1.0 CRS Selected Measures (Local) Report

The performance measure topics and their definitions that are included in the Clinical Reporting System (CRS) 2018 version 18.0 patch 1 Selected Measures (Local) Reports are shown in Section 2.0. Performance measures that are also included in the National Government Performance and Results Act of 1993 (GPRA)/GPRA Modernization Act (GPRAMA) Report are shown in Section 1.1.

Many performance measure topics include both the Active Clinical and User Population denominators. For brevity, the User Population denominator is not listed separately. To see which topics include the User Population denominator, refer to the *CRS Clinical Performance Measure Logic Manual for FY 2018 Clinical Measures*.

2.1.2.5 Definitions

Diabetes

First POV ICD-9: 250.00 through 250.93 or ICD-10: E10.* through E13.*
[SURVEILLANCE DIABETES] recorded in the V POV file prior to the Report Period.

A1c

Searches for most recent A1c test with a result during the Report Period. If none found, CRS searches for the most recent A1c test without a result.

A1c defined as:

- Current Procedural Terminology (CPT) 83036, 83037, 3044F through 3046F, 3047F (old code) [BGP HGBA1C CPTS]
- Logical Observations Identifiers, Names, Codes (LOINC) taxonomy
- Site-populated taxonomy DM AUDIT HGB A1C TAX

BP Documented

Exclusions: When calculating all Blood Pressure measurements (BPs) (using vital measurements or CPT codes), the following visits will be excluded:

- Service Category H (Hospitalization), I (In Hospital), S (Day Surgery), or O (Observation).
- Clinic code 23 (Surgical), 30 (ER), 44 (Day Surgery), 79 (Triage), C1 (Neurosurgery), or D4 (Anesthesiology)

CRS uses the mean of the last 3 BPs documented during the Report Period. If 3 BPs are not available, it uses the mean of last 2 BPs, or 1 BP if there is only 1 documented. If a visit contains more than 1 BP, the lowest BP will be used, defined as having the lowest systolic value. The mean Systolic value is calculated by adding the last 3 (or 2) systolic values and dividing by 3 (or 2). The mean Diastolic value is calculated by adding the diastolic values from the last 3 (or 2) BPs and dividing by 3 (or 2).

If CRS is not able to calculate a mean BP, it will search for CPT 0001F, 2000F, 3074F through 3080F, G9273, G9274 [BGP BP MEASURED CPT, BGP SYSTOLIC BP CPTS, BGP DIASTOLIC BP CPTS] or POV ICD-9: V81.1 [BGP HYPERTENSION SCREEN DXS] documented during the Report Period.

Controlled BP

CRS uses a mean, as described previously. If the mean systolic and diastolic values do not *both* meet the criteria for controlled, then the value is considered not controlled.

BP Documented and Controlled BP

If CRS is not able to calculate a mean BP from blood pressure measurements, it will search for the most recent of any of the following codes documented during the Report Period:

- BP Documented: CPT 0001F, CPT 2000F, G9273, G9274 [BGP BP MEASURED CPT], or POV ICD-9: V81.1 [BGP HYPERTENSION SCREEN DXS]; OR
- Systolic: CPT 3074F, 3075F, or 3077F [BGP SYSTOLIC BP CPTS] with Diastolic: CPT 3078F, 3079F, or 3080F [BGP DIASTOLIC BP CPTS]. The systolic and diastolic values do *not* have to be recorded on the same day. If there are multiple values on the same day, the CPT indicating the lowest value will be used.
- The following combinations represent BP less than 140/90 and will be included in the Controlled BP numerator: CPT 3074F or 3075F *and* 3078F or 3079F, OR G9273. All other combinations will *not* be included in the Controlled BP numerator.

Note: CPT codes are not included since they do not store the result, which is used in this topic.

A1c

Searches for most recent A1c test with a result during the Report Period. If more than one A1c test is found on the same day or the same visit and one test has a result and the other does not, the test with the result will be used. If both tests have a result, the last test done on the visit will be used.

If an A1c test with a result is not found, CRS searches for the most recent A1c test without a result.

- A1c defined as any of the following:
 - CPT 83036, 83037, 3044F through 3046F, 3047F (old code) [BGP HGBA1C CPTS]

2. Active Diabetic patients, defined as Active Clinical patients diagnosed with diabetes prior to the Report Period, *and* at least two visits during the Report Period, *and* two DM-related visits ever.
3. Active Adult Diabetic patients, defined by meeting the following criteria:
 - Who are 19 and older at the beginning of the Report Period
 - Whose first ever DM diagnosis occurred prior to the Report Period
 - Who had at least two DM related visits ever
 - With at least one encounter with DM POV in a primary clinic with a primary provider during the Report Period

2.1.4.5 Definitions

Diabetes

First DM Purpose of Visit ICD-9: 250.00 through 250.93 or ICD-10: E10.* through E13.* [SURVEILLANCE DIABETES] recorded in the V POV file prior to the Report Period.

