G. The funding formula for individual Tribal shares of all Headquarters funds12

H. Total amounts identified in the preceding fiscal years (FY 2015) for FY 2016 and (FY 2016) for FY 2017 to carry out functions that the IHS must carry out as an integral part of its duties as a Federal agency14

I. Comments on this report received from Indian Tribes and Tribal Organizations.....14

One Attachment:
Exhibit A – Funds Transferred to Each Self-Governance Tribe

Report to Congress on the Administration of the Tribal Self-Governance Program

A. Introduction

The Fiscal Year (FY) 2016 and FY 2017 Reports to Congress on the Administration of the Indian Health Service (IHS or Agency) Tribal Self-Governance Program are combined in this report and prepared as required in 25 U.S.C. § 5394 (previously codified as 25 U.S.C. § 458aaa-13) of the Indian Self-Determination and Education Assistance Act (ISDEAA), 25 U.S.C. § 5301 et seq. (previously codified as 25 U.S.C. § 450 et seq.). The report addresses the Agency's administration of the Tribal Self-Governance Program and provides an accounting of the level of need being funded for each Indian Tribe under Self-Governance compacts¹ and funding agreements² authorized under Title V of the ISDEAA. In FY 2016, approximately \$1.9 billion of the total IHS annual appropriation was transferred to Tribes and Tribal organizations under 89 ISDEAA self-governance compacts and 115 funding agreements.³ In FY 2017, approximately \$2 billion of the total IHS annual appropriation was transferred to Tribes and Tribal organizations under 94 ISDEAA self-governance compacts and 120 funding agreements.⁴

In 2016, the Spirit Lake Tribe, located in North Dakota (IHS Great Plains Area), and the Tohono O'odham Nation, located in Arizona (IHS Tucson Area), entered into the IHS Tribal Self-Governance Program, which was especially memorable as these two IHS Areas previously did not have any tribes participating in the Tribal Self-Governance Program. Consequently, all 12 IHS Areas now have Tribes participating in the Tribal Self-Governance Program. In 2017, five more Tribes entered into the IHS Tribal Self-Governance Program: (1) the Fort McDermitt Paiute and Shoshone Tribe, located on the borders of Nevada and Oregon; (2) the Quapaw Tribe of Oklahoma; (3) the Seminole Nation of Oklahoma; (4) the Salt River Pima-Maricopa Indian Community, located in Arizona; and (5) the Ho-Chunk Nation, located in Wisconsin.

¹ A "Self-Governance compact" is a legally binding and mutually enforceable written agreement that affirms the Government-to-Government relationship between a Self-Governance Tribe and the United States. A compact shall include general terms setting forth the Government-to-Government relationship, including such terms as the parties intend to control year after year. It is negotiated in a manner consistent with the Federal Government's trust responsibility and treaty obligations, and the Government-to-Government relationship between Indian Tribes and the United States. 25 U.S.C. § 5384 (previously codified as 25 U.S.C. § 458aaa-3); 42 C.F.R. §§ 137.30-31.

² A "funding agreement" is a legally binding and mutually enforceable written agreement that identifies the programs, services, functions, or activities (PSFAs), or portions thereof, that the Self-Governance Tribe will carry out, the funds being transferred from service unit, Area, and/or Headquarters levels in support of those PSFAs, and such other terms as are required or may be agreed upon pursuant to Title V. 25 U.S.C. § 5385 (previously codified as 25 U.S.C. § 458aaa-4); 42 C.F.R. § 137.40.

⁴ Department of Health and Human Services (2019). Self-Governance. *Department of Health and Human Services, Fiscal Year 2019. Indian Health Service: Justification of Estimates for Appropriations Committees*. Retrieved from <https://www.ihs.gov/budgetformulation/congressionaljustifications/>

B. Background

Title V of the ISDEAA allows Tribes to assume operation of certain IHS programs and to receive not less than the amount that the Secretary, Department of Health and Human Services (HHS) (Secretary), would have otherwise provided for the direct operation of the programs for the period covered by the contract. Approximately one-third of the Agency's annual appropriation is compacted through Title V of the ISDEAA.

