

Your home may be connected to a community sewer service. If this is the case, it is important to keep your wastewater stream flowing smoothly. Refer to your as-built drawing to determine the location of the sewer service line and sewer clean-out connection.

It's helpful to know how to remove the clean-out cap. If you suspect that there is a clog from your home to the community sewer, you may be able to clear it by running water directly into the clean-out connection.

Other issues may be handled by or with the advice of a professional plumber. Make sure that nothing obstructs the service line or the clean-out, and do not drive posts or metal objects into the ground over these areas.