Serum Creatinine

- Site-populated taxonomy DM AUDIT CREATININE TAX
- LOINC taxonomy

Note: CPT codes are not included since they do not store the result, which is used in this topic.

Exclusions

When calculating all BPs (using vital measurements or CPT codes), the following visits will be excluded:

- Service Category H (Hospitalization), I (In Hospital), S (Day Surgery), or O (Observation)
- Clinic code 23 (Surgical), 30 (ER), 44 (Day Surgery), 79 (Triage), C1 (Neurosurgery), or D4 (Anesthesiology)

BP Documented

CRS uses mean of last 3 BPs documented during the Report Period. If 3 BPs are not available, uses mean of last 2 BPs, or 1 BP if there is only 1 documented. If a visit contains more than one BP, the lowest BP will be used, defined as having the lowest systolic value. The mean Systolic value is calculated by adding the last 3 (or 2) systolic values and dividing by 3 (or 2). The mean Diastolic value is calculated by adding the diastolic values from the last 3 (or 2) BPs and dividing by 3 (or 2).

If CRS is not able to calculate a mean BP, it will search for CPT 0001F, 2000F, 3074F through 3080F, G9273, G9274 [BGP BP MEASURED CPT, BGP SYSTOLIC BP CPTS, BGP DIASTOLIC BP CPTS] or POV ICD-9: V81.1 [BGP HYPERTENSION SCREEN DXS] documented during the Report Period.

Controlled BP

CRS uses a mean, as described previously where BP is less than (<) 140/90. If *both* the mean systolic and diastolic values do not meet the criteria for controlled, then the value is considered not controlled.

BP Documented and Controlled BP

If CRS is not able to calculate a mean BP from blood pressure measurements, it will search for the most recent of any of the following codes documented on non-ER visits during the Report Period:

- BP Documented: CPT 0001F, 2000F, G9273, G9274 [BGP BP MEASURED CPT] or POV ICD-9: V81.1 [BGP HYPERTENSION SCREEN DXS]; OR
- Systolic: CPT 3074F, 3075F, or 3077F [BGP SYSTOLIC BP CPTS] WITH Diastolic: CPT 3078F, 3079F, or 3080F [BGP DIASTOLIC BP CPTS]. The systolic and diastolic values do not have to be recorded on the same day. If there are multiple values on the same day, the CPT indicating the lowest value will be used.
- The following combinations represent BP less than (<) 140/90 and will be included in the Controlled BP numerator: CPT 3074F or 3075F *and* 3078F or 3079F, OR G9273. All other combinations will *not* be included in the Controlled BP numerator.

2.1.4.6 GPRA 2018 Target

During GPRA Year 2018, achieve the target rate of 52.3% for the proportion of patients with diagnosed diabetes who have achieved BP control (defined as less than (<) 140/90).

2.1.4.7 Patient List

List of diabetic patients with blood pressure value, if any.

2.3.3.5 Definitions

Patient Age

Since the age of the patient is calculated at the beginning of the Report Period, the age range will be adjusted to 7 through 23 months at the beginning of the Report Period, which makes the patient between the ages of 19 through 35 months at the end of the Report Period.

Timing of Doses

Because IZ data comes from multiple sources, any IZ codes documented on dates within 10 days of each other will be considered as the same immunization.

Active Immunization Package Patients Denominator

Same as User Population definition *except* includes only patients flagged as active in the Immunization Package.

Note: Only values for the Report Period will be reported for this denominator since currently there is not a way to determine if a patient was active in the Immunization Package during the previous year or baseline periods.

Dosage and Types of Immunizations

- **4 Doses of DTaP**
 - 4 DTaP or DTP or Tdap
 - 1 DTaP or DTP or Tdap and 3 DT or Td
 - 1 DTaP or DTP or Tdap and 3 each of Diphtheria and Tetanus
 - 4 DT and 4 Acellular Pertussis
 - 4 Td and 4 Acellular Pertussis
 - 4 each of Diphtheria, Tetanus, and Acellular Pertussis
- **3 Doses of Polio**
 - 3 OPV
 - 3 IPV
 - Combination of OPV and IPV totaling 3 doses
- **1 Dose of MMR**
 - MMR
 - 1 M/R and one Mumps
 - 1 R/M and one Measles
 - 1 each of Measles, Mumps, and Rubella
- **3 or 4 doses of HIB, depending on the vaccine administered**

- **3 doses of Hepatitis B**
- **1 dose of Varicella**
- **4 doses of Pneumococcal**
- **1 dose of Hepatitis A**
- **2 or 3 doses of Rotavirus, depending on the vaccine administered**
- **2 doses of Influenza**

Not Medically Indicated (NMI) Refusal, Contraindication, and Evidence of Disease Information

Except for the Immunization Program Numerators, the following will also count toward meeting the definition, as defined in the following subsections:

- NMI refusals
- Evidence of disease
- Contraindications for individual immunizations

Note: NMI refusals are not counted as refusals; rather, they are counted as contraindications.

