2-5: Maintenance Therapy Medications

Medication	Required Monitoring Test(s) and Frequency
Gold, Intramuscular	CBC and Urine Protein on same day as each injection during report period.
Azathioprine or Sulfasalazine	four CBCs during the report period.
Leflunomide or Methotrexate	6 each of CBC, Serum Creatinine, and Liver Function Test during the report period.
Cyclosporin	CBC, Liver Function Tests, and Potassium within past 180 days from report period end date. 12 Serum Creatinine tests during the report period
Gold, Oral or Penicillamine	four each of CBC and Urine Protein during the report period.
Mycophenolate	CBC within past 180 days from report period end date.

- 1. Active Clinical patients ages one or older with persistent asthma or who have had two asthma-related visits during the report period. Broken down into age groups: 1-4, 5-19, 20-44, 45-64, and 65+.*

~~2.9.8.4 Numerators~~

- 1. Patients prescribed an inhaled corticosteroid during the report period.*

~~2.9.8.5 Definitions~~

Age

Age of the patient is calculated at the beginning of the report period

Denominator Exclusion

Patients with intermittent asthma defined as any of the following:

- An Active entry in PCC Problem List for 493.* with a Severity of 1 at any time before the end of the report period, or*
- Most recent visit-related asthma entry (i.e. V Asthma) with Severity of 1 documented any time before the end of the report period.*

Asthma

- ~~CRS will first search to see if the patient has persistent asthma, which is defined as any of the following:

 - ~~An Active entry in PCC Problem List for 493.* with a Severity of 2, 3, or 4 at any time before the end of the report period or~~
 - ~~Most recent visit-related asthma entry (i.e., V Asthma) with Severity of 2, 3, or 4 documented any time before the end of the report period.~~~~
- ~~If the patient does not meet any of the above criteria, then CRS will search for two asthma-related visits during the report period. Asthma-related visit defined as any primary or secondary POV of asthma 493.*.~~

Note: For facilities not using asthma staging (severity assessment) in the PCC Problem List, CRS will rely on visit criteria for this assessment. This will result in patients with intermittent asthma being included in the denominator. The Expert Guideline driven method for managing patients with asthma is by staging them in the PCC Problem List. Doing so will improve the accuracy of the information reported by CRS.

Inhaled Corticosteroid

~~To be included in the numerator, patient must have a non-discontinued prescription for an inhaled corticosteroid during the report period. Inhaled corticosteroid medications defined with medication taxonomy BGP ASTHMA INHALED STEROIDS.~~

Dispensing Event

One prescription of an amount lasting 30 days or less. For RXs longer than 30 days, divide the days' supply by 30 and round down to convert. For example, a 100-day RX is equal to three dispensing events ($100/30 = 3.33$, rounded down to 3). Also, two different RXs dispensed on the same day are counted as two different dispensing events. Inhalers should also be counted as one dispensing event.

Note: *If the medication was started and then discontinued, CRS will recalculate the # Days Prescribed by subtracting the prescription date (i.e., visit date) from the V Medication Discontinued Date. For example: Rx Date=11/15/2011, Discontinued Date=11/19/2011, Recalculated # Days Prescribed=4.*

2.9.10 Community-Acquired Pneumonia Assessment of Oxygen Saturation

2.9.10.2 Denominators

1. Number of visits for User Population patients ages 18 and older diagnosed with community-acquired bacterial pneumonia at an outpatient visit during the report period.

2.9.10.3 Numerators

1. Number of visits where patients had oxygen saturation documented and reviewed.
2. Number of visits where patients refused oxygen saturation assessment.
3. Number of visits where patients did not have their oxygen saturation documented and reviewed.

2.9.10.4 Definition

Age

Age of the patient is calculated at the beginning of the report period.

Community-Acquired Bacterial Pneumonia

- Non-CHS outpatient visit (defined as (visit) Type not equal to "C" and Service Category of A (Ambulatory), S (Day Surgery), O (Observation)) with POV 481, 482.0, 482.1, 482.2, 482.30, 482.31, 482.32, 482.39, 482.40, 482.41, 482.42, 482.49, 482.81, 482.82, 482.83, 482.84, 482.89, 482.9, 483.0, 483.1, 483.8, 485, 486, 487.0. 482.42
- If a patient has more than one visit for community-acquired bacterial pneumonia during the report period, each visit will be counted as long as it has been more than 45 days since the date of the prior visit. For example, a patient was diagnosed on January 1, 2008 and 35 days later he was diagnosed again with pneumonia. That second diagnosis does not count as a separate visit. However, if the patient were diagnosed again on February 16, 2008 (46 days after onset), that diagnosis counts as a separate visit. Because RPMS does not store the date of onset, visit date will be used as a surrogate for onset date.

Oxygen Saturation Assessment

- Having any of the following arterial blood gas (ABG) or pulse oximetry tests performed at the visit:
 - V Measurement O2 Saturation
 - CPT 94760–94762, 82803, 82805, 82810, or 3028F, where 3028F has no modifier of 1P, 2P, 3P, or 8P

- Laboratory test ABG
- Site-populated lab taxonomy BGP CMS ABG TESTS
- LOINC taxonomy

Refusal of Oxygen Saturation Assessment

CRS calculates BMI at the time the report is run, using NHANES II. For 18 and under, a height and weight must be taken on the same day any time during the Report Period. For 19 through 50, height and weight must be recorded within last five years, not required to be on the same day. For over 50, height and weight within last two years not required to be recorded on same day.

