1.0 Introduction

The Elder Care Report contains clinical quality measures for older patients. Most of the measures are available for all ages in other reports. For this report, the denominator is changed to primarily focus on patients 55 years and older, though the age range may differ for some measures. The intent of this report is to provide a tool with which to focus on the quality of care provided to older patients.

Notations used in this document are described in Table 1-1.

A1c

Searches for most recent A1c test with a result during the Report Period. If more than one A1c test is found on the same day or the same visit and one test has a result and the other does not, the test with the result will be used. If both tests have a result, the last test done on the visit will be used.

If an A1c test with a result is not found, CRS searches for the most recent A1c test without a result.

- A1c defined as:
  - Current Procedural Terminology (CPT) 83036, 83037, 3044F through 3046F, 3047F (old code), 3051F, 3052F [BGP HGBA1C CPTS]

2. GPRA: Patients with controlled blood pressure (BP), defined as below 140/90, i.e., the mean systolic value is less than 140 and the mean diastolic value is less than (<) 90.

3. Patients with blood pressure that is not controlled.

2.1.3.4 Definitions

Diabetes

First DM Purpose of Visit recorded in the V POV file or Problem List Entry where the status is not Deleted with Date of Onset or Date Entered prior to the Report Period:

- ICD-9: 250.00 through 250.93 or ICD-10: E10.* through E13.* [SURVEILLANCE DIABETES]
- SNOMED data set PXRM DIABETES (Problem List only)

Exclusions

When calculating all BPs (using vital measurements or CPT codes), the following visits will be excluded:

- Service Category H (Hospitalization), I (In Hospital), S (Day Surgery), or O (Observation)
- Clinic code 23 (Surgical), 30 (ER), 44 (Day Surgery), 79 (Triage), C1 (Neurosurgery), or D4 (Anesthesiology)

BP Documented

CRS uses the mean of the last three BPs documented during the Report Period. If three BPs are not available, CRS uses the mean of the last two BPs, or one BP if there is only one documented. If a visit contains more than one BP, the lowest BP will be used, defined as having the lowest systolic value. The mean Systolic value is calculated by adding the last three (or two) systolic values and dividing by three (or two). The mean Diastolic value is calculated by adding the diastolic values from the last three (or two) BPs and dividing by three (or two).
If CRS is not able to calculate a mean BP, it will search for CPT 0001F, 2000F, 3074F through 3080F, G9273, G9274 [BGP BP MEASURED CPT, BGP SYSTOLIC BP CPTS, BGP DIASTOLIC BP CPTS] or POV ICD-9: V81.1 [BGP HYPERTENSION SCREEN DXS] documented during the Report Period.

**Controlled BP**

CRS uses a mean, as described above where BP is below 140/90. If the mean systolic and diastolic values do not both meet the criteria for controlled, then the value is considered not controlled.

**BP Documented and Controlled BP**

If CRS is not able to calculate a mean BP from blood pressure measurements, it will search for the most recent of any of the following codes documented during the Report Period:

- **BP Documented**: CPT 0001F, 2000F, G9273, G9274 [BGP BP MEASURED CPT] or POV ICD-9: V81.1 [BGP HYPERTENSION SCREEN DXS]; or

- **Systolic**: CPT 3074F, 3075F, or 3077F [BGP SYSTOLIC BP CPTS] WITH **Diastolic**: CPT 3078F, 3079F, or 3080F [BGP DIASTOLIC BP CPTS]. The systolic and diastolic values do not have to be recorded on the same day. If there are multiple values on the same day, the CPT indicating the lowest value will be used.

- The following combinations represent BP below 140/90 and will be included in the Controlled BP numerator: CPT 3074F or 3075F and 3078F or 3079F, or G9273. All other combinations will not be included in the Controlled BP numerator.

   B. For those with a BMI calculated, patients considered obese using BMI and standard tables.
   
   C. Total of overweight and obese.

2. Patients with documented refusal in past year.

2.6.1.4 Definitions

**BMI**

CRS calculates BMI at the time the report is run, using NHANES II. For 18 and under, a height and weight must be taken on the same day any time during the Report Period. For 19 through 50, height and weight must be recorded within last five years, not required to be on the same day. For over 50, height and weight within last two years not required to be recorded on same day. Overweight but not obese is defined as BMI of 25 through 29 for adults 19 and older. Obese is defined as BMI of 30 or more for adults 19 and older. For ages 2 through 18, definitions based on standard tables.

Patients whose BMI either is greater or less than the Data Check Limit range shown in the BMI Standard Reference Data Table in PCC will not be included in the report counts for Overweight or Obese.

**Refusals**

Include REF (refused), NMI, and UAS (unable to screen). Must be documented during the past year. For ages 18 and under, both the height and weight must be refused on the same visit at any time during the past year. For ages 19 and older, the height and weight must be refused during the past year and are not required to be on the same visit.

2.6.2.3 Numerators

2.6.2.4 Definitions
BP Values (all numerators)

Exclusions: When calculating all BPs (using vital measurements or CPT codes), the following visits will be excluded:

- Service Category H (Hospitalization), I (In Hospital), S (Day Surgery), or O (Observation)
- Clinic code 23 (Surgical), 30 (ER), 44 (Day Surgery), 79 (Triage), C1 (Neurosurgery), or D4 (Anesthesiology)

CRS uses the mean of the last three BPs documented in the past two years. If three BPs are not available, CRS uses mean of the last two BPs, or one BP if there is only one documented. If a visit contains more than one BP, the lowest BP will be used, defined as having the lowest systolic value. The mean Systolic value is calculated by adding the last three (or two systolic values and dividing by three [or two]). The mean Diastolic value is calculated by adding the diastolic values from the last three (or two) blood pressures and dividing by three (or two). If the systolic and diastolic values do not both meet the current category, then the value that is least controlled determines the category.

For the BP documented numerator only, if CRS is not able to calculate a mean BP, it will search for CPT 0001F, 2000F, 3074F through 3080F, G9273, G9274 [BGP BP MEASURED CPT, BGP SYSTOLIC BP CPTS, BGP DIASTOLIC BP CPTS] or POV ICD-9: V81.1 [BGP HYPERTENSION SCREEN DXS] documented during the Report Period.