- For immunizations that allow a different number of doses (e.g., 2 or 3 Rotavirus): To count toward the numerator with the smaller number of doses, all of the patient's vaccinations must be part of the smaller dose series. For example, for a patient to count toward the Rotavirus numerator with only 2 doses, all 2 doses must be included in the 2-dose series codes listed in the Rotavirus definition. A patient with a mix of 2-dose and 3-dose series codes will need 3 doses to count toward the numerator. An exception to this is for the HIB vaccine: if the first 2 doses are part of the 3-dose series, then the patient only needs 3 doses (even if the third dose is included in the 4-dose series).
- Each immunization must be refused and documented separately. For example, if a patient has an NMI refusal for Rubella only, then there must be an immunization, contraindication, or separate NMI refusal for the Measles and Mumps immunizations.
- For immunizations where required number of doses is greater than one, only one NMI refusal is necessary to be counted in the numerator. For example, if there is a single NMI refusal for Hepatitis B, the patient will be included in the numerator.

- For immunizations where required number of doses is greater than one, only one contraindication is necessary to be counted in the numerator. For example, if there is a single contraindication for HiB, the patient will be included in the numerator.
- Evidence of disease will be checked for at any time in the child's life (prior to the end of the Report Period).
- To be counted in Subnumerator A, a patient must meet the numerator definition AND have evidence of disease, a contraindication, or an NMI refusal for any of the immunizations in the numerator. For example, if a patient was Rubella immune but had a Measles and Mumps immunization, the patient would be included in Subnumerator A.
- For the separate numerator for REF refusal (Patient Refusal for Service) in PCC or a Parent or Patient refusal in the IZ program, the conditions must be met:
 - Each immunization must be refused and documented separately. For example, if a patient has a REF refusal for Rubella, then there also must be an immunization, contraindication, or separate REF refusal for Measles and Mumps.
 - Where the required number of doses is greater than one, only one REF refusal in PCC or one Parent or Patient refusal in the IZ program is necessary to be counted in the numerator. For example, for the 4 DTaP numerators, only one refusal is necessary to be counted in the refusal numerator.

2.3.3.6 GPRA 2018 Target

During GPRA Year 2018, achieve the target rate of 45.6% for the proportion of AI/AN children ages 19 through 35 months who have received the recommended immunizations.

Notes: In FY 2013, the GPRA measure changed to the 4:3:1:3*:3:1:4 combination, which includes 3 or 4 HiB.

In FY 2011, the GPRA measure changed to the 4:3:1:3:3:1:4 combination, which includes pneumococcal.

2.3.3.7 Patient List

List of patients 19 through 35 months of age with IZ, if any. If a patient did not have all doses in a multiple dose vaccine, the IZ will not be listed. For example, if a patient only had 2 DTaP, no IZ will be listed for DTaP.

Note: Because age is calculated at the beginning of the Report Period, the patient's age on the list will be between 7 and 23 months

2.3.4 Adolescent Immunizations

2.3.4.1 Owner and Contact

Epidemiology Program: Dr. Scott Hamstra, Amy Groom, MPH

2.3.4.2 National Reporting

OTHER NATIONAL (included in new Other National Measures Report; not reported to OMB and Congress)

2.3.4.3 Denominators

1. Active Clinical patients age 13 years.
2. Male Active Clinical patients age 13 years.
3. Female Active Clinical patients age 13 years.
4. Active Clinical patients ages 13 through 17 years.
5. Male Active Clinical patients ages 13 through 17 years.
6. Female Active Clinical patients ages 13 through 17 years.

2.3.4.4 Numerators

Note: The only refusals included in all numerators are documented NMI refusals.

1. Patients who have received the 1:1:2* combination (i.e., 1 Tdap or Td, 1 Meningococcal, 2 or 3 HPV), including contraindications.
 - A. Patients with (1) a contraindication or (2) a documented NMI refusal.
2. Patients who have received the 1:1 combination (i.e., 1 Tdap or Td, 1 Meningococcal), including contraindications.
 - A. Patients with (1) a contraindication or (2) a documented NMI refusal.
3. Patients who have received 1 dose of Tdap or Td ever, including contraindications.
 - A. Patients with (1) a contraindication or (2) a documented NMI refusal.
 - B. Patients who have received 1 dose of Tdap ever, including contraindications.

4. Patients who have received 1 dose of meningococcal ever, including contraindications.
 - A. Patients with (1) a contraindication or (2) a documented NMI refusal.
5. Patients who have received 2 or 3 doses of HPV ever, including contraindications.
 - A. Patients with (1) a contraindication or (2) a documented NMI refusal.

2.3.4.5 Definitions

Timing of Doses

Because IZ data comes from multiple sources, any IZ codes documented on dates within 10 days of each other will be considered as the same immunization.

Dosage and Types of Immunizations

- 1 dose of Td or Tdap
- 1 dose of Meningococcal
- 2 or 3 doses of HPV—in order to qualify for 2 doses, the patient must have the first dose prior to their 15th birthday and the 2 doses must be separated by a minimum of 5 months

Not Medically Indicated (NMI) Refusal and Contraindication Information

Not Medically Indicated refusals and contraindications for individual immunizations will also count toward meeting the definition, as defined in the following subsections.

