Diabetes

First DM POV ICD-9: 250.00 through 250.93 or ICD-10: E10.* through E13.* recorded in the V POV file prior to the report period.

A1c

Searches for most recent A1c test with a result during the report period. If more than one A1c test is found on the same day or the same visit and one test has a result and the other does not, the test with the result will be used. If both tests have a result, the last test done on the visit will be used.

If an A1c test with a result is not found, CRS searches for the most recent A1c test without a result.

- A1c defined as any of the following:
  - Current Procedural Terminology (CPT) 83036, 83037, 3044F to 3046F, 3047F (old code)
  - Logical Observations Identifiers, Names, Codes (LOINC) taxonomy
  - Site-populated taxonomy DM AUDIT HGB A1C TAX
- CPT 3044F represents A1c less than (<) 7 and will be included in the A1c less than (<) 8 numerator.
2.1.2.6 GPRA 2015 Target

**Good Glycemic Control:** During FY 2015, achieve the target rate of 47.7% for the proportion of patients with diagnosed diabetes who have good glycemic control (defined as A1c less than (≤) 8).

2.1.2.7 Patient Lists

- List of diabetic patients with a documented A1c.
- List of diabetic patients without a documented A1c.
- List of diabetic patients with poor glycemic control (A1c greater than (> 9.5).
- List of diabetic patients with A1c equal to or greater than (≥) 7 and less than (<) 8.
- List of diabetic patients with good glycemic control (A1c less than (<) 8).

2.1.3 Diabetes: Blood Pressure Control

2.1.3.1 Owner and Contact

Diabetes Program: Dr. Ann Bullock

2.1.3.2 National Reporting

NATIONAL (included in IHS Performance Report; reported to OMB and Congress)

2.1.3.3 Denominators

1. GPRA: Active Diabetic patients; defined as all Active Clinical patients diagnosed with diabetes prior to the report period, and at least two visits in the past year, and two DM-related visits ever. The key denominator for this and all diabetes-related topics follows.

2.1.3.4 Numerators

1. Patients with BP documented during the report period.

2. GPRA: Patients with BP less than (<) 140/90, i.e., the mean systolic value is less than (<) 140 and the mean diastolic value is less than (<) 90.
2.1.3.5 Definitions

Diabetes
First DM POV ICD-9: 250.00 through 250.93 or ICD-10: E10.* through E13.* recorded in the V POV file prior to the report period.

Exclusions
When calculating all BPs (using vital measurements or CPT codes), the following visits will be excluded:

- Service Category H (Hospitalization), I (In Hospital), S (Day Surgery), or O (Observation)
- Clinic code 23 (Surgical), 30 (ER), 44 (Day Surgery), C1 (Neurosurgery), or D4 (Anesthesiology)

BP Documented
CRS uses mean of last three BPs documented during the report period. If 3 BPs are not available, uses mean of last 2 BPs. If a visit contains more than one BP, the lowest BP will be used, defined as having the lowest systolic value. The mean Systolic value is calculated by adding the last 3 (or 2) systolic values and dividing by 3 (or 2). The mean Diastolic value is calculated by adding the diastolic values from the last 3 (or 2) BPs and dividing by 3 (or 2). If the systolic and diastolic values do not both meet the criteria for controlled, then the value is considered not controlled.

If CRS is not able to calculate a mean BP, it will search for CPT 0001F, 2000F, 3074F through 3080F, G9273, G9274 or POV ICD-9: V81.1 documented during the Report Period.

Controlled BP
CRS uses a mean, as described above where BP is less than (<) 140/90. If the mean systolic and diastolic values do not both meet the criteria for controlled, then the value is considered not controlled.

BP documented and Controlled BP
If CRS is not able to calculate a mean BP from BP measurements, it will search for the most recent of any of the following codes documented during the report period:

- BP Documented: CPT 0001F, 2000F, G9273, G9274 or POV ICD-9: V81.1; OR
• Systolic: CPT 3074F, 3075F, or 3077F WITH Diastolic: CPT 3078F, 3079F, or 3080F. The systolic and diastolic values do not have to be recorded on the same day. If there are multiple values on the same day, the CPT indicating the lowest value will be used.

• The following combinations represent BP less than (<) 140/90 and will be included in the Controlled BP numerator: CPT 3074F or 3075F and 3078F or 3079F, OR G9273. All other combinations will not be included in the Controlled BP numerator.

2.1.3.6 GPRA 2015 Target
During FY 2015, achieve the target rate of 63.8% for the proportion of patients with diagnosed diabetes who have achieved BP control (defined as less than (<) 140/90).

2.1.3.7 Patient Lists
• List of diabetic patients who had their BP assessed.
• List of diabetic patients who did not have their BP assessed.
• List of diabetic patients with controlled BP, defined as below 140/90.
• List of diabetic patients with uncontrolled BP, defined as above 140/90.

