FY 2014 URBAN PROGRAM RESULTS SUMMARY AND ANALYSIS

Introduction: Background and Data Collection

FY 2014 marks the ninth year that urban programs have been reporting GPRA (Government Performance and Results Act) data to the Indian Health Service. Urban programs report on a subset of GPRA measures, including three of four GPRAMA (Government Performance and Results Act Modernization Act) measures.

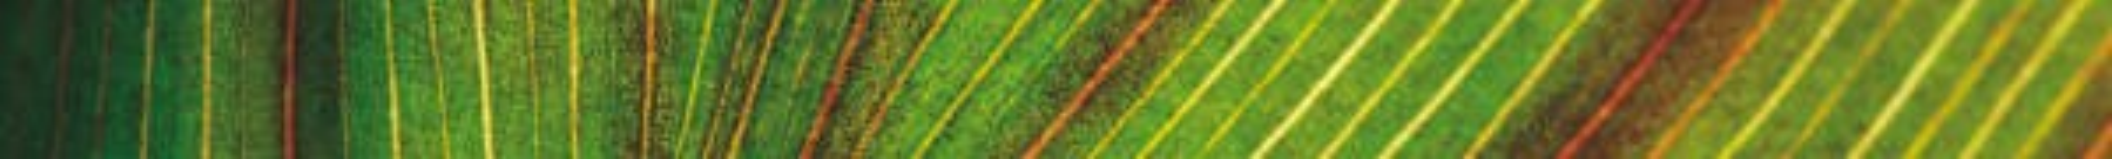

In FY 2014 urban programs reported data for 17 clinical GPRA measures. This includes 16 measures with specific targets (either numerical or “baseline”) and one long term measure (Childhood Weight Control) with no specific target for FY 2014. Urban programs are required to meet the same targets as Federal and Tribal programs for the measures they report.

Like Tribal programs, urban programs are not required to use the Resource Patient Management System (RPMS) as their patient data management system. However, unlike Tribal programs, urban programs are required to report GPRA data in order to receive funding. Many urban programs have opted to use RPMS and the Clinical Reporting System (CRS), a software application that runs off of RPMS, to report GPRA data. CRS data is validated and the measure logic is updated at least annually. Therefore, data from different CRS sites can be combined and reported as an aggregate rate. About one-third of urban programs have not opted to use RPMS/CRS for GPRA reporting. As of FY 2014, urban programs that have not opted to use RPMS and CRS are allowed to perform a 100% audit and submit GPRA results in Excel spreadsheet format. The National GPRA Support Team provides detailed instructions and an Excel template for non-RPMS programs to report data; however, data from non-CRS programs is not combined with CRS data, as it cannot be validated by an external source. Therefore only data from urban programs reporting via CRS are included in the official urban GPRA results.

During FY 2014, 33 urban programs reported GPRA/GPRAMA data, unchanged from FY 2013. 23 urban programs reported data via RPMS/CRS and 10 reported via Excel spreadsheet from a non-RPMS data source. No new programs transitioned to CRS reporting in FY 2014, and one program stopped reporting via CRS and submitted an Excel spreadsheet instead. In previous years the number of programs that reported via CRS out of the total number of urban programs reporting was:

FY 2013: 24 of 33
FY 2012: 24 of 35
FY 2011: 21 of 34
FY 2010: 18 of 34
FY 2009: 11 of 35

The final results for all 33 urban programs are included in the FY 2014 Urban Program Report, including individual dashboards for each program, and three national aggregate dashboards.

FY 2014 Measures and Results

In FY 2014, urban programs reported data for 16 measures with targets and reported data for the Childhood Weight Control measure, a long-term measure with no specific target for FY 2014. Results from the 23 urban programs that reported via CRS were used to calculate whether measures with targets were met or not met.

Urban programs currently report three of four clinical GPRA measures that are now classified as GPRAMA measures: Diabetes: Good Glycemic Control, Childhood Immunizations, and Depression Screening. Urban programs do not yet report data for the CVD Comprehensive Assessment GPRAMA Measure.

In FY 2014, urban programs met 4 of 16 measure targets. Of the four measures that met targets, three had significant logic changes and therefore had “baseline” targets. Any result reported for a baseline target counts as met. The measures with baselines were Diabetes: Nephropathy Assessed, Pneumococcal Immunization, and Pap Screening. The one measure met by urban programs that did not have a baseline target was Diabetes: Controlled Blood Pressure.

Urban programs did not meet the remaining 12 measures with specific targets, including Diabetes: Good Glycemic Control, Diabetes: LDL Assessed, Childhood Immunizations, Influenza Immunization, Mammography Screening, Colorectal Cancer Screening, Tobacco Screening, Alcohol Screening, DV/IPV Screening, Depression Screening, Prenatal HIV Screening, and Breastfeeding Rates.

However, despite not meeting the majority of targets, urban programs did improve over FY 2013 performance. Overall, urban programs performed better on 10 measures with comparable data in FY 2014 compared to FY 2013. Measures that improved include: Diabetes: Controlled Blood Pressure, Diabetes: LDL Assessed, Childhood Immunizations, Influenza Immunization, Mammography Screening, Colorectal Cancer Screening, Tobacco Cessation Counseling, Alcohol Screening, DV/IPV Screening, and Depression Screening.

Breakout Results

There are three categories of urban programs: Comprehensive Service programs, Limited Service programs, and Outreach and Referral programs. A comprehensive program provides direct medical care to patients for 40 or more hours per week, though the range of services varies among programs. A limited program provides direct medical care to patients for less than 40 hours per week. An outreach and referral program provides mental health, substance abuse, health education and referral services, but no direct medical care.

There are 21 programs that provide comprehensive services to patients, and in FY 2014, 13 of these programs reported data via CRS. There are 7 programs with limited service, 6 of which reported data via CRS, and 5 outreach and referral programs, 4 of which reported data via CRS. Ten programs (8 comprehensive, 1 limited, 1 outreach and referral) reported via Excel spreadsheet.

All urban programs are required to report data on GPRA measures regardless of whether they provide the screening or service to their patients directly. Therefore, results from limited and outreach and referral programs often are incomplete, and their results for many measures are often below the average.

Among CRS programs, the 13 Comprehensive Service urban programs had the highest average results for all measures except: Diabetes: LDL Assessed, Pap Screening, Mammography Screening, Tobacco Cessation, Childhood Immunizations, and Prenatal HIV Screening. Limited Service programs had the highest average on these six measures (in FY 2013 Limited Service programs exceeded Comprehensive Service programs in the Diabetes: LDL Assessed, Tobacco Cessation, and Pap Screening measures.) Outreach and Referral programs had the lowest rates for all measures.

Also, Comprehensive Service programs exceeded the national targets for Diabetes: Good Glycemic Control and Diabetes: Blood Pressure Control.

Individual Program Results

While reviewing individual urban program results in this report, it is important to keep in mind the limits of the various data collection methods. Non-CRS sites report results on spreadsheets, and are not required to submit supporting documentation. IHS cannot validate results from non-RPMS electronic systems, and these manual audits have not been independently verified. Finally, while CRS results can be validated, some urban programs either have transitioned recently to CRS for reporting, or do double data-entry with another information system. As a result, measure results can be impacted by the timeliness, accuracy, and completeness of data entry into RPMS. Therefore, all results, but particularly those from sites not reporting through CRS, should be viewed with some caution. Also note that if a program did not report any data for a specific measure, the result is categorized as “no data.”