Note: NMI refusals are not counted as refusals; rather, they are counted as contraindications.

- For immunizations where required number of doses is greater than one, only one NMI refusal is necessary to be counted in the numerator. For example, if there is a single NMI refusal for Hepatitis B, the patient will be included in the numerator.
- For immunizations where required number of doses is greater than one, only one contraindication is necessary to be counted in the numerator. For example, if there is a single contraindication for HiB, the patient will be included in the numerator.

2.5.5.5 Definitions

Denominator

Current Tobacco Users or Tobacco Users in Cessation:

CRS will search first for all health factors documented in the Tobacco, TOBACCO (SMOKING), TOBACCO (SMOKELESS – CHEWING/DIP) and TOBACCO (ELECTRONIC NICOTINE DELIVERY SYSTEMS [ENDS]) categories during the Report Period.

If health factor(s) are found and at least one of them is one of the health factors listed below, the patient is counted as a current tobacco user or tobacco user in cessation. The patient is not counted as receiving cessation counseling.

Tobacco User Health Factors (TUHF):

- Cessation-Smoker
- Cessation-Smokeless
- Cessation ENDS user
- Current Smoker
- Current Smokeless
- Current Smoker and Smokeless

- Current ENDS user
- Current Smoker, status unknown
- Current Smoker, every day
- Current Smoker, some day
- Heavy Tobacco Smoker
- Light Tobacco Smoker

If a health factor is found and it is *not* a TUHF, CRS will then search for CPT 1034F or 1035F documented after the health factor. If one of these codes is found, the patient will be considered a tobacco user.

If no health factor was found, CRS will then search for any of the following codes documented during the Report Period:

- Tobacco-related diagnoses (POV or Problem List entry where the status is not Inactive or Deleted):
 - ICD-9: 305.1, 305.10 through 305.12 (old codes), 649.00 through 649.04; ICD-10: F17.2*0, F17.2*3, F17.2*8, F17.2*9, O99.33*, Z72.0 [BGP TOBACCO USER DXS]
 - SNOMED data set PXRMBGP CURRENT TOBACCO (Problem List only)
- CPT 99406, 99407, G0375 (old code), G0376 (old code), 1034F, 1035F, G8455 (old code), G8456 (old code), G8402 (old code), G8453 (old code), G9276 [BGP TOBACCO USER CPTS]

If any of these codes are found, the patient will be considered a tobacco user.

If no health factor or other tobacco user-defining code listed above was found during the specified timeframe, CRS will then search for the most recent health factor in the TOBACCO (SMOKING), TOBACCO (SMOKELESS – CHEWING/DIP) and TOBACCO (ELECTRONIC NICOTINE DELIVERY SYSTEMS [ENDS]) categories documented during an *expanded* timeframe of any time prior to the Report Period. For example, a patient with the most recent health factor being documented 5 years prior to the Report Period.

Note: If multiple health factors were documented on the same date and if any of them are TUHF(s), all of the health factors will be considered as TUHF(s).

If a health factor is found during the expanded timeframe, and is a TUHF, the patient will be considered a potential tobacco user.

If a health factor is found during the expanded timeframe and it is not one of the TUHFs, CRS will then search for CPT 1034F or 1035F documented after the health factor. If one of these codes is found, the patient will be considered a potential tobacco user.

If no health factor was found, CRS will then search for any of the following codes documented through the beginning of the Report Period:

- Tobacco-related diagnoses (POV or Problem List entry where the status is not Inactive or Deleted):
 - ICD-9: 305.1, 305.10 through 305.12 (old codes), 649.00 through 649.04; ICD-10: F17.2*0, F17.2*3, F17.2*8, F17.2*9, O99.33*, Z72.0 [BGP TOBACCO USER DXS]
 - SNOMED data set PXRMBGP CURRENT TOBACCO (Problem List only)
- CPT 99406, 99407, G0375 (old code), G0376 (old code), 1034F, 1035F, G8455 (old code), G8456 (old code), G8402 (old code), G8453 (old code), G9276 [BGP TOBACCO USER CPTS]

If any of these codes are found, the patient will be considered a potential tobacco user. If one of these codes is not found, the patient is considered a non-tobacco user and will not be included in the denominator.

If the patient is considered a potential tobacco user, CRS will then search for diagnosis (POV or Problem List entry where the status is not Inactive or Deleted) ICD-9: 305.13 Tobacco use in remission (old code), V15.82; ICD-10: F17.2*1, Z87.891 [BGP TOBACCO PAST USE DXS]; SNOMED data set PXRMBGP QUIT TOBACCO (Problem List only) with a date occurring after the health factor date and through the beginning of the Report Period. If one of these diagnoses is found, the patient will be considered as having quit their tobacco use and will not be included in the denominator. If a diagnosis is not found, the patient is included as a current tobacco user and will be included in the denominator.

