

Health Care Facilities Construction (HCFC)
Green Infrastructure Project Guidelines

Project Prioritization and Implementation Requirements

Background: The Office of Environmental Health and Engineering (OEHE) has received funding for Green Infrastructure Projects. The appropriation directs the Service to incorporate planning, design, and operations of buildings to reduce costs; minimize environmental impacts; use renewable energy; incorporate green infrastructure and implement the most current energy efficiency codes and standards; and contribute to improved health outcomes to the maximum extent practicable.

Process: [Division of Facilities Planning and Construction](#) (DFPC) is requesting that all interested Areas submit project specific proposals. All proposals must be submitted through the appropriate IHS Area Office **no later than Thursday January 23, 2025**. This includes proposals from service units and tribal entities. For tribally owned or operated facilities, tribes are encouraged to consult in advance with their respective Area Office to assure consistency with other submissions.

All projects will be assessed, ranked and awarded until funds are exhausted. Any funds not awarded, will be added to the next year's allocation.

Project Evaluations: The DFPC will review and prioritize funding requests for activities that meet the requirements for Green Infrastructure Funds.

All submitted projects should be under contract within one year of the Notice of Award. When a project is approved for funding, the Applicant is committed to provide timely progress toward completion of the full scope of work within the identified funding. If no progress has been made within two years after the funds have been allocated, the DFPC will determine whether to pull back the funding.

Methodology/Criteria: DFPC is going to utilize five components to assess and allocate available Green Infrastructure Funds.

1. The simple Return on Investment (ROI) – Evaluate the project and calculate the ROI using the attached Excel calculation sheet (See Exhibit 2 for sample template). Projects that have an ROI longer than 20 years must indicate the benefit regarding sustainability or conservation mandates.
2. Requirements Compliance – If a law or executive order mandates improvements.
3. Reduction in energy use/increase in renewable energy generated for the facility
4. Reduction in water use
5. Enhance Indoor Environmental Quality

Documentation: Requests for funding are made by submission of an IHS Area-approved; three-to-five page Request for Funding (RFF) to the DFPC. The submission should include supporting documentation, summaries of studies, and cost estimates. This document is not approval to construct the project, but rather a funding request to support the project. A Project Summary Document (PSD) or Program Justification Document (PJD) may be needed for approval to implement the project, depending on the estimated cost of the planned project.

All submissions must contain the following:

1. Title/Signature page
 - a. Project name
 - b. Project number
 - c. Building Identifier (Installation Number – Building Number) for each building
 - d. Area Office review (OEHE Director)

Health Care Facilities Construction (HCFC)
Green Infrastructure Project Guidelines

2. Executive summary
 - a. Summary description of the project
 - b. Estimated time of completion
 - c. Estimated Cost (including cost of the Environmental Review)
3. Body (Note: look at the scoring below and make it easy for the reviewer to find the elements required to score the project)
 - a. Details of project
 - b. State any Laws / Regulation this project will address
 - c. Detailed schedule
 - d. Detailed cost estimate
 - e. State the estimated time of ROI
 - f. Details of savings
 - i. Dollars saved
 - ii. Energy saved
 - iii. Water saved
 - g. Change in Existing Building Assessment score
4. Appendix
 - a. Plans or layouts that will better define the project
 - b. ROI calculations
 - c. Two "Existing Building Assessment Tools"
 - i. One calculating the current condition
 - ii. One calculating the projected score after the project.

Members of the DFPC will evaluate eligible proposals using evaluation factors in Exhibit 1, "Factor Ratings Evaluations." The scoring criteria are used to evaluate the impact of the project on sustainability-related requirements, mandates, goals, and targets.

Submissions: All submissions must be in electronic format. The complete package must be in **one** pdf file.

Name the file with the Area designator followed by the project name and number, for example "TU - San Queen Lighting TU4SX033Z7.pdf".

All proposals shall be routed through the local Area Office for signature by the Director of OEHE. The Area Office shall forward the signed proposal to Headquarters DFPC at IHSDFPC.Submittals@ihs.gov and CC Mr. Jim White at jim.white@ihs.gov.

Timetable: Proposals shall be submitted in the first quarter of the fiscal year (October thru January). The ranking of projects will occur in January of each year, and the distribution of funds soon after. Area Offices will be notified in October of each year funding is expected so they have sufficient time to notify applicants within their Area, and to prepare and submit the RFF.

Health Care Facilities Construction (HCFC)
Green Infrastructure Project Guidelines

Call for Proposals	October 1, 2024
Proposals accepted	October 1, 2024 to January 23, 2025
Evaluation of Proposals	February-March, 2025*
Distribution of Funds	Prior to construction According to approved schedule
NEPA Compliance	
Project completion	
<i>*if funds are appropriated</i>	

Evaluation Procedures: Prior to the DFPC evaluation meeting, the DFPC director will determine whether the submission is complete. Only eligible proposals that have a complete submittal as specified above will be evaluated.