The following are specific elements of the annual report as required by statute [25 U.S.C. § 5394 (previously codified as 25 U.S.C. § 458aaa-13(b))]:

- The relative costs and benefits of Self-Governance;
- Funds specifically or functionally related to the provision by the Secretary of services and benefits to Self-Governance participants;
- Funds transferred to each Self-Governance Indian Tribe and the corresponding reduction in the Federal bureaucracy;
- The funding formula for individual Tribal shares of all Headquarters funds;
- Amounts expended in the preceding FY to carry out inherent Federal functions⁵ by type and location; and
- Comments on this report received from Indian Tribes and Tribal Organizations.

This report has been compiled using information contained in funding agreements, annual audit reports, and data from the Secretary regarding the disposition of Federal funds. No reporting requirements have been imposed on participating Indian Tribes or Tribal Organizations related to this report, as required by 25 U.S.C. § 5394(a)(2) (previously codified as § 458aaa-13(a)(2)) of the ISDEAA.

C. Linkage with other reports to Congress

*The Indian Health Service Fiscal Year (FY) 2016-2017 Report to Congress on Contract Funding of Indian Self-Determination and Education Assistance Act Awards (Includes Fiscal Year 2016-2017 Data).*⁶

⁵ The Office of Management Budget (OMB) defines "inherently governmental function" as "a function that is so intimately related to the public interest as to require performance by Federal Government employees" *OMB; Publication of the Office of Federal Procurement Policy (OFPP) Policy Letter 11-01, Performance of Inherently Governmental and Critical Functions*, 76 Federal Register 56227, issued on Sept. 12, 2011. Pursuant to the ISDEAA, inherent Federal functions are those functions that cannot legally be delegated to Tribes and Tribal Organizations, and are the inherent responsibility of the Federal Government. Inherent Federal functions can be located at the service unit, Area, and/or Headquarters level of the IHS. The following non-exhaustive list of examples are functions within the exclusive province of the Agency: determination of Secretarial policy; the formulation of the President's budget; the direction and control of Federal employees; real property management; Federal procurement activities; the conduct of administrative hearings and appeals; and resource allocation.

⁶ IHS (2022). Fiscal Year 2016 and 2017 Report to Congress on Contract Funding of Indian Self-Determination and Education Assistance Act Awards. Retrieved from https://www.ihs.gov/sites/newsroom/themes/responsive2017/display_objects/documents/ReportToCongress_FY16FY17ISDEAA.pdf

D. The relative costs and benefits of Self-Governance

The Tribal Self-Governance Program strengthens the Nation-to-Nation relationship between the United States and Indian Tribes by enabling each Indian Tribe to choose the extent of its participation in Self-Governance and by transferring full control and funding of certain IHS programs, services, functions, or activities (PSFAs), or portions thereof, to Tribal Governments.

Under Title V of the ISDEAA, Tribes have the discretion to plan, conduct, redesign, and administer PSFAs, or portions thereof, that they have assumed. As a result, significant variation exists among tribally administered health programs. These benefits can include:

- Creation of a comprehensive approach to health services;
- Increased community engagement;
- Program design driven by the needs and priorities of each Tribal community;
- Improvement in communication and coordination between Tribal programs, resulting in the elimination of service duplication and improved efficiency;
- The ability to leverage Self-Governance funding, maximize resources, and provide more comprehensive community-wide services; and
- Development of innovative health programs and services.