2.6.5.5 Definitions

Major Depression

POV ICD-9: 296.20 through 296.25, 296.30 through 296.35, 298.0, 311; ICD-10: F32.0 through F32.4, F32.8 through F33.3, F33.41, F33.9 [BGP MAJOR DEPRESSION (ADM)]

Index Prescription (Rx) Start Date

The date of the earliest prescription for antidepressant medication filled during the denominator inclusion period. Note: Outside medications and e-prescribed medications (prescription number begins with "X" or days' supply is zero) will not be included in these measures.

Antidepressant Medications

Medication taxonomy BGP HEDIS ANTIDEPRESSANT MEDS.

- Medications are: Tricyclic antidepressants (TCA) and other cyclic antidepressants, Selective serotonin reuptake inhibitors (SSRI), Monoamine oxidase inhibitors (MAOI), Serotonin-norepinephrine reuptake inhibitors (SNRI), and other antidepressants. Medications must not have a comment of RETURNED TO STOCK.

Denominator Inclusions

To be included in the denominator, patient must meet the following condition:

- Filled a prescription for an antidepressant medication (see the list of medications above) within the 121st day of the year prior to the Report Period to the 120th day of the Report Period. For example, if Report Period is July 1, 2017 through June 30, 2018, patient must have filled a prescription during November 01, 2016 through October 29, 2017. In V Medication, Date Discontinued must not be equal to the prescription, (i.e., visit date).

Denominator Exclusions

Patients with any of the following will be excluded from the denominator:

- Patients who did not have a diagnosis of major depression in an inpatient, outpatient, ED, intensive outpatient or partial hospitalization setting (defined as Service Categories A and H) during the 60 days prior to the IPSD (inclusive) through 60 days after the IPSD (inclusive).
- Patients who had a new or refill prescription for antidepressant medication (see the list of medications that follows) within 105 days prior to the Index Rx Start Date are excluded as they do not represent new treatment episodes.

Effective Acute Phase Treatment Numerator

For all antidepressant medication prescriptions filled (see the list of medications that follows) within 114 days of the Index Rx Date, from V Medication CRS counts the days prescribed (i.e., treatment days) from the Index Rx Date until a total of 84 treatment days has been established. If the patient had a total gap exceeding 31 days or if the patient does not have 84 treatment days within the 114 day timeframe, the patient is not included in the numerator.

Note: If a medication was started and then discontinued, CRS will recalculate the number of Days Prescribed by subtracting the prescription date (i.e., visit date) from the V Medication Discontinued Date. For example:

- Rx Date: November 15, 2018
- Discontinued Date: November 19, 2018

Recalculated number of Days Prescribed:
 $November\ 19,\ 2018 - November\ 15,\ 2018 = 4$

Example of Patient Included in Numerator:

- First prescription:
 - Index Rx Date: November 1, 2017
 - Number of Days Prescribed: 30
 $November\ 1,\ 2017 + 30\ days = December\ 1,\ 2017$

Prescription covers the patient through December 1, 2017
- Second prescription:
 - Rx Date: December 15, 2017
 - Number of Days Prescribed: 30:
 - Gap #1 equals 14 days:
 $December\ 15,\ 2017 - December\ 1,\ 2017 = 14\ days$

Prescription covers the patient through January 14, 2018.
- Third prescription:
 - Rx Date: January 10, 2018
 - Number of Days Prescribed: 30
 - No gap days
 $November\ 1,\ 2017 + 114\ days = February\ 23,\ 2018$

Prescription covers the patient through February 13, 2018.

- Patient's 84th treatment day occurs on February 7, 2018:

February 7, 2018 ≤ February 23, 2018

Number of gap days = 14, which is < 31

Patient is included in the Numerator.

Example of Patient Not Included in Numerator:

- First prescription:

- Index Rx Date: November 1, 2017

- Number of Days Prescribed: 30

November 1, 2017 + 30 days = December 1, 2017

Prescription covers the patient through December 1, 2017.

- Second prescription:

- Rx Date: December 15, 2017

- Number of Days Prescribed: 30:

- Gap #1 equals 14 days:

December 15, 2017 – December 1, 2017 = 14 days

Prescription covers the patient through January 14, 2018.

- Third prescription:

- Rx Date: February 1, 2018

- Number of Days Prescribed: 30

- Gap #2 equals 18 days:

February 1, 2018 – January 14, 2018 = 18

- Total number of gap days = 32:

14 + 18 = 32

Patient is not included in the numerator.

Effective Continuation Phase Treatment Numerator

For all antidepressant medication prescriptions (see the previous list of medications) filled within 231 days of the Index Rx Date, CRS counts the days prescribed (i.e., treatment days) (from V Medication) from the Index Rx Date until a total of 180 treatment days has been established. If the patient had a total gap exceeding 51 days or if the patient does not have 180 treatment days within the 231-day timeframe, the patient is not included in the numerator.

Note: If a medication was started and then discontinued, CRS will recalculate the number of Days Prescribed by subtracting the prescription date (i.e., visit date) from the V Medication Discontinued Date. For example:

- Rx Date: November 15, 2018
- Discontinued Date: November 19, 2018

Recalculated number of Days Prescribed:
November 19, 2018 – November 15, 2018 = 4

2.6.5.6 GPRA 2018 Target

 - C. Total of overweight and obese.
2. Patients with documented refusal in past year.