Proposals will be ranked; the DFPC members will designate a numerical score for each of the evaluation factors. If a factor is not applicable, it will receive a score of zero.

The project score will be used to prioritize the RFFs received. The DFPC will fund projects based on information provided in the submitted documentation, and funding availability.

Unfunded proposals may be resubmitted for consideration during future funding cycles.

Responsibilities:

DFPC

1. Call for proposals
2. Review proposals
3. Allocations of funds as soon as practical after all proposals are evaluated.

Applicant

1. Submit a complete request for funding
2. Complete and submit project status updates through the Area Office on a quarterly basis using the form in Exhibit 3:
 - a. January 15, April 15, July 15, and October 15.
3. The Applicant will provide a final report to the DFPC within 120 days after the project completion.

Projects funded through this program may also be nominated for a sustainability or “green” award.

National Environmental Policy Act Compliance (NEPA): In order to ensure compliance with NEPA and associated laws and regulations, the IHS must complete the NEPA process for each Green Infrastructure project that is awarded. The cost for this task should be reflected in the cost estimate and Return on Investment calculation.

After award and prior to construction, IHS staff shall complete the Environmental Information and Documentation (EID) form and all associated processes in accordance with GAM 30 and the IHS Environmental Review Manual. In some cases, it is possible that an Environmental Assessment and Finding of No Significant Impact could be required, but in most cases Categorical Exclusion I.3, for building alteration and renovation (58 FR 569 – 572), would likely apply as long as no extraordinary or exceptional circumstances applied. Refer to the Area NEPA Coordinator with any questions.

Health Care Facilities Construction (HCFC)
Green Infrastructure Project Guidelines

Final reports: The applicant that requested the funds is responsible for preparing and submitting an electronic copy of the completed final report to the DFPC via their respective Area Office. All final reports shall have the same approval sequence as the funding request.

The report should include a brief statement about the project scope and expectations, benefits and challenges of the project, indicate the estimated and actual savings, a revised simple payback calculation, recommendations for future projects of a similar type. These reports will provide IHS with information regarding viability of these new methods and technologies, and are an essential part of this program, which provides benefit to the IHS. For projects improving federally owned buildings the Final Report should follow Volume III, Part 24-8 of the OEHE Technical Handbook.

Unused Funds: Unexpended funds greater than \$5,000 will be returned to IHS Headquarters. For example, if the DFPC awarded \$125,000 for sustainability activities and the applicant completed all required work for \$97,000, then the DFPC would initiate a request to recall the remaining \$28,000.

Contact: For questions and additional information, contact Mr. Jim White, (office: 405-808-7133 or jim.white@ihs.gov) Manager of the Green Infrastructure Program.

Health Care Facilities Construction (HCFC)

Green Infrastructure Project Guidelines

Exhibit 1 Request for Funding Rating Elements

Element	Score Range	Description
Return on Investment	15 – 20	Potential return on investment is high by either eliminating economic losses or enhancing economic gains resulting from implementation of corrective actions. Examples include actions with monetary payback in three years or less.
	9 – 14	Potential return on investment is moderate by either eliminating economic losses or enhancing economic gains resulting from implementation of corrective actions. Examples include actions with monetary payback between three and 10 years.
	1 – 8	Potential return on investment is low by either eliminating economic losses or enhancing economic gains resulting from implementation of corrective actions. Examples include actions with monetary payback greater than 10 but less than 20 years. The case for benefits is based mostly on subjective arguments and/or the potential for benefits is low. *NOTE: ROI of 20 or more years may be scored 0 points.
Requirements Compliance	20	Project brings building into compliance with the Guiding Principles. This equates to a score of 420 or more points on the Existing Building Assessment Tool.
	8 – 15	Addresses more than one of the sustainability-related requirements AND significantly increases the Existing Building Assessment Tool score.
	1 – 7	Addresses at least one of the sustainability-related requirements as listed in the Purpose section of this chapter increases the Existing Building Assessment Tool score.
Energy Use	16 – 20	Achieves an energy consumption reduction of greater than 20 percent from current consumption, or implementation of renewable energy technologies that generate greater than 20 percent of the installation's energy requirements.
	11 – 15	Achieves an energy consumption reduction of greater than 10 percent from current consumption, or implementation of renewable energy technologies that generate greater than 10 percent of the installation's energy requirements.
	6 – 10	Achieves an energy consumption reduction of 7.5 to 10 percent from current consumption, or implementation of renewable energy technologies that generate 2.5 to 5 percent of the installation's energy requirements.
	1 – 5	Achieves an energy consumption reduction up to 7.5 percent, or implementation of renewable energy technologies that generate up to 2.5 percent of the installation's energy requirements. The case for benefits is based mostly on subjective arguments and/or the potential for benefits is low.
Water Use	11 – 15	Achieves an indoor potable water consumption reduction of greater than 10 percent from current consumption, and/or achieves an outdoor potable water consumption reduction of greater than 50 percent. Installation of an advanced water meter where one did not previously exist is worth 5 points.
	6 – 10	Achieves an indoor potable water consumption reduction of 5 to 7.5 percent from current consumption, and/or achieves an outdoor potable