The costs associated with the Tribal Self-Governance Program are detailed in section E, “*Funds related to the provision of services and benefits to Self-Governance Tribes.*”

Some examples of successful and innovative Tribal Self-Governance health programs include:

The Citizen Potawatomi Nation Health Services (CPNHS). The CPNHS administered and operated by the Citizen Potawatomi Nation (CPN) is one such example of a successful and innovative Tribal Self-Governance health program, located in Shawnee, Oklahoma. The CPNHS utilizes a comprehensive approach to healthcare, providing: high quality, evidence-based, culturally-suitable primary medical care, optometry services, physical therapy, dental services, public health services, pharmacy, behavioral health and substance abuse counseling and services, and a wellness center focused on preventive services to members of CPN and other Federally recognized American Indian Tribes. The CPNHS also provides ultrasound service, mammography, and Joslin Vision Network (JVN) retinal imaging. Additionally, in 2016, CPNHS reported it was building a Diagnostic Imaging/Specialty Services Clinic, to be equipped with Computed Tomography (CT) scan, Magnetic Resonance Imaging (MRI) and extra exam rooms for specialty providers. CPNHS employs approximately 210 employees and contractors.

Focusing on the goal of expanding medical care for their community, the CPNHS’ user population almost doubled in FY 2016 (11,106 total patients with a visit), as compared to FY 2012 (6,027 total patients with a visit). Additionally, the total number of visits increased by two-fold in FY 2016 (147,306 total number of patient visits), when compared to FY 2012 (72,859 total number of patient visits). The CPNHS’ innovative Insurance Sponsorship Project was very successful in FY 2016, enrolling 125 patients. While premiums increased drastically in 2016, the CPNHS returns on investment came out ahead at \$7.71 per \$1.00 invested, taking into consideration revenue collected and Purchased/Referred Care (PRC) dollars saved. For

example, reimbursement by third party payers for services provided to CPNHS patients and clients increased by almost \$2 million in FY 2016 (collections from all sources in FY 2016 totaled \$6,862,467) from FY 2015.⁷

The Fond du Lac Band of Lake Superior Chippewa (hereafter referred to as Fond du Lac Band). The Fond du Lac Band with approximately 4,200 Tribal members, has also developed an innovative and successful Self-Governance health program, in Minnesota. In 2013, the Fond du Lac Band's Tribal Council approved a Tribal Sponsorship program called FDL Total Coverage mostly for people under 300 percent of the federal poverty level (FPL)⁸ who enrolled in MNsure, the marketplace set up by Minnesota under the Patient Protection and Affordable Care Act (ACA) of 2010 (Pub. Law 111-148). Minnesota is the only state to have Medicaid, including Medicaid Expansion, as authorized under ACA, and a Basic Health Plan (called MinnesotaCare). With approximately 500 new enrollees in Medicaid and careful attention to billing, FDL's income from Medicaid increased by \$1.62 million in 2014, an increase of 11 percent over the previous year. After the first enrollment period, less than 10 percent of the Tribe's 7,309 user population remained uninsured. During the second year open enrollment period, FDL staff focused on re-enrolling people and reducing the list of uninsured.⁹

The Indian Health Care Improvement Act, reauthorized under ACA, specifically authorizes that Tribes may use funds made available under ISDEAA to purchase health insurance, such as coverage through a Marketplace, for IHS beneficiaries. A Tribal Sponsorship program provides Self-Governance Tribes with an opportunity to expand access to healthcare for Tribal members, as well as increased resources available to the Tribal health program. For those formerly uninsured IHS beneficiaries who now have insurance under the Marketplace, Tribes can reduce expenditures for services authorized through PRC by accessing substantial Federal premium and cost-sharing assistance provided through the Marketplace.¹⁰

The Chickasaw Nation Medical Center (CNMC). The CNMC, located in Ada, Oklahoma, is another example where a Self-Governance Tribe has developed an innovative health program and maximized resources to provide more comprehensive community-wide services. The Chickasaw Nation's Department of Health provides services to approximately 31,000 Chickasaw

⁷Citizen Potawatomi Nation Health Services (2016). Citizen Potawatomi Nation Health Services Annual Report FY 2016 (10/01/15-09/30/16). The CPNHS submitted the report to IHS in 2016.