2.1.4 Diabetes: LDL Assessment

2.1.4.1 Owner and Contact

2.1.4.3 Denominators
1. GPRA: Active Diabetic patients; defined as all Active Clinical patients diagnosed with diabetes prior to the report period, and at least two visits in the past year, and two DM-related visits ever. The key denominator for this and all diabetes-related topics is below.

2.1.4.4 Numerators

2. LDL less than (<) 100

**2.1.4.5 Definitions**

**Diabetes**
First DM POV ICD-9: 250.00 through 250.93 or ICD-10: E10.* through E13.* recorded in the V POV file prior to the report period.

**LDL**
Searches for most recent LDL test with a result during the report period. If more than one LDL test is found on the same day or the same visit and one test has a result and the other does not, the test with the result will be used. If an LDL test with a result is not found, CRS searches for the most recent LDL test without a result.

Patient Age
Since the age of the patient is calculated at the beginning of the report period, the age range will be adjusted to 7 through 23 months at the beginning of the report period, which makes the patient between the ages of 19 through 35 months at the end of the report period.

Timing of Doses
Because IZ data comes from multiple sources, any IZ codes documented on dates within 10 days of each other will be considered as the same immunization.

- 1 dose of Varicella
- 4 doses of Pneumococcal

NMI refusals, Contraindication, and Evidence of Disease Information

NMI refusals, evidence of disease, and contraindications for individual immunizations will also count toward meeting the definition, as defined below.

**Note:** NMI refusals are *not* counted as refusals; rather, they are counted as contraindications.
• For immunizations that allow a different number of doses (e.g., 3 or 4 HIB):
  To count toward the numerator with the smaller number of doses, all of the
  patient's vaccinations must be part of the smaller dose series. For example, for
  a patient to count toward the HIB numerator with only 3 doses, all 3 doses
  must be included in the 3-dose series codes listed in the HIB definition. A
  patient with a mix of 3-dose and 4-dose series codes will need 4 doses to
  count toward the numerator. An exception to this is for the HIB vaccine: if the
  first 2 doses are CVX code 49, then the patient only needs 3 doses (even if the
  third dose is included in the 4-dose series).

• Each immunization must be refused and documented separately. For example,
  if a patient has an NMI refusal for Rubella only, then there must be an
  immunization, contraindication, or separate NMI refusal for the Measles and
  Mumps immunizations.

• For immunizations where required number of doses is greater than one, only
  one NMI refusal is necessary to be counted in the numerator. For example, if
  there is a single NMI refusal for Hepatitis B, the patient will be included in the
  numerator.

• To be counted as evidence of disease or contraindication or NMI refusal, a
  patient must have evidence of disease, a contraindication, or an NMI refusal
  for any of the immunizations in the numerator. For example, if a patient was
  Rubella immune but had a Measles and Mumps immunization, the patient
  would be counted as having evidence of disease for MMR.

• For immunizations where required number of doses is greater than one, only
  one contraindication is necessary to be counted in the numerator. For
  example, if there is a single contraindication for HiB, the patient will be
  included in the numerator.

• Evidence of disease will be checked for at any time in the child's life (prior to
  the end of the report period.).

2. Patients identified as having quit their tobacco use anytime during the Report Period.

3. GPRA: Patients who received tobacco cessation counseling, received a prescription for a tobacco cessation aid, or quit their tobacco use anytime during the Report Period.

2.4.5.5 **Definitions**

**Denominator**

Current Tobacco Users or Tobacco Users in Cessation:

CRS will search first for all health factors documented in the Tobacco, TOBACCO (SMOKING) and TOBACCO (SMOKELESS – CHEWING/DIP) categories during the Report Period.

If health factor(s) are found and at least one of them is one of the health factors listed below, the patient is counted as a current tobacco user or tobacco user in cessation. The patient is not counted as receiving cessation counseling.

Tobacco User Health Factors (TUHFs):
- Cessation-Smoker
- Cessation-Smokeless
- Current Smoker
- Current Smokeless
- Current Smoker and Smokeless
- Current Smoker, status unknown
- Current Smoker, every day
- Current Smoker, some day
- Heavy Tobacco Smoker
- Light Tobacco Smoker

If a health factor is found and it is not a TUHF, CRS will then search for CPT 1034F or 1035F documented after the health factor. If one of these codes is found, the patient will be considered a tobacco user.
If no health factor was found, CRS will then search for any of the following codes documented during the Report Period:

- Tobacco-related diagnoses (POV or Problem List entry where the status is not Inactive or Deleted) ICD-9: 305.1, 305.10 through 305.12 (old codes), 649.00 through 649.04; ICD-10: F17.2*0, F17.2*3, F17.2*8, F17.2*9, O99.33*
- CPT 99406, 99407, G0375 (old code), G0376 (old code), 1034F, 1035F, G8455 (old code), G8456 (old code), G8402 (old code), G8453 (old code), G9276

If any of these codes are found, the patient will be considered a tobacco user.