Health Care Facilities Construction (HCFC)**Green Infrastructure Project Guidelines**

		water consumption reduction of 20-50 percent. Installation of an advanced water meter where one did not exist is worth 5 points.
	1 – 5	Achieves an indoor potable water consumption reduction of less than 5 percent from current consumption, and/or achieves an outdoor potable water consumption reduction of less than 5 percent. The case for benefits is based mostly on subjective arguments and/or the potential for benefits is low. Installation of an advanced water meter where one did not exist is worth 5 points.
Enhance Indoor Environmental Quality	1 – 10	Up to 5 points for sustainability projects that Enhance Indoor Environmental Quality. Up to 5 points for projects that address the Environmental Impact of Materials sections of the Existing Building Assessment Tool.

These funds can augment a capital construction project incorporating any of the Rating Elements listed in Exhibit 1 above.

Exhibit II.C.1 Existing Building Assessment Tool

BUILDING NAME	LOCATION	DATE OF ASSESSMENT
PREPARED BY	SQUARE FOOTAGE (specify gsf or usf): gsf usf	
MISSION DEPENDENCY Mission Critical Mission Dependent Not Mission Dependent		
COMMISSIONING/RECOMMISSIONING Completed Date Not completed Not Applicable		
ASSESSMENT REPORT ATTACHED? Yes No <i>The Assessment Report should include a comprehensive list of the building's strengths, weaknesses and deficiencies; a prioritized list of deficiencies that can be addressed by minor alterations or repairs (considering payback over the life cycle); and a status summary indicating whether a major renovation or replacement of the facility (and estimated time frame) is recommended by the assessment team.</i>		

A. ENERGY PERFORMANCE

Energy Efficiency

Establish a whole building performance target that takes into account the intended use, occupancy, operations, and other energy demands. Establish a baseline building performance rating per the American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., (ASHRAE) and the Illuminating Engineering Society of North America (IESNA) Standard 90.1-2007, Energy Standard for Buildings Except Low-Rise Residential Buildings.

Reduce Energy Usage Intensity (EUI) by 20% below 2003 baseline, or receive a score of 75 or higher in Energy Star Portfolio Manager (ESPM).

Establish an energy usage baseline using historic data (2003 EUI)
OR
Establish an energy usage baseline using ASHRAE/IESNA 90.1-2007
OR
Evaluate using Energy Star Portfolio Manager
An Energy Conservation Plan has been developed
Reduction in EUI of > 5%

Reduction in EUI of > 10%
Reduction in EUI of > 15%
OR
Achieved a score of 69 or higher in ESPM or equivalent Labs21 Benchmarking Tool score for laboratory buildings.
Reduction in EUI of > 20%,
OR
Achieved a score of 75 or higher in ESPM or equivalent Labs21 Benchmarking Tool score for laboratory buildings.

Score

Measurement & Verification

Building level metering installed for electricity, and where required by OPDIV energy plan advanced metering
Electrical meter performance data collected, compiled and used to evaluate Energy Projects
Building level metering installed for utilities defined in EO 13423, EAct 2005 and EISA 2007, and where required by OPDIV energy plan advanced metering

All utility meter performance data collected compiled and used to evaluate Energy Projects performance.
Data entered in Energy Star Portfolio Manager
Data entered in High Performance Buildings Database

(continued on next page)

D. ENVIRONMENTAL IMPACT OF MATERIALS**Recycled Content**

For EPA-designated materials used in operation and maintenance of the building, and new furnishings, use products that meet or exceed EPA's recycled content recommendations

No EPA designated materials used in the building meet recycled content recommendations.

Less than half of the EPA designated materials meet or exceed recycled content recommendations.

Half of the EPA designated materials meet or exceed recycled content recommendations.

More than half of the EPA designated materials meet or exceed recycled content recommendations.

All EPA designated materials meet or exceed recycled content recommendations, or no EPA designated materials are used in the building.

Score

For materials used in operation and maintenance of the building and furnishings that are not EPA designated materials, the recycled content is such that the sum of post-consumer recycled content plus one-half of the pre-consumer content constitutes at least 10% (based on cost) of the total value of the materials used in the building.

No non-designated materials used in the building have recycled content.

Recycled content of non-designated materials used is less than 5% based on total values of materials used in the building.

Recycled content of non-designated materials used is about 5% based on total values of materials used in the building.