- LOINC taxonomy
- Site-populated taxonomy DM AUDIT LDL CHOLESTEROL TAX

BP

CRS uses mean of last three BPs documented on non-ER visits during the Report Period. If three BPs are not available, use mean of the last two non-ER BPs. If a visit contains more than one BP, the lowest BP will be used, defined as having the lowest systolic value. The mean Systolic value is calculated by adding the last three (or two) systolic values and dividing by three (or two). The mean Diastolic value is calculated by adding the diastolic values from the last three (or two) blood pressures and dividing by three (or two).

- For the BP documented numerator, if CRS is not able to calculate a mean BP, it will search for CPT 0001F, 2000F, 3074F–3080F *or* **POV V81.1** documented on a non-ER visit during the report period.

2. Patients with a gap in medication therapy ≥ 30 days.
3. For use with denominator #8: Patients with proportion of days covered (PDC) $\geq 90\%$ during the Report Period.

2.9.13.5 Definitions

Denominator Inclusion

Patients must have at least two prescriptions for that particular type of medication on two unique dates of service at any time during the Report Period. Medications must not have a comment of RETURNED TO STOCK.

Index Prescription Start Date

The date when the medication was first dispensed within the Report Period. This date must be greater than 90 days from the end of the Report Period to be counted in the denominator.

Medications

Medications are defined with the following taxonomies: BGP PQA BETA BLOCKER MEDS, BGP PQA ACEI ARB MEDS, BGP PQA CCB MEDS, BGP PQA BIGUANIDE MEDS, BGP PQA SULFONYLUREA MEDS, BGP PQA THIAZOLIDINEDIONE MEDS, BGP PQA STATIN MEDS, BGP PQA ANTIRETROVIRAL MEDS.

Each PDC Numerator

Proportion of days covered = # of days the patient was covered by at least one drug in the class / # of days in the patient's measurement period.

The patient's measurement period is defined as the number of days between the Index Prescription Start Date and the end of the Report Period. When calculating the number of days the patient was covered by at least one drug in the class, if prescriptions for the same drug overlap, the prescription start date for the second prescription will be adjusted to be the day after the previous fill has ended.

Note: If the medication was started and then discontinued, CRS will recalculate the # Days Prescribed by subtracting the prescription date (i.e. visit date) from the V Medication Discontinued Date. Example: Rx Date=11/15/2011, Discontinued Date=11/19/2011, Recalculated # Days Prescribed=4.

Example of Proportion of Days Covered

Report Period: Jan 1 - Dec 31, 2011

- 1st Rx is Index Rx Start Date: 3/1/11, Days Supply=90
 - Rx covers patient through 5/29/11
- 2nd Rx: 5/26/11, Days Supply=90
 - Rx covers patient through 8/27/11
- 3rd Rx: 9/11/11, Days Supply=180; Gap = (9/11/11 - 8/27/11) = 15 days
 - Rx covers patient through 3/8/12

Patient's measurement period: 3/1/11 through 12/31/11 = 306 Days

Days patient was covered: 3/1/11 through 8/27/11 + 9/11/11 through 12/31/11 = 292 Days

$PDC = 292 / 306 = 95\%$

Each Gap Numerator

CRS will calculate whether a gap in medication therapy of 30 or more days has occurred between each consecutive medication dispensing event during the Report Period. A gap is calculated as the days not covered by the days supply between consecutive medication fills.

Example of Medication Gap ≥ 30 Days:

Report Period: Jan 1 - Dec 31, 2011

- 1st Rx: 4/1/11, Days Supply=30
 - Rx covers patient through 4/30/11
- 2nd Rx: 7/1/11, Days Supply=90
 - Gap #1 = (7/1/11 - 4/30/11) = 61 days
 - Rx covers patient through 9/28/11
- 3rd Rx: 10/1/11, Days Supply=90
 - Gap #2 = (10/1/11 - 9/28/11) = two days
 - Rx covers patient through 12/29/11

Gap #1 ≥ 30 days, therefore patient will be included in the numerator for that medication.

2.9.18.5 Definitions

Infant Feeding Choice

The documented feeding choice from the file V Infant Feeding Choice that is closest to the exact age that is being assessed will be used. For example, if a patient was assessed at 45 days old as 1/2 breastfed and 1/2 formula and assessed again at 65 days old as mostly breastfed, the mostly breastfed value will be used since it is closer to the exact age of two months (i.e. 60 days). Another example is a patient who was assessed at 67 days as mostly breastfed and again at 80 days as mostly formula. In this case, the 67 days value of mostly breastfed will be used. The other exact ages are 180 days for six months, 270 days for nine months, and 365 days for one year.

In order to be included in the age-specific screening numerators, the patient must have been screened at the specific age range. For example, if a patient was screened at six months and was exclusively breastfeeding but was not screened at two months, then the patient will only be counted in the six months numerator.

2.9.18.6 2011 Performance Description

During FY 2011, achieve the target rate of 28.6% for the proportion of 2-month olds who are mostly or exclusively breastfeeding.