If no health factor or other tobacco user-defining code listed above was found during the specified timeframe, CRS will then search for the most recent health factor documented during an expanded timeframe of any time prior to the report period. For example, a patient with the most recent health factor being documented 5 years prior to the report period.

**Note:** If multiple health factors were documented on the same date and if any of them are TUHF(s), all of the health factors will be considered as TUHF(s).

If a health factor is found during the expanded timeframe, and is a TUHF, the patient will be considered a potential tobacco user.

If a health factor is found during the expanded timeframe and it is not one of the TUHF, CRS will then search for CPT 1034F or 1035F documented after the health factor. If one of these codes is found, the patient will be considered a potential tobacco user.

If no health factor was found, CRS will then search for any of the following codes documented through the beginning of the Report Period:

- Tobacco-related diagnoses (POV or Problem List entry where the status is not Inactive or Deleted) ICD-9: 305.1, 305.10 through 305.12 (old codes), 649.00 through 649.04; ICD-10: F17.2*0, F17.2*3, F17.2*8, F17.2*9, O99.33*
- CPT 99406, 99407, G0375 (old code), G0376 (old code), 1034F, 1035F, G8455 (old code), G8456 (old code), G8402 (old code), G8453 (old code), G9276

If any of these codes are found, the patient will be considered a potential tobacco user. If one of these codes is not found, the patient is considered a non-tobacco user and will not be included in the denominator.
If the patient is considered a potential tobacco user, CRS will then search for diagnosis (POV or Problem List entry where the status is not Inactive or Deleted) ICD-9: 305.13 Tobacco use in remission (old code) or V15.82; ICD-10: F17.2*1, Z87.891 with a date occurring after the health factor date and through the beginning of the report period. If one of these diagnoses is found, the patient will be considered as having quit their tobacco use and will not be included in the denominator. If a diagnosis is not found, the patient is included as a current tobacco user and will be included in the denominator.

**Tobacco Cessation Counseling**

### 2.6.1.3 Denominators

1. GPRA: Active Clinical Patients 2 through 5 for whom a BMI could be calculated.

### 2.6.1.4 Numerators

1. GPRA: Patients with a BMI at or above the 95th percentile.

### 2.6.1.5 Definitions

#### Age

All patients who are between the ages of 2 and 5 at the beginning of the report period and who do not turn age 6 during the report period are included in this measure. Age in the age groups is calculated based on the date of the most current BMI found. For example, a patient may be 2 at the beginning of the time period but is 3 at the time of the most current BMI found. That patient will fall into the Age 3 group.

#### BMI

CRS looks for the most recent BMI in the report period. CRS calculates BMI at the time the report is run, using NHANES II. A height and weight must be taken on the same day any time during the report period. The BMI values for this measure are reported differently than in Obesity Assessment since this age group is children ages 2 through 6, whose BMI values are age-dependent. The BMI values are categorized as Overweight for patients with a BMI in the 85th through 94th percentile and Obese for patients with a BMI at or above the 95th percentile.

Patients whose BMI either is greater or less than the Data Check Limit range, as shown in the following table, will not be included in the report counts for Overweight or Obese.

2.8.1.5 Definitions

Patient Age
Since the age of the patient is calculated at the beginning of the Report period, this measure may include patients up to 25 months old if they were within the eligible age range on the first day of the report period, and will not include any patients that were born after the first day of the report period. Patients born after the first day of the report period will be included in the following report period.

Infant Feeding Choice
The documented feeding choice from the file V Infant Feeding Choice that is closest to the exact age that is being assessed will be used. For example, if a patient was assessed at 45 days old as half breastfed and half formula and assessed again at 65 days old as mostly breastfed, the mostly breastfed value will be used since it is closer to the exact age of 2 months (i.e., 60 days). Another example is a patient who was assessed at 67 days as mostly breastfed and again at 80 days as mostly formula. In this case, the 67 days value of mostly breastfed will be used. The other exact ages are 180 days for 6 months, 270 days for 9 months, and 365 days for one year.

In order to be included in the age-specific screening numerators, the patient must have been screened at the specific age range. For example, if a patient was screened at 6 months and was exclusively breastfeeding but was not screened at 2 months, then the patient will only be counted in the 6 months numerator.

2.8.1.6 GPRA 2015 Target
During FY 2015, achieve the target rate of 29.0% for the proportion of two-month olds who are mostly or exclusively breastfeeding.
