Appendix 1: Urban Program Results—Data Sources .................................................................. 45
FY 2017 URBAN PROGRAM RESULTS SUMMARY AND ANALYSIS

Since FY 2006, urban programs have reported data for a subset of the clinical GPRA (Government Performance and Results Act) measures reported by federal and tribal Indian health programs. In FY 2017, urban programs reported a total of 20 clinical performance measures, including three of four GPRAMA (GPRA Modernization Act) measures. Urban programs are required to meet the same targets as Federal and Tribal programs for all of the measures they report.

Like tribal programs, urban programs are not required to use the Resource Patient Management System (RPMS) as their patient data management system. However, unlike tribal programs, urban programs are required to report GPRA/GPRAMA data in order to receive funding. Most urban programs have opted to use RPMS and the Clinical Reporting System (CRS), a software application that runs off of RPMS, to report GPRA data. CRS data is validated and the measure logic is updated twice annually. Therefore, data from different CRS sites can be combined and reported as an aggregate rate. About one-third of urban programs have not opted to use RPMS/CRS for GPRA reporting. In FY 2017, as in previous years, urban programs that have not opted to use RPMS and CRS were allowed to perform a 100% audit and submit GPRA results in Excel spreadsheet format. The National GPRA Support Team provides detailed instructions and an Excel template for non-RPMS programs to report data during the second, third, and fourth quarters of the GPRA year; however, data from non-CRS programs is not combined with CRS data, as it cannot be validated by an external source. Therefore, only data from urban programs reporting via CRS are included in the official urban GPRA results.

During FY 2017, 31 contracted urban programs reported end-of-year GPRA/GPRAMA data. 20 of these programs reported data via RPMS/CRS, and 11 reported via Excel spreadsheet from a non-RPMS data system. Two programs that submitted data via CRS in prior years switched to non-RPMS reporting in FY 2017; one of those programs switched at the end of the year and was unable to report GPRA data for FY 2017. In addition, one program that had been submitting data via CRS ceased operations before the end of the GPRA year and did not report. In previous years, the number of programs reporting via CRS was:

FY 2016: 23 of 33
FY 2015: 24 of 33
FY 2014: 23 of 33
FY 2013: 24 of 33
FY 2012: 24 of 35
FY 2011: 21 of 34
FY 2010: 18 of 34
FY 2009: 11 of 35
FY 2017 URBAN PROGRAM RESULTS SUMMARY AND ANALYSIS

The final, end-of-year results for all 31 reporting urban programs are included in this FY 2017 Urban Program Report, including individual dashboards for each program, and three national aggregate dashboards.

FY 2017 Measures and Results

In FY 2017, urban programs reported data for 20 clinical measures, including 16 measures with numeric targets, one new measure with a baseline target, the long-term Childhood Weight Control Measure that had no specific target for FY 2017, and two contextual diabetes measures that have no targets. Urban programs reported three of four clinical GPRA measures classified as GPRAMA measures: Diabetes: Good Glycemic Control, Childhood Immunizations, and Depression Screening. Urban programs did not report data for the new CVD Statin Therapy GPRAMA Measure, which replaced the CVD Comprehensive Assessment GPRAMA Measure in FY 2017. Urban programs also did not report data for nine other clinical GRPA measures reported by Tribal and Federal programs.

Results from the 20 urban programs that reported end-of-year data via CRS were used to calculate whether measures with targets were met or not met. Measures with baseline targets are automatically “met” with any result.

In addition to the new Universal Alcohol Screening measure, which had a baseline target, urban programs also met 2 of the 16 measures with specific numeric targets. These measures were Diabetes: Controlled Blood Pressure and Breastfeeding Rates. Urban programs met these two measures in FY 2016 as well.

Urban programs did not meet targets for 14 measures, including Diabetes: Good Glycemic Control, Diabetes: Statin Therapy, Diabetes: Nephropathy Assessed, Influenza Vaccination 6mo-18yrs, Influenza Vaccination 18+, Pneumococcal Vaccination, Childhood Immunization, Pap Screening, Mammography Screening, Colorectal Cancer Screening, Tobacco Cessation, Domestic/Intimate Partner Violence Screening, Depression Screening, and HIV Screening Ever.

However, despite not meeting the majority of targets, urban programs did improve over FY 2016 performance on many measures. Overall, urban programs performed better on 7 of 16 measures in FY 2017 compared to FY 2016.