2.7.1.4 Definitions

BMI

CRS calculates BMI at the time the report is run, using NHANES II. For 18 and under, a height and weight must be taken on the same day any time during the Report Period. For ages 19 through 50 years, height and weight must be recorded within last 5 years, not required to be on the same day. For over 50 years of age, height and weight within last 2 years, not required to be recorded on same day. Overweight but not obese is defined as BMI of 25 through 29 for adults ages 19 years and older. Obese is defined as BMI of 30 or more for adults 19 years of age and older. For ages 2 through 18 years, definitions are based on standard tables.

Patients whose BMI either is greater or less than the Data Check Limit range shown in the BMI Standard Reference Data Table in PCC will not be included in the report counts for Overweight or Obese.

Refusals

Include REF (refused), NMI, and UAS (unable to screen) and must be documented during the past year. For ages 18 years and under, both the height and weight must be refused on the same visit at any time during the past year. For ages 19 years and older, the height and weight must be refused during the past year and are not required to be on the same visit.

1. Patients with BMI in the 85th to 94th percentile
2. GPRA: Patients with a BMI at or above the 95th percentile.
3. Patients with a BMI at or above the 85th percentile.

2.7.2.5 Definitions

Age

All patients for whom a BMI could be calculated and who are between the ages of 2 and 5 at the beginning of the Report Period and who do not turn age 6 during the Report Period are included in this measure. Age in the age groups is calculated based on the date of the most current BMI found. For example, a patient may be 2 at the beginning of the time period but is 3 at the time of the most current BMI found. That patient will fall into the Age 3 group.

BMI

CRS looks for the most recent BMI in the Report Period. CRS calculates BMI at the time the report is run, using NHANES II. A height and weight must be taken on the same day any time during the Report Period. The BMI values for this measure reported differently than in Obesity Assessment since this age group is children ages 2 to 5, whose BMI values are age-dependent. The BMI values are categorized as Overweight for patients with a BMI in the 85th to 94th percentile and Obese for patients with a BMI at or above the 95th percentile.

A patient whose BMI either is greater or less than the Data Check Limit range shown in Table 2-2 will not be included in the report counts for Overweight or Obese.

Table 2-1: Data Check Limit

Low-High Ages	Sex	BMI (Overweight)	BMI (Obese)	Data Check Limits BMI >	Data Check Limits BMI <
2-2	Male	17.7	18.7	36.8	7.2
2-2	Female	17.5	18.6	37.0	7.1
3-3	Male	17.1	18.0	35.6	7.1
3-3	Female	17.0	18.1	35.4	6.8
4-4	Male	16.8	17.8	36.2	7.0

BP Values (all numerators)

Exclusions: When calculating all BPs (using vital measurements or CPT codes), the following visits will be excluded:

- Service Category H (Hospitalization), I (In Hospital), S (Day Surgery), or O (Observation)
- Clinic code 23 (Surgical), 30 (ER), 44 (Day Surgery), 79 (Triage), C1 (Neurosurgery), or D4 (Anesthesiology)

CRS uses mean of last 3 BPs documented during the Report Period. If 3 BPs are not available, uses mean of the last 2 BPs, or 1 BP if there is only 1 documented. If a visit contains more than 1 BP, the lowest BP will be used, defined as having the lowest systolic value. The mean Systolic value is calculated by adding the last 3 (or 2) systolic values and dividing by 3 (or 2). The mean Diastolic value is calculated by adding the diastolic values from the last 3 (or 2) blood pressures and dividing by 3 (or 2). If the systolic and diastolic values do not *both* meet the current category, then the value that is least controlled determines the category.

For the BP documented numerator only, if CRS is not able to calculate a mean BP, it will search for CPT 0001F, 2000F, 3074F through 3080F, G9273, G9274 [BGP BP MEASURED CPT, BGP SYSTOLIC BP CPTS, BGP DIASTOLIC BP CPTS] or POV ICD-9: V81.1 [BGP HYPERTENSION SCREEN DXS] documented the Report Period.

AMI

POV ICD-9: 410.0*-410.9*, 412, 429.79; ICD-10: I21.*, I22.*, I23.*, I25.2 [BGP AMI DXS PAMT] with Service Category H. If patient has more than one episode of AMI during the first 51 weeks of the Report Period, CRS will include only the first discharge.

Denominator Exclusions

Patients meeting any of the following conditions will be excluded from the denominator.

- Patients with Discharge Type of Irregular (Against Medical Advice [AMA]), Transferred, or contains "Death."
- Patients readmitted for any diagnosis within 7 days of discharge.
- Patients with a Diagnosis Modifier of C (Consider), D (Doubtful), M (Maybe, Possible, Perhaps), O (Rule Out), P (Probable), R (Resolved), S (Suspect, Suspicious), or T (Status Post).
- Patients with a Provider Narrative beginning with "Consider," "Doubtful," "Maybe," "Possible," "Perhaps," "Rule Out," "R/O," "Probable," "Resolved," "Suspect," "Suspicious," or "Status Post."