⁸ The Tribal Sponsorship programs are permitted, but not required, to purchase coverage based upon the financial needs of the IHS beneficiaries. See 25 U.S.C. § 1642(b) (found on the Internet at: <https://www.gpo.gov/fdsys/pkg/USCODE-2015-title25/pdf/USCODE-2015-title25-chap18-subchapIII-A-sec1642.pdf>), and the CMS guidance letter dated February 7, 2014 (found on the Internet at: <https://www.cms.gov/CCIIO/Resources/Regulations-and-Guidance/Downloads/2015-final-issuer-letter-3-14-2014.pdf>).

Nation tribal members.¹¹ The IHS reports a service population of 41,414, including individuals of other tribal affiliations, for the Ada Service Unit in 2016.

The CNMC developed best practices in tobacco treatment to promote healthier lifestyles and address tobacco-related illness and disease, among Native and non-Native populations. In 2016, the Centers for Disease Control and Prevention (CDC) reported that 33.9 percent of American Indians and Alaska Native people consume tobacco.¹² According to the 2014 Oklahoma State's Health Report, tobacco related illness and disease kills over 6,000 Oklahomans, and is Oklahoma's leading cause of preventable death, costing the state \$1.16 billion in health care costs annually. The CNMC facility adopted best practices in tobacco treatment as recommended by the Oklahoma Hospital Association (OHA), Tobacco Settlement Endowment Trust and Joint Commission. The tobacco treatment assistance ranges from therapy to interactions with a "quit coach" and tobacco cessation classes. In 2014, the CNMC partnered with OHA to offer the nicotine replacement therapy program to patients who wish to quit using tobacco products.¹³

In 2016, the CNMC reported they were having tremendous success referring patients to receive services from the Oklahoma Tobacco Helpline, which greatly increases a patient's chances of successfully quitting. Patients referred by their inpatient or outpatient health providers are contacted by the 1-800-Quit-Now hotline for counseling support and over-the-counter medications to improve their chances of success. The Chickasaw Nation reported that over 1,000 individuals received assistance from the Oklahoma Tobacco Helpline after being referred by the CNMC. The CNMC was also the first health system in Oklahoma, and among a handful of hospitals in the nation, to fully integrate clinical tobacco treatment into its electronic health records system.¹⁴

Village of Kivalina. Completed in 2016, the Portable Alternative Sanitation System (PASS) demonstration project, a non-piped in-home sanitation system, was designed and retrofitted into nine homes to address immediate water and sanitation needs in the village of Kivalina, in northwest Alaska. Kivalina's PASS demonstration project is an example of increased community engagement, program design driven by the needs and priorities of a Tribal community, and the development of innovative health programs and services. The PASS demonstration project was a collaboration between the Tribal and city councils of Kivalina, the Alaska Native Tribal Health Consortium (ANTHC), the Cold Climate Housing Research Center, the Northwest Arctic Borough, and the IHS.

According to the State of Alaska, the majority of the more than 3,000 rural Alaska homes that lack running water and flush toilets are located in 30 'unserved' Alaska Native villages, and many of the homes and villages with in-home water and sewage services rely upon "deteriorating

¹¹ Chickasaw Nation Department of Health (August 19, 2020). Information provided by Chickasaw Nation Department of Health staff via email communique.

¹⁴*Ibid.*

piped and haul systems”.¹⁵ Insufficient in-home water and sewage service in rural Alaska can result in numerous health issues, such as, respiratory illnesses (e.g., influenza and pneumonia), infectious disease (e.g., COVID) and severe skin infections.