Recycled content of non-designated materials used is 5- 10% based on total values of materials used in the building.

Recycled content of non-designated materials meets or exceeds 10% based on total values of materials used in the building.

Score**BioBased Content**

For USDA-designated materials used in operation and maintenance of the building and new furnishings, use products meeting or exceeding USDA's biobased content recommendations.

No USDA-designated materials meet biobased content recommendations.

Designated materials have some biobased content but less than 50% of recommended amount.

Biobased content of designated materials is 50% of recommended amount.

Designated materials have biobased content greater than 50% of recommended amount.

All USDA-designated materials used in the building meet or exceed biobased content recommendations, or no designated materials will be used in the building

Score

For other materials used in operation and maintenance of the building and new furnishings, use biobased products made from rapidly renewable resources and certified sustainable wood products.

No biobased products made from rapidly renewable resources or certified sustainable wood products are used.

Some non-designated biobased products made from rapidly renewable resources or certified sustainable wood products are used but renewable or certified products will be less than 50%.

About 50% of the non-designated biobased products used are made from rapidly renewable resources or certified sustainable wood.

More than 50% of the non-designated biobased products used in the building are made from rapidly renewable resources or certified sustainable wood.

For non-designated materials used in the building, all biobased products are made from rapidly renewable resources and certified sustainable wood products, or no materials used in the building can be made from biobased products.

Payback	
Potential payback for improvements over the remaining life cycle or lease	
<p>Payback period is greater than the remaining useful life of the building, or 10 years based on Life Cycle Cost (LCC) of the improvements</p> <p>Payback period is 7 to 10 yrs based on LCC of the improvements</p> <p>Payback period is 5 to 7 yrs based on LCC of the improvements</p>	<p>Payback period is 3 to 5 yrs based on LCC of the improvements</p> <p>Payback period is 1 to 3 yrs based on LCC of the improvements</p> <p>50 Payback period is less than 1 yr based on LCC of the improvements</p>
Score	
F. CONFORMANCE WITH LOCAL ENVIRONMENTAL REQUIREMENTS	
Environmental Regulations	
Facility/Building is in compliance with all applicable federal, state and local environmental regulations (e.g., compliance with fuel storage tanks system, air emissions such as boilers and emergency generators, illicit discharges to storm and/or sanitary sewer, NPDES and Sanitary Discharge permits)	
<p>Facility/building management has NOT established procedures for an environmental compliance program through the facility/organization's EMS as required by Executive Order 13423</p> <p>Facility/building management has established an environmental compliance program through the facility/organization's EMS that includes</p> <p>(a) procedures to identify and account for applicable legal and other requirements,</p> <p>(b) protocols to periodically evaluate compliance with those applicable legal, and</p> <p>(c) a system for implementing corrective action</p>	<p>Facility/building management met criteria in Column B AND has conducted evaluations of compliance with applicable legal and other requirements. The facility/organization has not completed the evaluations for all of the facility/organization, or has not initiated corrective actions.</p> <p>Facility/building management criteria in Column B and C AND has completed evaluations of compliance with applicable legal and other requirements for the entire facility/building. Corrective actions have been initiated or have been scheduled (as appropriate considering technical and budgetary constraints).</p> <p>50 Facility/Building is in full compliance with all applicable federal, state and local environmental regulations</p>
Score	
Environmental Management System (EMS)	
Executive Order (EO) 13148 required all Federal Agencies to determine 'appropriate' facilities for implementing EMS.	
EO 13423 requires that EMSs serve as the primary mechanism for achieving compliance with all aspects of the order.	
<p>Facility/building management has not established requirements/procedures to address applicable sustainable practices as required by Executive Order 13423 through the facility/organization's EMS.</p> <p>Facility/building management has established requirements/procedures to address applicable sustainable practices as required by Executive Order 13423 through the facility/organization's EMS, including procedures for setting objectives and target as appropriate, monitoring, training, and management review, but has not implemented the requirements/procedures</p>	<p>Facility/building management has met all the criteria in Column B, AND</p> <p>has incorporated at least one of the applicable sustainable practices through the EMS, AND</p> <p>the facility/organization has established an implementation schedule to complete incorporation of the remainder of the applicable sustainable practices through the EMS.</p> <p>50 Facility/building management has met all the criteria in Column B and C AND</p> <p>Facility/organization has verified conformance and performance through monitoring and management review OR</p> <p>Facility/Building in not included in the HHS 'appropriate' facility list and is not required to have an EMS</p>
Score	
<p>¹ www1.eere.energy.gov/femp/water_fedrequire.html</p> <p>² 1992 Energy Policy Act fixture performance requirements: showerheads: 2.5 gallons per minute at 80 psi; urinals: 1 gallon per flush; faucets: 2.2 gallons per minute at 60 psi; toilets: 1.6 gallons per flush</p>