Measures that improved in 2017 include: Diabetes: Statin Therapy, Influenza Vaccination 6mo-18yrs, Influenza Vaccination 18+, Childhood Immunizations, Colorectal Cancer Screening, HIV Screening Ever, and Breastfeeding Rates. The measures with the largest improvement were:
FY 2017 URBAN PROGRAM RESULTS SUMMARY AND ANALYSIS

Diabetes: Statin Therapy and Influenza Vaccination 18+, which improved by 3.4% and 2.6%, respectively, between 2016 and 2017. The Childhood Immunization GPRAMA measure also improved over the 2016 rate by 1.9%, and Influenza Vaccination 6mo-17yrs improved by 1.5%. (Note: the Breastfeeding Rates measure also improved from 50.0% to 66.7% but this measure has a very low denominator—only 3 patients in FY 2017—so large increases or decreases are not significant.)

Results by Program Type

There are three service categories of urban programs: Comprehensive Service programs, Limited Service programs, and Outreach and Referral programs. A Comprehensive Service program provides direct medical care to patients for 40 or more hours per week, though the range of services varies among programs. A Limited Service program provides direct medical care to patients for less than 40 hours per week. An Outreach and Referral program provides mental health, substance abuse, health education and referral services, but no direct medical care.

In FY 2017 there were 19 Comprehensive Service urban programs that reported final GPRA data, and 10 of these programs reported via CRS. There were 7 Limited Service programs, 6 of which reported data via CRS, and 5 Outreach and Referral programs, 4 of which reported data via CRS. The remaining 11 programs (9 Comprehensive, 1 Limited, 1 Outreach and Referral) reported via Excel spreadsheet.

All urban programs are required to report data on GPRA measures regardless of whether they provide the screening or service to their patients directly. Therefore, results from Limited and Outreach and Referral programs often are incomplete compared to Comprehensive Service programs.

In the past, Comprehensive Service Programs generally had the highest average results for most measures, but in FY 2017 two of the highest-performing urban sites switched to non-RPMS data systems, which lowered the overall results for Comprehensive Service programs on many measures. However, Comprehensive Service programs reporting via CRS still had the highest results for 10 measures overall.

Among CRS programs, the Comprehensive Service urban sites had the highest average results for the following measures: Diabetes: Good Glycemic Control, Diabetes: Controlled Blood Pressure, Diabetes: Statin Therapy, Pneumococcal Vaccination, Childhood Immunization, Mammography Screening, Universal Alcohol Screening, DV/IPV Screening, Depression Screening, and HIV Screening. Comprehensive Service programs were the only ones to report any denominators/results for the Breastfeeding Rates measure.
FY 2017 URBAN PROGRAM RESULTS SUMMARY AND ANALYSIS

Limited Service sites had the highest average results for the following measures: Diabetes: Nephropathy Assessed, Pap Screening, Colorectal Cancer Screening, and Tobacco Cessation. Outreach and Referral sites had the highest average results for the Influenza Vaccination 6mo-17yrs and Influenza Vaccination 18+ measures.

Non-CRS program data is of varying quality and generally should not be compared directly to CRS data, but non-CRS programs reported average rates exceeding the urban CRS program average on 11 measures, and higher than the IHS national average on the Diabetes: Good Glycemic Control, Diabetes: Controlled Blood Pressure, and Diabetes: Statin Therapy measures.

Future Directions

As of FY 2018, GPRA data will no longer be reported via CRS. GPRA data will come from the National Data Warehouse (NDW), and be compiled and reported via the Integrated Data Collection System (IDCS). The NDW can accept data in HL7 format from non-RPMS data systems. Therefore all urban programs will be included in official GPRA results as of FY 2018, and urban programs will be reporting results for all clinical GPRA measures as of FY 2018, not just a subset of measures.

Individual Program Results

This report contains dashboards summarizing final GPRA results from each urban program. When reviewing these results, it is important to keep a few factors in mind. Non-CRS sites reported GPRA results via Excel spreadsheet, and are not required to submit supporting documentation and therefore IHS cannot validate or verify these results. Additionally, while CRS results can be validated, some urban programs perform double data-entry with RPMS and another information system. As a result, measure results can be impacted by the timeliness, accuracy, and completeness of data entry into RPMS. Therefore, all results, but particularly those from sites not reporting through CRS, should be viewed with some caution. Also note that if a program reported zero patients in both the numerator and denominator for a specific measure or did not report any result at all, the result is categorized as “no data.”