To Be Included in the Numerators,

A patient must meet one of the following two conditions:

- An active prescription (not discontinued as of (discharge date plus 7 days) and does not have a comment of RETURNED TO STOCK) that was prescribed prior to admission, during the inpatient stay, or within 7 days after discharge. "Active" prescription defined as:
$$\text{Days Prescribed} > (\text{Discharge Date} + 7 \text{ days} - \text{Order Date})$$
- Have a contraindication or previous adverse reaction to the indicated medication.

Contraindication or previous ADR or allergies are only counted if a patient did not have a prescription for the indicated medication. Patients without a prescription who have a contraindication, ADR, or allergy will be counted in sub- numerator B.

Note: If a medication was started and then discontinued, CRS will recalculate the number of Days Prescribed by subtracting the prescription date (i.e., visit date) from the V Medication Discontinued Date. For example:

- Rx Date: November 15, 2018
- Discontinued Date: November 19, 2018

Recalculated number of Days Prescribed:
November 19, 2018 – November 15, 2018 = 4

2. Count only (no percentage comparison to denominator). The total count of separate key STI incidents for Active Clinical patients during the defined period.
3. For use with denominator #1: GPRA Developmental: Number of needed HIV/AIDS screenings performed from 1 month prior to the date of first STI diagnosis of each incident through 2 months after.

Note: This numerator does *not* include refusals.

4. For use with denominator #1: Patients with documented HIV screening refusal during the Report Period.

2.8.5.5 Definitions

Key STIs

Chlamydia, gonorrhea, HIV/AIDS, and syphilis. Key STIs defined with the following POVs:

- Chlamydia: ICD-9: 079.88, 079.98, 099.41, 099.50 through 099.59; ICD-10: A56.*, A74.81 through A74.9
- Gonorrhea: ICD-9: 098.0 through 098.89; ICD-10: A54.*, O98.2*
- HIV/AIDS: ICD-9: 042, 042.0 through 044.9, 079.53, 795.71, V08; ICD-10: B20, B97.35, R75, Z21, O98.711 through O98.73 [BGP HIV/AIDS DXS]
- Syphilis: ICD-9: 090.0 through 093.9, 094.1 through 097.9; ICD-10: A51.* through A53.*

Logic for Identifying Patients Diagnosed with Key STI (Numerator #1)

Any patient with one or more diagnoses of any of the key STIs defined previously during the period 60 days prior to the beginning of the Report Period through the first 300 days of the Report Period.

Logic for Identifying Separate Incidents of Key STIs (Numerator #2)

One patient may have one or multiple occurrences of one or multiple STIs during the year, except for HIV. An occurrence of HIV is only counted if it is the initial HIV diagnosis for the patient ever. Incidents of an STI are identified beginning with the date of the first key STI diagnosis (see the previous definition) occurring between 60 days prior to the beginning of the Report Period through the first 300 days of the Report Period. A second incident of the same STI (other than HIV) is counted if another diagnosis with the same STI occurs 2 months or more after the initial diagnosis. A different STI diagnosis that occurs during the same 60-day time period as the first STI counts as a separate incident.

Table 2-2: Logic for identifying separate incidents of key STIs

Date	Visit	Total Incidents
August 1, 2017	Patient screened for Chlamydia	0
August 8, 2017	Patient diagnosed with Chlamydia	1
October 15, 2017	Patient diagnosed with Chlamydia	2
October 25, 2017	Follow-up for Chlamydia	2
November 15, 2017	Patient diagnosed with Chlamydia	2
March 1, 2018	Patient diagnosed with Chlamydia	3

Denominator Logic for Needed Screenings (Denominator #1)

One patient may need multiple screening tests based on one or more STI incidents occurring during the time period.

To be included in the needed HIV screening tests denominator, the count will be derived from the number of separate non-HIV STI incidents. HIV screening tests are recommended for the following key STIs: Chlamydia, Gonorrhea, Syphilis.

“Needed” screenings are recommended screenings that are further evaluated for contraindications. The following are reasons that a recommended screening is identified as not needed (i.e., contraindicated).

- Only one screening for HIV is needed during the relevant time period, regardless of the number of different STI incidents identified. For example, if a patient is diagnosed with Chlamydia and Gonorrhea on the same visit, only one screening is needed for HIV/AIDS.
- A patient with HIV/AIDS diagnosis prior to any STI diagnosis that triggers a recommended HIV/AIDS screening does not need the screening ever.

Numerator Logic

To be counted in the numerator, each needed screening in the denominator must have a corresponding lab test or test refusal documented in the period from 1 month prior to the relevant STI diagnosis date through 2 months after the STI incident.