Due to the lack of running water and flush toilets, many of Kivalina’s approximately 442 residents¹⁶ need to haul clean water from melted ice, rainwater catchments, or rivers to their homes, and dispose of waste from a honey bucket (a plastic lined bucket that serves as a toilet) in a seepage pit or a landfill area.¹⁷ Kivalina is situated at the tip of an eight mile barrier reef island in the Chukchi Sea, which is susceptible to ongoing flooding, wind driven ice, and erosion. Plans are in place to relocate the village to an area 2.5 miles away from its current location in the near future. Therefore, building a new water and wastewater system for the entire village of Kivalina is not an option. Also, once the relocation occurs, it will be costly to construct a new piped water and sanitation system, and could take years to build. Some of the benefits of the PASS demonstration project, include, that the units are:

- (1) low cost - Costing \$47,726 for installation in each home, and averaging \$30 in monthly operating fees for homeowners. Also, it takes less time to build the PASS units, than to build a piped sanitation system;
- (2) transportable - the PASS units can be moved to a new village site when a community relocates;¹⁸ and
- (3) increased accessibility to water – creating healthier and more sustainable communities.

Upon completion, the PASS demonstration project monitored and evaluated homeowner acceptance and health benefits, as well as feasibility to expand the PASS demonstration project to other homes in Kivalina and northern coastal communities. Initial results indicate that PASS has the potential to improve the quality of life and health for rural Alaska Natives living without in-home piped water systems. The ANTHC also emphasized the importance of “partnering with the community to ensure homeowner buy-in, to develop good rapport to facilitate successful user training and address the human factors”.¹⁹ With at least twelve other Alaska Native communities, comprised of more than 1,000 households, considering or advancing with relocation, as a consequence of erosion and flooding caused by climate change, the usability and need of PASS for these affected communities is underscored.²⁰

Cherokee Nation. The Cherokee Nation, with a Tribal membership over 370,000 world wide and 141,000 Cherokee Nation citizens residing in their service area, is located in northeastern Oklahoma, in a 9,000 square mile area that includes all or parts of 14 counties.²¹ The Cherokee

Nation's (CN) Diabetes Prevention Program, funded largely by an IHS Special Diabetes Program for Indians (SDPI) grant, has received national recognition as a successful evidence-based practice targeting and reducing type 2 diabetes.²² The prevalence of diagnosed diabetes is highest among American Indian and Alaska Native populations (14.7 percent), as compared to Hispanics (12.5 percent), African Americans (11.7 percent), Asians (9.2 percent) and Caucasians (7.5 percent).²³

The CN Diabetes Program operates under the umbrella of the CN Health Services, which administers the W.W. Hastings Hospital and eight health centers and provides treatment for approximately 10,000 diabetes patients per year.²⁴ The CN Health Services refers patients who are diagnosed with prediabetes, who have a high risk for prediabetes or a history of gestational prediabetes to the CN Diabetes Prevention Program. In 2017, to prevent diabetes, and mitigate other chronic illnesses, the CN Diabetes Prevention Program began offering weekly, biweekly, and monthly Healthy Native classes at nine sites, that encouraged participants to lose weight and provided weight loss tools.

Approximately 293 individuals who participated in the CN Diabetes Prevention Program and Healthy Native classes from 2017-2019 lost a total of nearly 1,300 pounds. Participants who completed the program experienced an average weight loss of 6.6 percent after a year. The CN Diabetes Prevention Program is at the forefront of diabetes prevention and has set a national precedent, serving as a model diabetes program for other Tribes, as well as non-Native organizations (e.g., YMCAs and hospitals) who want to offer similar preventative programs to address the diabetes epidemic.²⁵

E. Funds related to the provision of services and benefits to Self-Governance Tribes

The funds specifically or functionally related to the provision, by the Secretary, of services and benefits to Self-Governance participants include the IHS budget for administration of the Tribal Self-Governance Program and the funds available to the Secretary to provide services for each Indian Tribe (as reflected by the amount each Tribe in a Self-Governance funding agreement is eligible to receive) for FY 2016 and FY 2017, respectively.