- **HIV/AIDS Screening**

Any of the following during the specified time period:

- CPT 86689, 86701 through 86703, 87389 through 87391, 87534 through 87539, 87806, 80081 [BGP CPT HIV TESTS]
- Site-populated taxonomy BGP HIV TEST TAX

Dispensing Event

One prescription of an amount lasting 30 days or less. For prescriptions longer than 30 days, divide the days' supply by 30 and round down to convert. For example, a 100-day prescription is equal to 3 dispensing events:

$$100 \div 30 = 3.33, \text{ rounded down to } 3$$

Also, two different prescriptions dispensed on the same day are counted as two different dispensing events. Inhalers should also be counted as one dispensing event.

Note: If a medication was started and then discontinued, CRS will recalculate the number of Days Prescribed by subtracting the prescription date (i.e., visit date) from the V Medication Discontinued Date. For example:

- Rx Date: November 15, 2018
- Discontinued Date: November 19, 2018

Recalculated number of Days Prescribed:
November 19, 2018 – November 15, 2018 = 4

Each PDC Numerator

Proportion of days covered equals the number of days the patient was covered by at least one drug in the class divided by the number of days in the patient's measurement period.

The patient's measurement period is defined as the number of days between the Index Prescription Start Date and the end of the Report Period. When calculating the number of days, the patient was covered by at least one drug in the class, if prescriptions for the same drug overlap, the prescription start date for the second prescription will be adjusted to be the day after the previous fill has ended.

Note: If a medication was started and then discontinued, CRS will recalculate the number of Days Prescribed by subtracting the prescription date (i.e., visit date) from the V Medication Discontinued Date. For example:

- Rx Date: November 15, 2018
- Discontinued Date: November 19, 2018

Recalculated number of Days Prescribed:
November 19, 2018 – November 15, 2018 = 4

Example of Proportion of Days Covered

Report Period: January 1 through December 31, 2018

- First prescription:
 - Index Rx Start Date: March 1, 2018
 - Days' Supply: 90
 - Prescription covers patient through May 29, 2018
- Second prescription:
 - Rx Date: May 26, 2018
 - Days' Supply: 90
 - Prescription covers patient through August 27, 2018
- Third prescription:

- Rx Date: September 11, 2018
- Days' Supply: 180
- Gap:
September 11, 2018 – August 27, 2018 = 15 days
- Prescription covers patient through March 8, 2019

Patient's measurement period:

March 1, 2018 through December 31, 2018 = 306 days

Days patient was covered:

*March 1, 2018 through August 27, 2018 +
September 11, 2018 through December 31, 2018 = 292 days*

PDC:

$292 \div 306 = 95\%$

Each Gap Numerator

CRS will calculate whether a gap in medication therapy of 30 or more days has occurred between each consecutive medication dispensing event during the Report Period. A gap is calculated as the days not covered by the days' supply between consecutive medication fills.

Example of Medication Gap Greater Than or Equal to 30 Days:

Report Period: January 1 through December 31, 2018

- First prescription:
 - Rx Date: April 1, 2018
 - Days' Supply: 30
 - Prescription covers patient through April 30, 2018
- Second prescription:
 - Rx Date: July 1, 2018
 - Days' Supply: 90
 - Gap #1:
July 1, 2018 – April 30, 2018 = 61 days

Prescription covers patient through September 28, 2018

- Third prescription:
 - Rx Date: October 1, 2018
 - Days' Supply: 90

- Gap #2:
October 1, 2018 – September 28, 2018 = 2 days

2.9.10.5 Definitions

Patient Age

Since the age of the patient is calculated at the beginning of the Report Period, this measure may include patients up to 25 months old if they were within the eligible age range on the first day of the Report Period and will not include any patients that were born after the first day of the Report Period. Patients born after the first day of the Report Period will be included in the following Report Period.

Infant Feeding Choice

The documented feeding choice from the file V Infant Feeding Choice that is closest to the exact age that is being assessed will be used. For example, if a patient was assessed at 45 days old as half breastfed and half formula fed and assessed again at 65 days old as mostly breastfed, the mostly breastfed value will be used since it is closer to the exact age of 2 months (i.e., 60 days). Another example is a patient who was assessed at 67 days as mostly breastfed and again at 80 days as mostly formula. In this case, the 67 days' value of mostly breastfed will be used. The other exact ages are 180 days for 6 months, 270 days for 9 months, and 365 days for 1 year.

In order to be included in the age-specific screening numerators, the patient must have been screened at the specific age range. For example, if a patient was screened at 6 months and was exclusively breastfeeding but was not screened at 2 months, then the patient will only be counted in the 6 months' numerator.

2.9.10.6 GPRA 2018 Target

During GPRA Year 2018, achieve the target rate of 39.0% for the proportion of 2-month olds who are mostly or exclusively breastfeeding.

- For nonbenzodiazepine hypnotics (BGP HEDIS NONBENZODIAZ MEDS), a patient must have received a single dispensing event with a days' supply greater than 90 days for any nonbenzodiazepine hypnotic products during the Report Period.
- For medications dispensed during the report period, include any days supply that extends beyond the end of the report period. For example, a prescription of a 90-day supply dispensed on the last day of the report period counts as a 90-day supply.