Tucson	37,032
Total	\$1,487,348

(2) Corresponding reduction in the Federal bureaucracy

Tribes increased participation in the IHS Tribal Self-Governance Program resulted in an increased assumption of Tribal shares and reduced IHS staffing levels, as Tribes hired their own staff to work in Tribal operated facilities. However, a separate national trend analysis will need to be conducted, in the future, to capture the actual rate of reduction in Federal bureaucracy.

G. The funding formula for individual Tribal shares of all Headquarters funds

Tribes may elect to assume responsibility for PSFAs formerly administered by the IHS. A Tribe may negotiate a compact and funding agreement with the Secretary for its share of the funds associated with the PSFAs. The funds for each PSFA may be found in one or more budget line items.

(1) Funding formulas for individual Tribal shares of all Headquarters funds

(a) Tribal Size Adjustment Formula

The IHS transferred \$28,738 (Dollars in Thousands) in FY 2016 and \$33,796 (Dollars in Thousands) in FY 2017 to Self-Governance Tribes for their individual Tribal shares of all Headquarters funds. For most IHS Headquarters programs, eligible shares for each Tribe were determined using the Tribal Size Adjustment (TSA) formula developed in the mid-1990s. The amount calculated by the TSA formula was originally determined in proportion to the aggregate user population of each Tribe. A small supplemental amount was added for Tribes with fewer than 2,500 users in partial compensation for inefficiencies related to small size. The amount determined by the TSA formula is termed the Tribe's "base" Headquarters shares in subsequent years and is not increased or decreased based on fluctuations in user population. Over time, the base Tribal shares have been adjusted proportionately for inflation or in response to congressional action.²⁹

(b) Special program formulas

Some IHS programs determine Tribal shares based on special program formulas, including the following:

Purchased/Referred Care,³⁰ Fiscal Intermediary Formula

Using the Purchased/Referred Care (PRC) Fiscal Intermediary formula, IHS provided \$994 (Dollars in Thousands) in 2016 and \$1,009 (Dollars in Thousands) in 2017 to Self-Governance Tribes for the processing of PRC claims (health care purchased from non-IHS providers when the IHS beneficiary is eligible for PRC and the care is not reasonably accessible or available within the IHS system). The fiscal intermediary is an IHS contractor that calculates and pays the PRC claims according to applicable authorities.

Tribal Share = A x B

Where

A = Tribal percent of 1993 Total Claims

B = Current Fiscal Intermediary Expenditures

Office of Environmental Health and Engineering (OEHE), OEHE Support

Using the Office of Environmental Health and Engineering (OEHE) Environmental Health Services Support formula, \$959 (Dollars in Thousands) and \$1,102 (Dollars in Thousands) were provided to Self-Governance Tribes in FY 2016 and FY 2017, respectively.

²⁹ Indian Health Service (June 2002). *HEADQUARTERS, PROGRAMS, SERVICES, FUNCTIONS AND ACTIVITIES (PSFA Manual)*, Updated: June 2002, which is available online at https://www.ihs.gov/sites/selfgovernance/themes/responsive2017/display_objects/documents/2002-PSFA-Manual.pdf

³⁰ In January 2014, the Consolidated Appropriations Act of 2014 changed the name of the Contract Health Services program to the Purchased/Referred Care program.

Headquarters Program funds for OEHE Support are allocated to Tribes, when requested, based on each Tribe's pro-rata share of the applicable Area Facilities and Environmental Health Support workload.

H. Total amounts identified in the preceding fiscal year (FY 2015) for FY 2016 and (FY 2016) for FY 2017 to carry out functions that the IHS must carry out as an integral part of its duties as a Federal agency

- (1) In 2015, IHS Headquarters identified a Headquarters residual amount of \$ 29,720,509 million.
- (2) In 2016, IHS Headquarters identified a Headquarters residual amount of \$ 30,013,990 million.

I. Comments on this report received from Indian Tribes and Tribal Organizations
